Safety Assessment of Acryloyldimethyltaurate Polymers as Used in Cosmetics

Status: Final Report
Release Date: May 24, 2017
Panel Meeting Date: April 10-11, 2017

The 2017 Cosmetic Ingredient Review Expert Panel members are: Chair, Wilma F. Bergfeld, M.D., F.A.C.P.; Donald V. Belsito, M.D.; Ronald A. Hill, Ph.D.; Curtis D. Klaassen, Ph.D.; Daniel C. Liebler, Ph.D.; James G. Marks, Jr., M.D.; Ronald C. Shank, Ph.D.; Thomas J. Slaga, Ph.D.; and Paul W. Snyder, D.V.M., Ph.D. The CIR Director is Lillian J. Gill, D.P.A. This report was prepared by Lillian C. Becker, Scientific Analyst/Writer.
**ABSTRACT**

The Cosmetic Ingredient Review (CIR) Expert Panel (Panel) assessed the safety of 21 acryloyldimethyltaurate polymers as used in cosmetics. The reported functions of these ingredients include dispersing agent – nonsurfactant, emulsion stabilizers, opacifying agent, and viscosity increasing agent – aqueous. The Panel expressed concern about residual monomers and impurities including acrylamide, vinyl formamide, and methacrylamidolauroic acid monomers. They stressed that the cosmetics industry should continue to use current good manufacturing practices (cGMPs) to limit impurities. The Panel concluded that acryloyldimethyltaurate polymers are safe in cosmetics in the present practices of use and concentration described in this safety assessment.

**INTRODUCTION**

This is a review of published scientific literature and unpublished data provided by Industry relevant to assessing the safety of 21 acryloyldimethyltaurate polymers as used in cosmetics. This group of ingredients comprises homopolymers, copolymers, and crosslinked polymers, the monomers of which are at least partially composed of acryloyldimethyltaurate. According to the *International Cosmetic Ingredient Dictionary and Handbook*, the functions of these ingredients include dispersing agent – nonsurfactant, emulsion stabilizer, opacifying agent, and viscosity increasing agent – aqueous (Table 1). The ingredients in this safety assessment are:

- Acrylamide/Sodium Acryloyldimethyltaurate Copolymer
- Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer
- Ammonium Acryloyldimethyltaurate/Beheneth-25 Methacrylate Crosspolymer
- Ammonium Acryloyldimethyltaurate/Carboxyethyl Acrylate Crosspolymer
- Ammonium Acryloyldimethyltaurate/Laureth-7 Methacrylate Copolymer
- Ammonium Acryloyldimethyltaurate/Steareth-25 Methacrylate Crosspolymer
- Ammonium Acryloyldimethyltaurate/Steareth-8 Methacrylate Copolymer
- Ammonium Acryloyldimethyltaurate/Vinyl Formamide Copolymer
- Ammonium Polyacryloyldimethyl Taurate
- Dimethylacrylamide/Sodium Acryloyldimethyltaurate Crosspolymer
- HEA/Sodium Acryloyldimethyltaurate/Steareth-20 Methacrylate Copolymer
- Hydroxyethyl Acrylate/Sodium Acryloyldimethyl Taurate Copolymer
- Sodium Acrylate/Acryloyldimethyltaurate/Dimethylacrylamide Crosspolymer
- Sodium Acrylate/Sodium Acryloyldimethyl Taurate Copolymer
- Sodium Acrylate/Sodium Acryloyldimethyl Taurate Taurate/Acrylamide Copolymer
- Sodium Acryloyldimethyl Taurate/PEG-8 Diacrylate Crosspolymer
- Sodium Acryloyldimethyl Taurate/Acrylamide/VP Copolymer
- Sodium Acryloyldimethyltaurate/Methacrylamidolauroic Acid Copolymer
- Sodium Acryloyldimethyltaurate/VP Crosspolymer
- Sodium Polyacryloyldimethyl Taurate

The Panel has previously reviewed polymers that are similar to the acryloyldimethyltaurate polymers (Table 2). Some of the ingredients in this report are copolymers with acrylate monomers; the Panel has reviewed the polyacrylates, and other acrylate copolymers, and concluded that they are safe as used when formulated to be non-irritating. Some other ingredients in this report are copolymers with acrylamide monomers; polyacrylamides were found to be safe as used if the concentration of residual acrylamide monomers in formulation is not greater than 5 ppm, and Polyvinylpyrrolidone (PVP; another polymer with vinyl-type amide monomers) was found to be safe as used. The Panel has also previously reviewed components/monomers of the acryloyldimethyltaurate polymers. The alkyl taurate amides and taurate salts were found to be safe when formulated to be non-irritating.

