Safety Assessment of Polyglyceryl Fatty Acid Esters as Used in Cosmetics

Status:	Final Report
Release Date:	November 14, 2016
Panel Meeting Date:	September 26-27, 2016

The 2016 Cosmetic Ingredient Review Expert Panel members are: Chairman, Wilma F. Bergfeld, M.D., F.A.C.P.; Donald V. Belsito, M.D.; Ronald A. Hill, Ph.D.; Curtis D. Klaassen, Ph.D.; Daniel C. Liebler, Ph.D.; James G. Marks, Jr., M.D., Ronald C. Shank, Ph.D.; Thomas J. Slaga, Ph.D.; and Paul W. Snyder, D.V.M., Ph.D. The CIR Director is Lillian J. Gill, D.P.A. This safety assessment was prepared by Monice M. Fiume, Assistant Director/Senior Scientific Analyst/Writer and Bart Heldreth, Ph.D., Chemist.

ABSTRACT

The Cosmetic Ingredient Review (CIR) Expert Panel (Panel) assessed the safety of 274 polyglyceryl fatty acid esters. Each of the esters in this group is a polyether comprising 2 to 20 glyceryl residues, end-capped by esterification with simple carboxylic acids, such as fatty acids. Most of these ingredients are reported to function in cosmetics as skin-conditioning agents and/or surfactants. The Panel reviewed the available data and considered conclusions from relevant previous CIR reports, and determined that these ingredients are safe in cosmetics in the present practices of use and concentration described in this safety assessment when formulated to be non-irritating.

INTRODUCTION

This is a safety assessment of the polyglyceryl fatty acid esters as used in cosmetic formulations. Each of the esters in this report is a polyether comprising 2 to 20 glyceryl residues, end-capped by esterification with simple carboxylic acids, such as fatty acids. The 274 ingredients included in this report are listed alphabetically in Table 1. Table 2 and Table 3 present these ingredients based initially by increasing polyglyceryl chain length and second by increasing alkyl chain length; however, when there is a mixture of fatty acid constituents, those ingredients are presented by chain length for the polyglyceryl moiety and alphabetically based on the fatty acid component. Test data are presented based on increasing chain length (i.e., the order provided in Table 2 and Table 3).

According to the *International Cosmetic Ingredient Dictionary and Handbook*, most of these ingredients are reported to function in cosmetics as skin-conditioning agents and/or surfactants[1] (Table 3). Additional functions have also been reported.

In 2011, the Cosmetic Ingredient Review (CIR) Expert Panel (Panel) published a safety assessment of a family of ingredients that included Polyglyceryl-20 Octaisononanoate; the Panel concluded that all of the ingredients named in that report are safe in the present practices of use and concentration identified in that assessment.[2] Because Polyglyceryl-20 Octaisononanoate is a polyglyceryl fatty acid ester and is structurally related to the ingredients in this report, it is being included in this safety assessment.

The Panel has recently reviewed the safety of monoglyceryl monoesters, and concluded that the monoglyceryl monoesters are safe in cosmetics in the present practices of use and concentration described in that safety assessment.[3] Monoglyceryl monoesters and the polyglyceryl fatty acid esters both consist of the same starting materials, and they have the same potential metabolites. The difference between these two families of ingredients is that monoglyceryl monoesters are structurally constituted of the esterification products of only one equivalent of glycerin and one equivalent of a carboxylic acid, as opposed to the varying number of equivalents of glycerin and fatty acids in the polyglyceryl esters.

The Panel has previously reviewed the safety of ingredients that represent some of the starting materials of the polyglyceryl fatty acid esters that may persist as residual impurities in the polyglyceryl esters products, or may represent potential metabolites (e.g., from the action of esterases in the skin), such as glycerin and free fatty acids. A list of relevant ingredients that have been reviewed and the associated conclusions are provided in Table 4. (The full reports can be found on the CIR website: http://www.cir-safety.org/ingredients). Other ingredients, such as dipropylene glycol and polypropylene glycols (PPGs), have also been reviewed and are also included in Table 4 because they have similar properties and functions.

Much of the toxicity data included in this safety assessment were found on the European Chemicals Agency (ECHA) website.[4] The ECHA website provides summaries of information generated by industry, and it is the summary data that are reported in this safety assessment when ECHA is cited. Also, when deemed appropriate, read-across data from ECHA are included in this report. In some ECHA dossiers, such as in 1,2,3-propanetriol, homopolymer, diisooctadecanoate, the number of polyglyceryl chains is not defined. Because the number of polyglyceryl chains is not defined, and it therefore is unclear what specific ingredient is being studied, the data are presented as potential read-across data.

Several studies that are summarized in this safety assessment examined the toxicity of a "polyglyceryl ester". The exact composition of the test material was not identified in many of the studies and, generally, very few details were provided. However, this information is included in this safety assessment for completeness.

CHEMISTRY

Definition and Structure

The ingredients in this report are each structurally constituted of the esterification products of polyglycerin chains and fatty acids. These ingredients vary in the number of equivalents of glycerin and fatty acids, and the length of those fatty acids (Figures 1 and 2). The definitions and idealized structures of the polyglyceryl fatty acid esters are provided in Table 3.

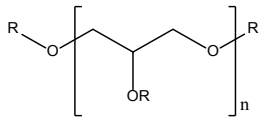

Figure 1. Generic structure of polyglyceryl esters, wherein R represents hydrogen or the residue of certain fatty acids, and n varies from 2 to 20

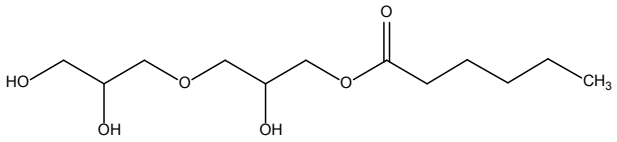

Figure 2. Polyglyceryl-2 caprate (wherein R, in the general structure in Figure 1, is hydrogen in 3 instances and caprate in 1 instance; and n is 2)

The polymerization process used to produce polyglycerol yields a distribution of different oligomers that have a primarily linear structure.[5] In addition to the linear configuration, a significant part of the polyglycerol is of the branched types, e.g., originating from 1,2- and 2,2-*O*-ether linkages.

Polyglyceryl esters of fatty acids have a hydrophilic polyglycerol group that consists of a finite number of hydroxyethers of glycerol and a hydrophobic fatty acid chain within the same compound.[6] These ingredients are non-ionic compounds, and a range of polarities is possible because of the variation of the degree of polymerization and number of fatty acids per head-group.

Physical and Chemical Properties

The physical properties and appearance of polyglyceryl esters of fatty acids mainly depends on their molecular structure. Typically, the physical form of those with a higher degree of polymerization and shorter or unsaturated fatty acid chains ranges from viscous liquids to plastic pastes, and the polyglyceryl esters with a lower degree of polymerization and longer, saturated fatty acid chains are generally powders, flakes or small beads.[6] The color of the esters is dependent on the source of the fatty acids, but the polyglycerol will contribute to the color.[5] The solubility of polyglyceryl esters in organic solvents depends on the nature of the solvent and the polarity of the ester but, generally, the esters will show best solubility in protic and polar aprotic solvents, such as lower alcohols and dimethyl sulfoxide (DMSO).

Polyglyceryl esters of fatty acids are polar or amphiphilic lipids, and the amphiphilic properties in water exhibit mesomorphic activities forming lyotropic liquid crystals.[6] The polyglyceryl ester as a polar emulsifier will form aggregated bodies, such as micelles, at low concentrations in water. Polyglyceryl esters of fatty acids become unstable with water and high temperatures, and the instability is enhanced in the presence of alkaline substances. The presence of an alkali or acid results in the partial hydrolysis of fatty acids and the formation of free polyglycerol.

Polyglyceryl esters are comparable to monoglycerides with respect to hydrolysis. In enzymatic systems, lipases will hydrolyze the polyglyceryl ester, as seen in the case of other glycerides.[5]

The average fatty acid compositions (when available) are described in Table 5, and the physical and chemical properties of many of the ingredients included in this safety assessment are presented in Table 6.

Method of Manufacture

The synthesis of polyglyceryl esters of fatty acids is achieved by the polymerization of a hydrophilic headgroup, and then esterification of the headgroup with the hydrophobic tails.[6] Polyglycerols are generally prepared from an alkaline condensation of glycerol molecules at elevated temperature, with the removal of water. Because one glycerol molecule possesses 3 reactive sites (1 secondary alcohol (center position) and 2 primary alcohols (terminal positions)), several kinds of diglycerol molecules can be formed. If the polymerization proceeds to tri-, tetra-, or higher glycerols, then the number of possible linear or branched isomers increases exponentially. Moreover, once a dimer is formed, cyclic products can result from intra-molecular ring-closure reactions (Figure 3).

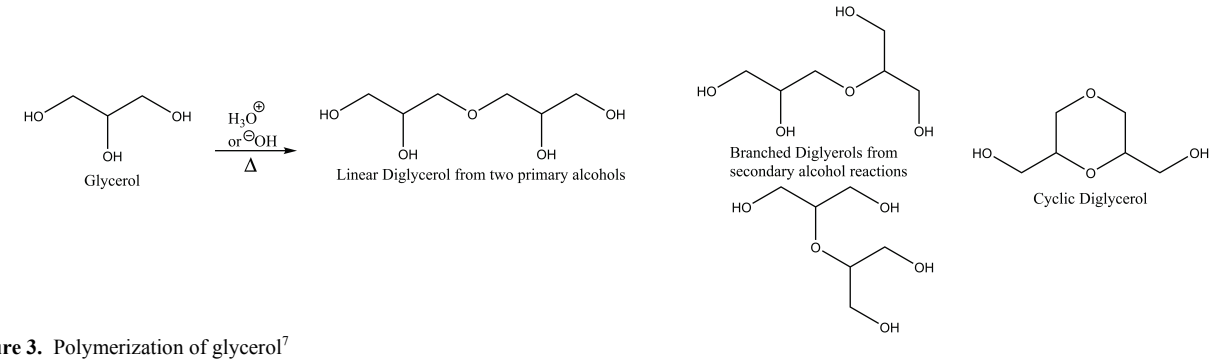

Figure 3. Polymerization of glycerol[7]

Polyglycerols can be used as produced, or they may be stripped of excess glycerol and cyclic glycerols by steam distillation at reduced pressure.[7] Alternatively, stripping processes have been developed using mesoporous and zeolite catalysts under milder conditions.