**CHEMISTRY**

**Definition and Structure**

The acryloyldimethyltaurate polymers are composed of homopolymers, copolymers and crosslinked polymers, the monomers of which are at least partially composed of acryloyldimethyltaurate.

![Figure 1](image.png)

*Figure 1.* This monomer is common to all acryloyldimethyltaurate polymers, where M is a sodium cation or ammonium.
The definitions and structures of these acryloyldimethyltaurate polymers ingredients are presented in Table 1.

**Physical and Chemical Properties**

The characteristics of acryloyldimethyltaurate polymers may vary greatly with manufacturing methods. For instance, the fluidity, solubility, and swelling capacity of these polymers can be determined by the degree of polymerization and crosslinking. In other words, altering manufacturing conditions, such as temperature, reaction time, and/or stoichiometric ratios, may result in significantly different physical forms even when the same monomers are used (i.e., even included under one ingredient name). It is also possible that these polymers are manufactured *in situ* to produce hydrogels. Accordingly, only cosmetic ingredient-specific data on the chemical and physical properties (including the molecular weight) of these ingredients are useful, and the data cannot be assumed.

Ammonium Acryloyldimethyltaurate/Carboxyethyl Acrylate Crosspolymer and Ammonium Acryloyldimethyltaurate/VP Copolymer are reported to be white powders (Table 3).\(^6\)\(^7\)

Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer is reported to be white powders, at up to 27%.\(^8\)

Acryloyldimethyltaurate polymers are large (2000 µm; >1000 to >1,000,000 g/mol) molecules. None of the particle diameters of Ammonium Acryloyldimethyltaurate/VP Copolymer were >2000 µm, 97.2% were <2000 µm, 81.3% were <1000 µm, 11.8% were <200 µm, and 0.5% were <100 µm.\(^9\) For Ammonium Acryloyldimethyltaurate/Carboxyethyl Acrylate Crosspolymer, 90.8% of the particles were <100 µm and 84.5% were <10 µm, and had an overall median diameter of 2.8 µm.\(^9\) Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer is reported have a molecular weight of approximately 250,000 g/mol.\(^8\) The molecular weight of Sodium Polyacryloyldimethyl Taurate was reported to be >1,000,000 g/mol.\(^9\)

Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer, Hydroxyethyl Acrylate/Sodium Acryloyldimethyl Taurate Copolymer, and a Sodium Acrylate/Acryloyldimethyltaurate/Dimethylacrylamide Crosspolymer mixture were reported to be stable under normal environmental conditions.\(^10\)\(^12\) Under normal conditions of use in personal care products, Sodium Acrylate/Acryloyldimethyltaurate/Dimethylacrylamide Crosspolymer is not expected to degrade; however, it does have functional groups that can be hydrolyzed in the pH range of 4-9.\(^10\) Ammonium Acryloyldimethyltaurate/Carboxyethyl Acrylate Crosspolymer and Ammonium Acryloyldimethyltaurate/VP Copolymer were also reported to be stable under normal conditions, but may release ammonia under alkaline conditions.\(^6\)\(^7\)

**Method of Manufacture**

Information on the methods of manufacture of these ingredients was not found in the published literature and no unpublished data were submitted. However, it is likely that radical type polymerization is commonly used, as it is for polyacrylamide and other vinyl-type polymers. This type of synthesis begins with formaldehyde and acetylene, and proceeds through 2-butene-1,4-diol and γ-butyrolactone to α-pyrrolidone and N-vinyl-2-pyrrolidone (the monomer), which is then polymerized to form the polymer. Usually, the monomer is polymerized in water; however, commercial polymerization may be carried out in isopropyl alcohol. The alcoholic solution is subsequently wetted to an aqueous solution by steam distillation and then either spray or drum dried.\(^4\)\(^13\)\(^14\)