Other possible processes for production of a polyglycerol use reactive petrochemical substances such as epichlorohydrine (1-chloro-2,3-dihydroxypropane), which is allowed to react with glycerol in an etherification process. However, epichloro-hydrine is a hazardous material, and the purification of the polyglycerol complicates the process.[5] Glycidol is also used for the production of polyglycerol, and the oxirane group easily reacts with glycerol or epichlorohydrine, depending on the conditions of the reaction and the type of polyglycerol required. However, these processes use chemicals that make the process non-competitive in relation to a glycerol based process.

According to the World Health Organization (WHO) Food and Agriculture Organization (FAO), polyglyceryl esters of fatty acids (as used in foods) are formed by reacting polymerized glycerols with edible fats, oils (edible fats and oils are primarily triglycerides), or fatty acids.[8] The degree of polymerization varies, and is specified by a number (such as tri-) that is related to the average number of glycerol residues per polyglycerol molecule.

Polyglyceryl esters of fatty acids also can be prepared by direct esterification between polyolethers and fatty acids at elevated temperatures (T > 200°C) with the removal of water.[5,6] The esterification is normally carried out under alkaline conditions and can be stopped by simply adding an acid and lowering the reaction temperature. To obtain a large amount of mono- and diesters, the synthesis is generally carried out with an excess of polyglycerol. Some unreacted polyglycerol can be removed by simple gravimetric settling, and the remaining fraction by extraction with water combined with salts in a charge-wise separation process. Alternatively, polyglyceryl esters can be prepared by an inter-esterification (or transesterification) between polyglycerols and triglycerides; this is a reaction carried out at a high temperature and under conditions similar to direct esterification, but the degree of polymerization is not as high as obtained with direct esterification. Transesterification between polyglycerol and alcohol esters of fatty acids is another possible method of synthesis; using this process, methanol is continuously removed from the reactor, and the process includes a second step to reduce the remaining unreacted oxirane oxygen.

Composition and Impurities

Joint FAO/WHO Expert Committee on Food Additives (JECFA) specifications for polyglyceryl esters of fatty acids used in foods state "the polyglycerol moiety shall be composed of not less than 70% of di-, tri- and tetraglycerols and shall contain not more than 10% of polyglycerols equal to or higher than heptaglycerol"; that acids other than fatty acids shall not be detectable; and that not more than 2 mg/kg lead is detectable.[8] Minor amounts of mono-, di-, and triglycerides, free glycerol and polyglycerols, free fatty acids, and sodium salts of fatty acids may be present.

Trace amounts of unreacted glycerol and fatty acid soaps can be found in polyglyceryl esters of fatty acids.[6] Specifications, impurities or constituents of some of the ingredients included in this report are provided in Table 7.

USE

Cosmetic

The safety of the cosmetic ingredients included in this safety assessment is evaluated based on data received from the U.S. Food and Drug Administration (FDA) and the cosmetics industry on the expected use of these ingredients in cosmetics. Use frequencies of individual ingredients in cosmetics are collected from manufacturers and reported by cosmetic product category in FDA's Voluntary Cosmetic Registration Program (VCRP) database. Use concentration data are submitted by Industry in response to surveys, conducted by the Personal Care Products Council (Council), of maximum reported use concentrations by product category.

Based on 20156 VCRP data and the results of the Council surveys, 77 of the 274 ingredients included in this report are reported to be in use. According to 2016 VCRP registration data, Polyglyceryl-3 Diisostearate has the most reported uses of

the ingredients included in this report; of the 371 reported uses, 363 are in leave-on formulations, 216 of which are in lipsticks[9] (Table 8). Polyglyceryl-4 Isostearate has the second highest number of reported uses; of the 280 uses, all but one is in leave-on products. The results of the concentration of use surveys conducted by the Council indicate Polyglyceryl-2 Triisostearate and Polyglyceryl-3 Diisostearate have the highest concentration of use in a leave-on formulation; these ingredients are used at 40% and 39% in lipsticks, respectively[10-14] (Table 8). Additionally, supplier-recommended use concentrations are provided; most of the recommended use levels are ≤10% (Table 9).

Use concentrations were reported for several ingredients that were not reported as used in the VCRP; it should be presumed there is at least one use in every category for which a concentration is reported. Additionally, several ingredients have uses reported in the VCRP, but concentration of use data were not received. The 197 ingredients with no reported uses in both the VCRP and industry survey are listed in Table 10.

Of the polyglyceryl fatty acid esters used in cosmetic formulations, many are used in products applied to the eye area, that can result in incidental ingestion, or that come into contact with mucous membranes. The highest reported concentrations of use for these types of exposures are 24.1% Polyglyceryl-4 Isostearate in "other" eye make-up preparations and 40% Polyglyceryl-2 Triisostearate in lipstick formulations (resulting in incidental ingestion and mucous membrane exposure).[11] A few of the polyglyceryl fatty acid esters are reported to be used in baby products; Polyglyceryl-3 Diisostearate has the highest reported use in a baby product, i.e., 2% in baby lotions, oils, and creams.