**Composition/Impurities**

One supplier reported that Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer is supplied as an aqueous solution containing 25% to 27% of the polymer and the preservative sodium methylparaben (0.2%).\(^8\) This polymer is also reported to be supplied as an aqueous solution at 24%.\(^12\)

Hydroxyethyl Acrylate/Sodium Acryloyldimethyl Taurate Copolymer is reported to be supplied in a trade name mixture at <60%; the lowest concentration is not specified.\(^11\)

Sodium Acrylate/Acryloyldimethyltaurate/Dimethylacrylamide Crosspolymer is reported to be supplied in a trade name mixture at <45%; the lowest concentration is not specified.\(^10\)

Ammonium Acryloyldimethyltaurate/Carboxyethyl Acrylate Crosspolymer was reported to be >90% pure; data on the remaining <10% was not provided.\(^7\)

Sodium Polyacryloyldimethyl Taurate is reported to contain <2000 ppm 2-acrylamido-2-methylpropane sulfonic acid (AMPS) and <10 ppm (detection limit) acrylamide.\(^9\)

**USE**

**Cosmetic**

The safety of the cosmetic ingredients included in this assessment is evaluated based on the data the Panel receives from the U.S. Food and Drug Administration (FDA) and the cosmetics Industry on the expected cosmetic use of ingredients. The FDA collects data from manufacturers on the use of individual ingredients in cosmetics by cosmetic product category in its Voluntary Cosmetic Registration Program (VCRP). Those data received from the cosmetic Industry are submitted in response to a survey conducted by the Personal Care Products Council (Council) of the maximum reported use concentrations by category.
According to VCRP data received from the FDA in 2017, Ammonium Acryloyldimethyltaurate/VP Copolymer was reported to be used in 584 formulations, including use in 524 leave-on products and 60 rinse-off products (Table 4). Hydroxyethyl Acrylate/Sodium Acryloyldimethyl Taurate Copolymer was reported to be used in 541 formulations, including use in 516 leave-on products, 22 rinse-off products, and 3 products used in the bath. Ingredients with the next highest reported frequency of use are Acrylamide/Sodium Acryloyldimethyltaurate Copolymer, with 227 uses (220 leave-on and 7 rinse-off products), Sodium Acrylate/Sodium Acryloyldimethyl Taurate Copolymer with 197 uses (190 leave-on and 7 rinse-off products), and Ammonium Polyacryloyldimethyl Taurate, with 187 uses (178 leave-on and 9 rinse-off products). All other ingredients are reported to be used in 56 or fewer cosmetic products.

The results of a concentration of use survey conducted by the Council in 2015 indicate Hydroxyethyl Acrylate/Sodium Acryloyldimethyl Taurate Copolymer has the highest reported maximum concentration of use; it is reported to be used at up to 4.3% in depilatories (rinse-off products) and up to 3.6% in eyeliner and eye shadow (leave-on products).

In some cases, reports of uses were received from the VCRP, but concentration of use data were not reported in the use concentration survey. For example, Sodium Acryloyldimethyltaurate/VP Crosspolymer is reported to be used in 8 cosmetic formulations, but no use concentrations were reported. In other cases, no uses were reported to the VCRP, but concentration of use data were reported by Industry; for example, Sodium Acryloyldimethyltaurate/Methacrylamidolauric Acid Copolymer had no reported uses in the VCRP, but concentrations of use (0.28%-0.35%) in product categories that result in dermal exposure were provided in the Industry survey. Therefore, it is assumed that there is at least one use in every cosmetic product category for which a concentration was reported.

The ingredients not in use, based on the data from both the VCRP and the Industry survey, are listed in Table 5. Several of these ingredients were reported to be used in products that are used around the eye (the highest maximum reported concentration is 3.6% for Hydroxyethyl Acrylate/Sodium Acryloyldimethyl Taurate Copolymer in eyeliners and eye shadow) and in products that come in contact with mucus membranes (the highest maximum reported concentration 2.4% Sodium Acrylate/Sodium Acryloyldimethyl Taurate Copolymer in the use category of other personal cleanliness products).

Ammonium Acryloyldimethyltaurate/VP Copolymer and Sodium Acrylate/Sodium Acryloyldimethyl Taurate Copolymer were each reported to be used in 1 baby product (no concentration of use was reported for either). Acrylamide/Sodium Acryloyldimethyltaurate Copolymer, Ammonium Polyacryloyldimethyl Taurate, Hydroxyethyl Acrylate/Sodium Acryloyldimethyl Taurate Copolymer, and Sodium Acrylate/Sodium Acryloyldimethyl Taurate Copolymer are reported to be used in powder products, in which the highest reported concentration of use was 0.7% Acrylamide/Sodium Acryloyldimethyltaurate Copolymer in face powders. Conservative estimates of inhalation exposures to respirable particles during the use of loose powder cosmetic products are 400-fold to 1000-fold less than protective regulatory and guidance limits for inert airborne respirable particles in the workplace. Additionally, some of the acryloyldimethyltaurate polymers are used in cosmetic sprays and could possibly be inhaled; for example, Dimethylacrylamide/Sodium Acryloyldimethyltaurate Crosspolymer is reported to be used at up to 3% in perfume. In practice, 95% to 99% of the droplets/particles released from cosmetic sprays have aerodynamic equivalent diameters >10 μm, with propellant sprays yielding a greater fraction of droplets/particles <10 μm compared with pump sprays. Therefore, most droplets/particles incidentally inhaled from cosmetic sprays would be deposited in the nasopharyngeal and thoracic regions of the respiratory tract and would not be respirable (i.e., they would not enter the lungs) to any appreciable amount.

The National Industrial Chemicals Notification and Assessment Scheme (NICNAS) of Australia concluded that there is low concern to public health when Ammonium Acryloyldimethyltaurate/Carboxyethyl Acrylate Crosspolymer is used in rinse-off cosmetics at ≤2% and when Ammonium Acryloyldimethyltaurate/VP Copolymer is used in cosmetics at 0.5% to 1.2% (the concentrations requested to be reviewed by the suppliers) based on toxicity and environmental data. NICNAS also concluded that Hydroxyethyl Acrylate/Sodium Acryloyldimethyl Taurate Copolymer is safe in cosmetics at <3% and that Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer is safe in cosmetics when used as a component of hair styling products for salon and home use at 1% to 2% (the concentrations requested by the suppliers) based on toxicity and environmental data.

Acrylamide/Sodium Acryloyldimethyltaurate Copolymer, Acrylamide/Sodium Acryloyldimethyltaurate/Acryl Acid Copolymer, Sodium Acrylate/Sodium Acryloyldimethyl Taurate/Acrylamide Copolymer, and Sodium Acryloyldimethyl Taurate/Acrylamide/VP Copolymer are restricted in Europe according to the European Union (EU) Annex III/66. The amount of residual acrylamide content is limited to 0.1 mg/kg in leave-on cosmetics used on the body and 0.5 mg/kg in other cosmetic products that are used on specific body parts (e.g., eye, face, and hand).

Non-Cosmetic

Acrylamide/Sodium Acryloyldimethyltaurate Copolymer may be used as a component of the uncoated or coated food-contact surface of paper and paperboard intended for use in producing, manufacturing, packing, processing, preparing, treating, packaging, transporting, or holding dry food not to exceed 0.015 weight percent of dry fiber. According to the EU regulations on labelling and packaging of substances and mixtures, if Ammonium Acryloyldimethyltaurate/Beheneth-25 Methacrylate Crosspolymer is present in a product in a non-stabilized form, the name of the substance is to be followed by the words "non-stabilized" on the label.

**TOXICOKINETICS**

Toxicokinetic data were not found in the published literature and no unpublished data were submitted.
**TOXICOLOGICAL STUDIES**

**Acute Toxicity**

Acute dermal and oral toxicity studies are summarized in Table 6.