Additionally, some of the polyglyceryl fatty acid esters are used in cosmetic sprays and could possibly be inhaled; for example, Polyglyceryl-3 Distearate is reported to be used at 3% in spray body and hand creams. In practice, 95% to 99% of the droplets/particles released from cosmetic sprays have aerodynamic equivalent diameters >10 μm, with propellant sprays yielding a greater fraction of droplets/particles <10 μm compared with pump sprays.[15,16] Therefore, most droplets/particles incidentally inhaled from cosmetic sprays would be deposited in the nasopharyngeal and thoracic regions of the respiratory tract and would not be respirable (i.e., they would not enter the lungs) to any appreciable amount.[17,18]

All of the polyglyceryl fatty acids named in this report are listed in the European Union inventory of cosmetic ingredients, and none of the listed ingredients are restricted from use in any way under the rules governing cosmetic products in the European Union.[19] In Australia, according to a National Industrial Chemicals Notification and Assessment Scheme (NICNAS), Polyglyceryl-10 Laurate (~60% pure, with ~40% polyglycerin-10 and ~2% sodium laurate) is not considered to pose an unreasonable risk to public health when used in the proposed manner (i.e., ≤3% in skin lotions), and cannot be classified according to the *Globally Harmonised System for the Classification and Labelling of Chemicals* or the *Approved Criteria for Classifying Hazardous Substances*.[20]

Non-Cosmetic

Polyglyceryl esters of fatty acids, up to and including the decaglycerol esters, are permitted as multipurpose direct food additives when (1) they are prepared from corn oil, cottonseed oil, lard, palm oil from fruit, peanut oil, safflower oil, sesame oil, soybean oil, and tallow and the fatty acids derived from these substances (hydrogenated and non-hydrogenated) and/or oleic acid derived from tall oil fatty acids; (2) they are used as emulsifiers in food, in amounts not greater than that required to produce the intended physical or technical effect; (3) polyglyceryl esters of a mixture of stearic, oleic, and coconut fatty acids are used as a cloud inhibitor in vegetable and salad oils when use is not precluded by standards of identity, and oleic acid derived from tall oil fatty acids may be used as a substitute for, or together with, the oleic acid; and (4) polyglyceryl esters of butter oil fatty acids are used as emulsifiers in combination with other approved emulsifiers in dry, whipped topping base, when used at a level not in excess of the amount required to perform their emulsifying effect. [21CFR172.854]

JECFA established an acceptable daily intake (ADI) of 0-25 mg/kg bw for polyglyceryl esters of fatty acids having an average chain length of up to 3 glycerol units,[21] and an ADI of 0-7.5 mg/kg bw for polyglyceryl esters of interesterified ricinoleic acid.[22] In the EU, the esters are listed as food additives at concentrations between 5000 and 10,000 mg/kg in certain foods, and up to 7% free glycerol/polyglycerol is allowed (i.e., 700 mg/kg).[23] Polyglyceryl-10 Caprylate/Caprate[24] and Polyglyceryl-10 Oleate[25] are polysorbate replacers, dispersing agents, and emulsifiers in foods.

Several polyglyceryl oleates are allowed for use as inactive ingredients in approved drug products.[26] Polyglyceryl-3 Oleate is approved as an inactive ingredient in topical, oral, and vaginal drug products. In oral products, maximum potency is 0.87 mg in gelatin-coated capsules, 330.7 mg in soft gelatin capsules, and 310 mg/ml in oral solutions; in vaginal products maximum potency is 2.7% in regular and sustained-release emulsions and creams. Approved dermal use is in topical sustained release creams; a maximum potency was not specified. Polyglyceryl-4 Oleate is approved as an inactive ingredient in vaginal emulsions and creams at a maximum potency of 2.71%. Polyglyceryl-10 Oleate is approved for use in oral soft gelatin capsules and in oral solutions; maximum potency is 199.9 mg and 190 mg/ml, respectively.

Polyglyceryl-10 Oleate is used as an internal lubricant for polyvinyl chloride (PVC) sheet and film and as an anti-fog agent in plasticized PVC film formulations.[25]

TOXICOKINETICS

Penetration Enhancement

Polyglyceryl-3 Diisostearate

Polyglyceryl-3 Diisostearate was not a penetration enhancer in a study that evaluated the skin penetration enhancing effects of several excipients on the hydrophilic drug 5-fluorouracil.[27]

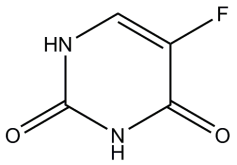

Figure 4. 5-Fluorouracil

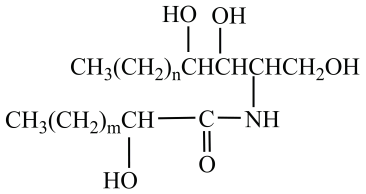
The ability to enhance skin penetration was determined *in vitro* by measuring skin permeability coefficients for human abdominal skin samples.

Polyglyceryl-3 Dioleate

Polyglyceryl-3 Dioleate is reported to be a water-in-oil surfactant/solubilizer associated with enhanced drug penetration.[28]

Polyglyceryl-4 Laurate and Polyglyceryl-4 Oleate

The effect of 2 microemulsions on the rate and extent of release and penetration of ceramide AP was evaluated using an *in vitro*, multi-layer, membrane model with 4 layers of circular 40-mm membrane films arranged one over the other.[29]



wherein m has a value ranging from 13 to 27 and n has a value ranging from 12 to 20.