**Dermal**

The acute dermal LD$_{50}$ for a solution containing Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer (24% in water) was reported to be $>5000$ mg/kg (1200 mg/kg Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer) in rats. The acute dermal LD$_{50}$ for Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer (25% to 27% solids in water) was reported to be $>5000$ mg/kg (1250 to 1350 mg/kg Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer) in rats.

**Oral**

The acute oral LD$_{50}$ for a solution containing Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer (24% in water) was reported to be $>5000$ mg/kg (>1200 mg/kg Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer) in rats. The acute oral LD$_{50}$ for Ammonium Acryloyldimethyltaurate/Carboxyethyl Acrylate Crosspolymer and Ammonium Acryloyldimethyltaurate/VP Copolymer was reported to be $>2000$ mg/kg in rats; the oral LD$_{50}$ for Hydroxyethyl Acrylate/Sodium Acryloyldimethyl Taurate Copolymer ($<$60%) in a trade name mixture was reported to be $>1200$ mg/kg. The acute oral LD$_{50}$ of Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer (25% to 27% solids in water) was reported to be $>5000$ mg/kg (1250 to $>1350$ mg/kg Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer) in rats.

**Short-Term to Chronic Toxicity**

Short-term, subchronic, and chronic toxicity data were not found in the published literature and no unpublished data were submitted.

**DEVELOPMENTAL AND REPRODUCTIVE TOXICITY (DART) STUDIES**

Developmental and reproductive toxicity data were not found in the published literature and no unpublished data were submitted.

**GENOTOXICITY STUDIES**

**In Vitro**

*In vitro* genotoxicity studies are summarized in Table 7.

Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer, Ammonium Acryloyldimethyltaurate/Carboxyethyl Acrylate Crosspolymer, Ammonium Acryloyldimethyltaurate/VP Copolymer, Hydroxyethyl Acrylate/Sodium Acryloyldimethyl Taurate Copolymer, and Sodium Acrylate/Acryloyldimethyltaurate/Dimethylacrylamide Crosspolymer were not mutagenic in bacterial reverse mutation assays using *Salmonella typhimurium* and *Escherichia coli*. Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer (25% to 27% solids in water) was not mutagenic in an Ames test at up to 5000 µg/plate (1250 to 1350 µg/plate).

**CARCINOGENICITY STUDIES**

Carcinogenicity data were not found in the published literature and no unpublished data were submitted.

**DERMAL IRRITATION AND SENSITIZATION STUDIES**

**Irritation**

**Animal**

Dermal irritation studies in rabbits are summarized in Table 8. Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer (24%), Ammonium Acryloyldimethyltaurate/Carboxyethyl Acrylate Crosspolymer (100%), and Ammonium Acryloyldimethyltaurate/VP Copolymer (assumed applied neat; concentration not specified) were slightly or not irritating to rabbit skin. A solution containing Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer (25% to 27% in water; applied neat) was not irritating to rabbit skin. An solution containing Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer (25% to 27% in water; applied neat) was not irritating to rat skin after 24 h of exposure.

**Human**

Hydroxyethyl Acrylate/Sodium Acryloyldimethyl Taurate Copolymer was reported to be non-irritating in a human irritation assay. No further details were provided.
Sensitization

Animal and human sensitization studies are summarized in Table 9.

**Animal**

Ammonium Acryloyldimethyltaurate/Carboxyethyl Acrylate Crosspolymer (25%) and Ammonium Acryloyldimethyltaurate/VP Copolymer (assumed applied neat, not specified) were not sensitizing to guinea pigs.6,7

**Human**

Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer (24%), Sodium Acrylate/ Acryloyldimethyltaurate/Dimethylacrylamide Crosspolymer (<2.25%), and Sodium Polyacryloyldimethyl Taurate (30% to 40%) were not sensitizing in human repeated insult patch tests (HRIPC).9,10,12 An aqueous solution containing Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer (25% to 27% solids in water; applied neat) was not sensitizing in an HRIPT.26

A trade name mixture containing Hydroxyethyl Acrylate/Sodium Acryloyldimethyl Taurate Copolymer (<60%; assumed administered neat, not specified) was not sensitizing in a human sensitization assay.11

**OCULAR IRRITATION STUDIES**

*In vitro* and animal ocular irritation studies are summarized in Table 10.

**In Vitro**

Hydroxyethyl Acrylate/Sodium Acryloyldimethyl Taurate Copolymer was not an ocular irritant in an unspecified *in vitro* assay.11 Sodium Acrylate/Acryloyldimethyltaurate/Dimethylacrylamide Crosspolymer (<2.25%) was not considered an eye irritant in a Hens Eggs Test-Chorioallantoic Membrane (HET-CAM) assay.10

**Animal**

In ocular irritation assays, Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer, Ammonium Acryloyldimethyltaurate/Carboxyethyl Acrylate Crosspolymer, and Ammonium Acryloyldimethyltaurate/VP Copolymer were not irritating or slightly irritating in rabbit eyes.6,7,12 A solution containing Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer (25% to 27% in water; applied neat) was not irritating, according to Organization for Economic Co-operation and Development Test Guideline (OECD TG) criteria, or minimally irritating, according to US EPA criteria, to rabbit eyes.26

**SUMMARY**

This is a review of published scientific literature and unpublished data provided by Industry for assessing the safety of 21 acryloyldimethyltaurate polymers as used in cosmetics. This group of ingredients is composed of homopolymers, copolymers, and crosslinked polymers, the monomers of which are at least partially composed of acryloyldimethyltaurate. The reported functions of these ingredients include dispersing agent – nonsurfactant, emulsion stabilizer, opacifying agent, and viscosity increasing agent – aqueous.

In a safety assessment of polyacrylamides, these ingredients were found to be safe as used if the concentration of residual acrylamide monomers in formulation is not greater than 5 ppm.

Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer is reported have a molecular weight of approximately 250,000 Da. None of the particles of Ammonium Acryloyldimethyltaurate/VP Copolymer were >2000 µm, 97.2% were <2000 µm, 81.3% were <1000 µm, 11.8% were <200 µm, and 0.5% were <100 µm. For Ammonium Acryloyldimethyltaurate/Carboxyethyl Acrylate Crosspolymer, 90.8% of the particles of were <100 µm and 84.5% were <10 µm, and had a median diameter of 2.8 µm. The molecular weight of Sodium Polycryacrylamidylmethyl Taurate was reported to be >1,000,000.

Ammonium Acryloyldimethyltaurate/Carboxyethyl Acrylate Crosspolymer was reported to be >90% pure. Sodium Polycryacrylamidylmethyl Taurate is reported to contain <2000 ppm AMPS and <10 ppm acrylamide.

According to VCRP data received from the FDA in 2017, Ammonium Acryloyldimethyltaurate/VP Copolymer was reported to be used in 584 formulations, including use in 524 leave-on products and 60 rinse-off products. Hydroxyethyl Acrylate/Sodium Acryloyldimethyl Taurate Copolymer was reported to be used in 541 formulations, including use in 516 leave-on products, 22 rinse-off products, and 3 products used in the bath. Ingredients with the next highest reported frequency of use are Acrylamide/Sodium Acryloyldimethyltaurate Copolymer, with 227 uses (220 leave-on and 7 rinse-off products), Sodium Acrylate/Sodium Acryloyldimethyl Taurate Copolymer with 197 uses (190 leave-on and 7 rinse-off products), and Ammonium Polycryacrylamidylmethyl Taurate, with 187 uses (178 leave-on and 9 rinse-off products). All other ingredients are reported to be used in 56 or fewer cosmetic products.

The results of a concentration of use survey conducted by the Council in 2015 indicate Hydroxyethyl Acrylate/ Sodium Acryloyldimethyl Taurate Copolymer has the highest reported maximum concentration of use; it is reported to be used at up to 4.3% in depilatories (a rinse-off product) and up to 3.6% in eyeliner and eye shadow (leave-on products).

The acute dermal LD50 for Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer was reported to
be >5000 mg/kg in rats. The acute dermal LD₅₀ for a product containing Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer (25% to 27%) was >5000 mg/kg (>1250 to >1350 mg/kg) in rats.

The acute dermal LD₅₀ for a solution containing Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer (24% in water) was reported to be >5000 mg/kg (>1200 mg/kg Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer) in rats. The acute oral LD₅₀ for a solution containing Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer (25% to 27%) was reported to be >5000 mg/kg (>1250 to >1350 mg/kg) in rats.