Figure 5. Ceramide AP

One test microemulsion, an o/w emulsion, contained 15% Polyglyceryl-4 Laurate, 15% Polyglyceryl-4 Oleate, and 60% water-1,2 pentanediol (1:9); the other, a w/o emulsion, contained 30% Polyglyceryl-4 Laurate, 15% isopropyl palmitate/linoleic acid (5:2), and 55% water-1,2 pentanediol (1.5-8.5). Both test formulations contained 0.4% ceramide AP. A non-ionic hydrophilic cream containing 0.5% ceramide AP was used as a reference formulation. Each test substance, in an amount that contained 50 µg ceramide AP, was spread evenly over a 4 cm^2 area. The formulation was left in place for 15-180 min; the unabsorbed test material was then removed and the ceramide was extracted from the membranes. When compared to the reference cream, the microemulsions increased the rate and extent of penetration of ceramide AP. Within 15 min, a higher percentage of ceramide AP was released from the microemulsions and penetrated into the deeper membrane layers; ceramide AP was not detected in the 3rd and 4th layers when the reference cream was used. Also, the amount that penetrated into each layer at each time point was greater with the microemulsions than with the cream. The total percent ceramide AP released and penetrated was 93.4% with the microemulsion containing 15% Polyglyceryl-4 Laurate and 15% Polyglyceryl-4 Oleate, 84.2% for the second test formulation, and 73.3% with the reference formulation.

The effect of similar microemulsions and microemulsion gels on the permeation of ceramide NP was evaluated in human thigh skin samples using Franz diffusion cells.[30] Several microemulsions were evaluated; the formulations were composed of 30 or 35% Polyglyceryl-4 Laurate/Polyglyceryl-4 Oleate (1:1), 10-15% isopropyl palmitate/linoleic acid (9:12), 50-60% water/1,2 pentanediol (1.5:8.5), 0.2% ceramide AP, and 0.1% deuterated ceramide NP. The gels were prepared by dispersing 2.5% Carbopol® 940 into the microemulsion. Some of the formulations were o/w, and some were bicontinuous. A hydrophilic cream containing 0.2% deuterated ceramide NP was used as a reference formulation. Twenty mg of each formulation was applied to the skin surface (3.1416 cm^2) and allowed to permeate for 300 min. After 300 min, the skin surface was wiped and the stratum corneum layer was removed with 10 tape strips over a 2.016 cm^2 area. Subsequently, 3 skin punches were taken and the epidermal layer was removed. Permeation was deeper from the microemulsions, as compared to the cream and the microemulsion gels; additionally, penetration was deeper with the o/w formulations compared to the bicontinuous formulations. Deuterated ceramide NP in the cream did not permeate into the deeper layers of the stratum corneum and other skin layers. Permeation from the gel was shallow due to its high viscosity.

Polyglyceryl-10 Trioleate

The effect of Polyglyceryl-10 Trioleate on the permeation of tenoxicam (a non-steroidal anti-inflammatory drug) in a propylene glycol solution was examined *in vitro* using dorsal skin from male Hartley strain guinea pigs.[31]

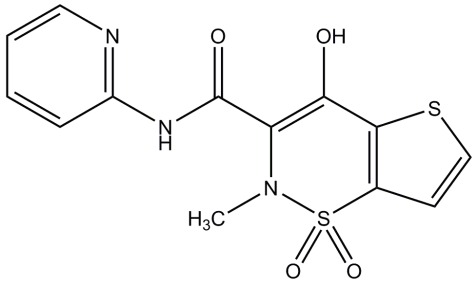


Figure 6. Tenoxicam

The test solution was prepared by suspending 0.3 g tenoxicam in a mixed solution of 3.0 g propylene glycol and 1.5 g Polyglyceryl-10 Trioleate, and the suspension was adjusted to a pH of 6.0. Using a Franz-type diffusion chamber, 1 g of the resulting suspension, which contained 1% tenoxicam, 10% propylene glycol, and 5% Polyglyceryl-10 Trioleate, was applied to the donor skin, and 1.0 ml of the receptor solution was sampled every 3 h for 48 h. The flux of tenoxicam was statistically significantly enhanced by the inclusion of Polyglyceryl-10 Trioleate, from 8.11 x 10^{-5} $\mu g/s \cdot cm^2$ to 28.48 $\mu g/s \cdot cm^2$.

Absorption, Distribution, Metabolism, and Excretion (ADME)

Oral

Metabolic studies of polyglyceryl esters indicated that these esters are hydrolyzed in the gastrointestinal (GI) tract, and utilization and digestibility studies supported the assumption that the fatty acid moiety is metabolized in the normal manner.[32] Analytical studies have produced no evidence of accumulation of the polyglycerol moiety in body tissues.

Albino Wistar rats were fed a diet containing 5% or 10% polyglyceryl ester; the exact composition of the ester was not provided, but it was stated that the ester was mostly prepared with stearic and oleic acids.[33] Control animals were given untreated feed. The number of animals per group and duration of dosing also was not specified, however some animals were fed the test diet for up to 14 mos, and some were maintained through 3 generations. Feed consumption was determined for 2 males and 2 females per group, and feces were collected for these animals for 24 days. Fecal lipids were increased in the test groups when compared to the controls; however, the researchers stated that at least 95-98% of the polyglyceryl esters were digested.

Similarly, groups of Wistar rats were fed a diet containing 5% polyglyceryl ester prepared with oleic acid or with linseed oil, and feed consumption was measured and feces collected for 2 males and 2 females per group for 24 days.[33] The polyglyceryl esters were almost completely utilized.

Groups of 8 male Sherman rats were fed a restricted diet consisting of 1 g of a polyglyceryl ester in 5 g basic diet/day for 3 wks, followed by 8 wks feeding, *ad libitum*, of a diet containing 8% of the test material.[34] The esters used in the study ranged in size from 2 to 30 glyceryl radicals, with hydrogenated cottonseed oil or peanut oil. Fecal fat excretion, calculated as total lipid extract, absorption, and digestibility values, were determined during the restricted and *ad libitum* feeding periods. The fecal lipids from rats fed the polyglyceryl hydrogenated cottonseed oil esters were higher in palmitic, stearic, and oleic acids, and lower in linoleic acid, than those the fed the polyglyceryl peanut oil esters. Gas-liquid chromatography (GLC) analysis of the fatty acids of the extracted lipids from the epididymal fat pads determined that only triglycerides were present and no appreciable amounts of polyglycerols were deposited.

A study was conducted in which rats were fed a polyglyceryl ester with a high melting point for 8 mos.[35] No residues were detected in depot fat, or in fat of muscle, liver, kidney or spleen. (Details were not provided.)

Polyglyceryl Oleates and Decaoleate

The metabolism of Polyglyceryl-3 Oleate, Polyglyceryl-10 Oleate, and Polyglyceryl-10 Decaoleate was investigated in male Sprague-Dawley rats.[36] Groups of 4 rats were dosed with 1% Polyglyceryl-3 [^{14}C]Oleate, Polyglyceryl-10 [^{14}C]Oleate, [^{14}C]Polyglyceryl-10 Oleate, Polyglyceryl-10 [^{14}C]Decaoleate, and [^{14}C]Polyglyceryl-10 Decaoleate by stomach tube in a liquid diet; the diet contained 7-14 μCi of ^{14}C. The study also included 2 polyglyceryl esters that are not cosmetic ingredients, but are similar to ingredients reviewed in this report: triglycerol [^{14}C]tetraoleate and polyglycerin-10 [^{14}C]monoeicosanoate. Catabolism studies were conducted by administering the test diet, collecting expired CO_2, feces, and urine with the use of metabolism chambers, and collecting GI tract contents and examining the carcass of each animal after 51 h. In additional groups of 4 animals, simultaneous catabolism-absorption studies were conducted by inserting a thoracic duct cannula in each animal, dosing the animals, and then using a metabolism chamber for the collection of lymph, respiratory CO_2, feces, and

urine (each as a single fraction) for 51 h. Lipids were extracted from the lymph of animals dosed with fatty-acid labelled esters, and the distribution of radioactivity among the various lipid constituents of lymph was obtained to determine whether any intact polyglyceryl esters were present in the lymph lipids. The metabolism of the esters was also compared to glycerol-1,3-[^{14}C], [^{14}C]polyglycerin-3, and [^{14}C]polyglycerin-10.

The disposition of radioactivity following administration of each compound is presented in Table 11. In the catabolism studies, total recovery of the radioactivity ranged from 88-98% of the dose. The distribution of the absorbed [^{14}C]Polyglyceryl-10 Oleate and [^{14}C]Polyglyceryl-10 Decaoleate was considerably different from that of glycerol. The absorbed polyglyceryls were excreted primarily in the urine (33.5-37%) with less than 4% of the ^{14}C appearing in the respiratory CO_2 and less than 5.5% in the carcass; ~44.5-46.5% was found in the GI contents. Only small amounts of radioactivity from the [^{14}C]oleic acid moiety were recovered in feces (~0.1-0.9%) and GI content (~2.8-4.0%), and the fatty acid appeared to be equally well-absorbed as the polyceryl-3 and the polyglyceryl-10 ester. Radioactivity from labeled oleic acid moieties of the esters appeared in expired CO_2 at close to the same rates as that from glycerol; however, recovery of labeled polyglycerin-3 and polyglycerin-10 in expired CO_2 was less than 4% of the dose, with unpolymerized glycerol accounting for most of what was recovered. Radioactivity from the eicosanoic acid-labeled ester was excreted in CO_2 at a lower rate (55.5%) than that for the oleic acid-labeled compounds.

In the catabolism-absorption studies, 83-102% of the radioactivity was recovered. No more than 5% of the radioactivity from glycerol-labeled esters was absorbed via the lymphatic system; however, ~67.5-78.5% of the radioactivity from the oleic acid-labeled polyglyceryl esters was recovered in the lymph, and ~54% was recovered in the lymph of animals given the eicosanoate-labeled polyglyceryl ester. Lipids from the oleate- (and eicosanoate-) labeled compounds contained 97-99% of the total lymph radioactivity.

In vitro hydrolysis studies confirmed that the oleic acid ester bond in the polyglyceryl-3 and polyglyceryl-10 esters was readily cleaved. Additionally, it was shown that the eicosanoate bond was cleaved more slowly than the oleate bond. The researchers concluded that the polyglycerols were not catabolized, the ether linkages are inert to normal enzymatic hydrolysis, and the polyglycerols were absorbed and rapidly excreted in the urine without being catabolized.