The acute oral LD₅₀ for a solution containing Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer (24% in water) was reported to be >5000 mg/kg (>1200 mg/kg Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer) in rats. The acute oral LD₅₀ for a solution containing Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer (25% to 27%) was reported to be >5000 mg/kg (>1250 to >1350 mg/kg) in rats.

The acute dermal LD₅₀ for a product containing Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer was >2000 mg/kg in rats; the oral LD₅₀ for Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer was >1000 mg/kg in rats; the oral LD₅₀ for Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer was >2000 mg/kg in rats; the oral LD₅₀ for Hydroxyethyl Acrylate/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer was >1200 mg/kg.

The acute oral LD₅₀ for a solution containing Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer (25% to 27%) was not irritant in a HET assay. Sodium Acrylate/Acryloyldimethyltaurate/Acrylic Acid Copolymer (up to 27%), Ammonium Acryloyldimethyltaurate/Carboxyethyl Acrylate Crosspolymer (100%), and Ammonium Acryloyldimethyltaurate/VP Copolymer (assumed applied neat, not specified) were slightly or not irritating to rabbit skin. A solution containing Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer was not irritating to rat skin.

In a Buehler test, Ammonium Acryloyldimethyltaurate/Carboxyethyl Acrylate Crosspolymer was not sensitizing to guinea pigs at 25%. Ammonium Acryloyldimethyltaurate/VP Copolymer (neat) was not sensitizing to guinea pigs.

Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer (25%-27%), Sodium Acrylate/ Acryloyldimethyltaurate/Dimethylacrylamide Crosspolymer (<2.25%), and Sodium Polycryloyldimethyl Taurate (30% to 40%) were not sensitizing in human repeated insult patch tests HRIPTs. Hydroxyethyl Acrylate/Sodium Acryloyldimethyltaurate was not sensitizing in a human sensitization assay. A product containing Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer (up to 27%) was not sensitizing in an HRIPT.

Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer (up to 27%), Sodium Acrylate/ Acryloyldimethyltaurate/Dimethylacrylamide Crosspolymer (<2.25%), and Sodium Polycryloyldimethyl Taurate (30% to 40%) were not sensitizing in human repeated insult patch tests HRIPTs. A trade name mixture containing Hydroxyethyl Acrylate/Sodium Acryloyldimethyltaurate Taurate (assumed administered neat, not specified) was not sensitizing in a human sensitization assay.

Hydroxyethyl Acrylate/Sodium Acryloyldimethyltaurate was not an ocular irritant in an unspecified in vitro assay. Sodium Acrylate/Dimethylacrylamide Crosspolymer (<2.25%) was not considered an eye irritant in a HET-CAM assay.

In ocular irritation assays Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer, Ammonium Acryloyldimethyltaurate/Carboxyethyl Acrylate Crosspolymer, and Ammonium Acryloyldimethyltaurate/VP Copolymer were not irritating or slightly irritating to rabbit eyes. A solution containing Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer was not irritating, according to OECD TG criteria, or minimally irritating, according to US EPA criteria, to rabbit eyes.

**DISCUSSION**

The Panel examined data on dermal and oral acute toxicity, genotoxicity, dermal and ocular irritation, and sensitization for the acryloyldimethyltaurate polymers. There were no studies that elicited concern. The Panel also considered composition and the physical and chemical properties of these polymers.

These ingredients are large molecules (2000 μm; >1000 to >1,000,000 g/mol) and should not be absorbed through the skin. This is consistent with the favorable safety profile in dermal and oral toxicity studies.

The Panel expressed concern about impurities, including residual monomers, because of potential sensitization or other deleterious effects that may occur due to exposure. Monomers of concern include acrylamide (in Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer), vinyl formamide (in Ammonium Acryloyldimethyltaurate/ Vinyl Formamide Copolymer), and methacrylamidolauryl acid (in Sodium Acryloyldimethyltaurate/Methacrylamidolauryl Acid Copolymer). The Panel agreed that it is appropriate to apply the limit of 5 ppm acrylamide imposed by the Panel in the safety assessment of Polycrylamide to finished products containing the ingredients in this safety assessment. They stressed that the cosmetics industry should continue to use cGMPs to limit impurities.