Groups of 10 male and 10 female Sprague-Dawley rats were fed a diet containing 2.5, 5.0, or 10.0% Polyglyceryl-10 Decaoleate for 90 days, and the control group was fed a diet containing soybean oil as the dietary fat.[37] The percentage of dietary fatty acids absorbed decreased as the levels of Polyglyceryl-10 Decaoleate in the diet increased. Fat absorption by males and females of the 5 and 10% test groups was statistically significantly less than controls at wks 4 and 10, and was statistically significantly decreased in females of the 2.5% group at wk 4 and males of the 2.5% group at wk 10. GLC analysis of fecal fatty acids revealed excretion of oleic acid increased in a dose-related manner; the increased excretion of fatty acids in general, and oleic acid in particular, indicated that the absorption of dietary Polyglyceryl-10 Decaoleate was not complete. The researchers stated that fecal oleic acid may have resulted from excretion of intact Polyglyceryl-10 Decaoleate or from hydrolyzed or partially hydrolyzed but unabsorbed material.

In Vitro

Polyglyceryl-2 Diisostearate

The metabolism of Polyglyceryl-2 Diisostearate was evaluated using a lipase assay; olive oil was used as a reference substance.[38] Both Polyglyceryl- Diisostearate and olive oil increased the fatty acid concentration in all reaction vials in a time dependent manner, and the speed of fatty acid formation was comparable for both substrates. The *in vitro* experimental results support the hypothesis that accumulation of Polyglyceryl-2 Diisostearate in the gut is unlikely.

TOXICOLOGICAL STUDIES

Acute Toxicity

Acute toxicity studies are summarized in Table 12.[32,38-54]

In an acute dermal toxicity study in rats, the LD_{50} of 1,2,3-propanetriol, homopolymer, diisooctadecanoate was>5 g/kg. Low toxicity was reported in acute oral studies. In rats, the LD_{50} >2 g/kg for Polyglyceryl-3 Caprate, Polyglyceryl-3 Caprylate, Polyglyceryl-4 Caprate, Diisostearoyl Polyglyceryl-3 Dimer Dilinoleate, and Polyglyceryl-8 Decabehenate/Caprate, the LD_{50} was estimated to be >2.5 g/kg for Glyceryl/Polyglyceryl-6 Isostearate/Behenate Esters, Macadamia Seed Oil Polyglyceryl-6 Esters Behenate, Polyglyceryl-8 Decaerucate/Decaisostearate/Decaricinoleate, and Polyglyceryl-10 Nonaisostearate, and the LD_{50} was >5 g/kg for Polyglyceryl-3 Isostearate, Polyglyceryl-3 Oleate, Polyglyceryl-2 Diisostearate and Polyglyceryl-3 Diisostearate.

Short-Term Toxicity

Animal

Oral

Polyglyceryl Esters - general

In rats, repeated oral dosing with 10 g/kg bw polyglyceryl ester daily over 5 days caused no deaths.[32] (No details were provided.)

The feeding of a restricted diet consisting of 1 g of a polyglyceryl ester in 5 g basic diet/day for 3 wks to Sherman rats, followed by 8 wks feeding, *ad libitum*, of a diet containing 8% of the test material (8 males/group; study described in the ADME section) did not result in any microscopic abnormalities in the liver, kidneys, or ileum.[34]

Polyglyceryl Stearate

Two groups of 4 male albino rats were administered a suspension of 1 g/kg bw/day of polyglyceryl stearate (glyceryl chain length not stated) in an aqueous solution of 0.5% carboxymethylcellulose (CMC) and 0.1% Tween 80 for 10 wks; one group was fed a basic diet, and the other a diet supplemented with 5% hydrogenated fat.[55] Two untreated control groups, one fed a basal diet and one the fat-supplemented diet, were used. Polyglyceryl stearate was not toxic, and it did not have an effect on red blood cell count, white blood cell count, or hemoglobin values.

Polyglyceryl-2 Diisostearate

In a dietary study, 5 male and 5 female rats per group were given feed containing 0, 0.012, 0.12, or 1.2% Polyglyceryl-2 Diisostearate (for a targeted dose of 0, 10, 100, or 1000 mg/kg/day, respectively) for 28 days, and a control group was given untreated feed.[38] There were no mortalities, clinical signs of toxicity, effects on body weight, clinical pathology, or gross or histopathology alterations that were considered related to the dietary administration of the test substance and/or considered to be of toxicological significance. The no observed adverse effect level (NOAEL) was 845 mg/kg/day in males and 922 mg/kg/day in females, corresponding to the highest dietary concentration tested.

Human

Oral

Polyglyceryl Esters - general

For 3 wks, 37 subjects were fed 2-20 g/day polyglyceryl ester in their diet.[32] No abnormalities were detected in the hematology or clinical chemistry values or urinary or fecal parameters that were examined.

Subchronic Toxicity Studies

Animal

Oral

Polyglyceryl-10 Decaoleate

Groups of 10 male and 10 female Sprague-Dawley rats were fed a diet containing 2.5, 5.0, or 10.0% Polyglyceryl-10 Decaoleate for 90 days, and the control group was fed a diet containing soybean oil as the dietary fat.[37] Urine was collected from each group during wks 3 and 9, total fatty acid absorption was determined in feces collected during wks 4 and 10, and hematological studies were conducted during wks 5 and 11, and at study termination. No test article-related signs of toxicity were observed. Gross and microscopic examination of the testes and ovaries and other organs did not reveal any evidence of toxicity, and relative and absolute organ weights were unremarkable.