The Panel discussed the issue of incidental inhalation exposure from perfumes; tonics, dressings and other hair grooming aids; body and hand products; and face powders. There were no inhalation toxicity data available. These
ingredients are reportedly used at concentrations up to 3% in cosmetic products that may be aerosolized and up to 0.7% in loose powder products that may become airborne. The Panel noted that droplets/particles from cosmetic products would not be respirable to any appreciable amount. Furthermore, these ingredients are not likely to cause any direct toxic effects in the upper respiratory tract, based on the properties of the acryloyldimethyltaurate polymers and on data that shows that these ingredients are not irritants. Coupled with the small actual exposure in the breathing zone and the concentrations at which the ingredients are used, the available information indicates that incidental inhalation would not be a significant route of exposure that might lead to local respiratory or systemic effects. They noted the lack of irritation or sensitization in tests of dermal exposure, no systemic toxicity at 5000 mg/kg, the absence of genotoxicity in Ames tests, and the fact that these ingredients are large molecules, which supports the view that they are unlikely to be absorbed or cause local effects in the respiratory tract. A detailed discussion and summary of the Panel’s approach to evaluating incidental inhalation exposures to ingredients in cosmetic products is available at http://www.cir-safety.org/cir-findings.

**CONCLUSION**

The CIR Expert Panel concluded that the following ingredients are safe in cosmetics in the present practices of use and concentration described in this safety assessment:

- Acrylamide/Sodium Acryloyldimethyltaurate Copolymer
- Acrylamide/Sodium Acryloyldimethyltaurate/Acrylic Acid Copolymer*
- Ammonium Acryloyldimethyltaurate/Beheneth-25 Methacrylate Crosspolymer
- Ammonium Acryloyldimethyltaurate/Carboxyethyl Acrylate Crosspolymer
- Ammonium Acryloyldimethyltaurate/Laureth-7 Methacrylate Copolymer*
- Ammonium Acryloyldimethyltaurate/Steareth-25 Methacrylate Crosspolymer
- Ammonium Acryloyldimethyltaurate/Steareth-8 Methacrylate Copolymer
- Ammonium Acryloyldimethyltaurate/Vinyl Formamide Copolymer*
- Ammonium Acryloyldimethyltaurate/VP Copolymer
- Ammonium Polyacryloyldimethyl Taurate
- Dimethylacrylamide/Sodium Acryloyldimethyltaurate Crosspolymer
- HEA/Sodium Acryloyldimethyltaurate/Steareth-20 Methacrylate Copolymer
- Hydroxyethyl Acrylate/Sodium Acryloyldimethyl Taurate Copolymer
- Sodium Acrylate/Acryloyldimethyltaurate/Dimethylacrylamide Crosspolymer
- Sodium Acrylate/Sodium Acryloyldimethyl Taurate Copolymer
- Sodium Acrylate/Sodium Acryloyldimethyl Taurate/Acrylamide Copolymer
- Sodium Acryloyl Dimethyl Taurate/PEG-8 Diacrylate Crosspolymer*
- Sodium Acryloyldimethyl Taurate/Acrylamide/VP Copolymer
- Sodium Acryloyldimethyltaurate/Methacrylamidolauric Acid Copolymer
- Sodium Acryloyldimethyltaurate/VP Crosspolymer
- Sodium Polyacryloyldimethyl Taurate

* Were ingredients in this group not in current use to be used in the future, the expectation is that they would be used in product categories and at concentrations comparable to others in the group.

NR = Not Reported; Totals = Rinse-off + Leave-on Product Uses.
\(^a\) Because each ingredient may be used in cosmetics with multiple exposure types, the sum of all exposure types may not equal the sum of total uses.
\(^b\) It is possible these products may be sprays, but it is not specified whether the reported uses are sprays.
\(^c\) Not specified whether a powder or a spray, so this information is captured for both categories of incidental inhalation.
\(^d\) It is possible these products may be powders, but it is not specified whether the reported uses are powders.
\(^e\) Not sprays.