Chronic Toxicity Studies

Animal

Oral

Polyglyceryl Esters - general

Groups of 25 male and 25 female mice were fed a diet with 5% polyglyceryl ester for 80 wks.[32] No adverse effects on body weight, feed consumption, hematology values, or survival rate were noted. Carcass fat of the test group showed no polyglycerol residues. The levels of free fatty acids, unsaponifiable material, and the fatty acid composition of carcass fat were the same for the test group compared to a control group fed 5% ground nut oil in the diet. The only differences noted in organ weights were for the liver and kidneys of female mice, which were significantly higher. Microscopic examination of all major organs showed nothing remarkable.

In a 2-yr study, 28 male and 28 female rats were fed 5% polyglyceryl ester in the diet.[32] No adverse effects on body weight, feed consumption, hematology values, or survival rate were noted. Organ weights were similar in control and test groups. Liver function tests and renal function tests performed at 59 and 104 wks of the study were comparable between the test group and a control group fed 5% ground nut oil. The carcass fat contained no polyglycerol, and the levels of free fatty acid, unsaponifiable residue and fatty acid composition of carcass fat were not different from the controls. A complete histological examination of major organs showed nothing remarkable.

In the ADME study described previously, in which Wistar rats (number of animals per group not specified) were fed a diet containing 5 or 10% polyglyceryl ester (prepared mostly with stearic and oleic acid; duration of dosing not specified, however some animals were fed the test diet for up to 14 mos, and some were maintained through 3 generations), no abnormalities were observed upon microscopic examination of tissues (details not provided).[33]

DEVELOPMENTAL AND REPRODUCTIVE TOXICITY STUDIES

Oral

Polyglyceryl Esters - general

A test group of 22 rats was fed a diet containing 1.5% polyglyceryl ester for 3 generations.[32] A group of 28 rats was used as a control. The animals were kept for over 1 year without significant variation in fertility or reproductive performance. Gross and microscopic examination of the third generation revealed no consistent abnormality attributable to the test substance. No details were provided.

Polyglyceryl-3 Diisostearate

A combined repeated dose oral toxicity study with a reproduction/developmental toxicity screening test (OECD Guideline 422) was conducted in Wistar rats.[39] The animals were dosed once daily by gavage with 0, 100, 300, or 1000 mg/kg bw/day 1,2,3-propanetriol, homopolymer, diisooctadecanoate (n not defined; this substance is most likely Polyglyceryl-3 Diisostearate) in corn oil. Initially, the groups consisted of 12 males and 12 females. However, because a disturbance of the light/dark cycle was believed to cause a reduction in mating rate of the females of the first delivery, additional male and female rats were added in a second delivery for breeding to meet guideline requirements for the number of gravid females per group. All (1st and 2nd delivery) animals were subjected to the same conditions of the study, with the exception that the males of the second delivery were necropsied on day 24 after mating, not on day 16 of mating. Therefore, Polyglyceryl-3 Diisostearate was administered to male rats for up to 28 days (first delivery) and up to 41 days (second delivery) and to female rats for 14 days prior to mating, through the mating and gestation periods, and until the F_1 generation reached day 4 post-partum.

Because an impact caused by the light/dark cycle disturbance could not be excluded (i.e., a prolonged duration of gestation and an increased post-implantation loss at the high dose), the study was repeated with a third delivery with control and high-dose groups under proper light conditions. The test article was administered to12 male rats/group for 33 days and to12 female rats/group for 14 days prior to mating, through mating and gestation, and until day 4 post-partum.

Five males and 5 females/group killed at the end of the study were selected for hematology and clinical chemistry examinations, and some additional organs were weighed. The NOEL and NOAEL for systemic effects were ≥300 mg/kg bw/day and ≥1000 mg/kg bw/day 1,2,3-propanetriol, homopolymer, diisooctadecanoate, respectively, in both males and females. No adverse effects on body weights and body weight gains, feed consumption, hematology, clinical chemistry, neurobehavior, or gross or microscopic lesions were observed. Statistically significant increases in absolute and relative liver and kidney weights in males and females of the 1000 mg/kg bw/day were not considered to be adverse effects because there was no evidence for an impairment of organ function by clinical pathology and histopathology. Additionally, increases in the absolute and relative heart weights in high-dose females were without histopathological correlation and considered to be incidental.

GENOTOXICITY STUDIES

Genotoxicity studies are summarized in Table 13.[20,38-44,46,48,56-65]

Generally, negative results were obtained in genotoxicity tests. Polyglyceryl-2 Oleate, Polyglyceryl-2 Diisostearate, and 1,2,3-propanetriol, homopolymer, diisooctadecanoate were not genotoxic in the Ames test, mammalian cell gene mutation assay, or chromosomal aberration assay, with or without metabolic activation. Polyglyceryl-3 Caprate, Polyglyceryl-3 Caprylate, Polyglyceryl-3 Laurate, Polyglyceryl-3 Isostearate, Polyglyceryl-4 Caprate, Polyglyceryl-4 Isostearate, Polyglyceryl-4 Laurate/Succinate, Glyceryl/Polyglyceryl-6 Isostearate/Behenate Esters, Diisostearoyl Polyglyceryl-3 Dimer Dilinoleate, Macadamia Seed Oil Polyglyceryl-6 Esters Behenate, Polyglyceryl-8 Decabehenate/Caprate, Polyglyceryl-8 Decaerucate/Decaisostearate/Decaricinoleate, Polyglyceryl-6 Decaethylhexanoate, Polyglyceryl-10 Pentaisostearate, and Polyglyceryl-10 Nonaisostearate were negative in the Ames test. Polyglyceryl-6 Caprylate/CapratePolyglyceryl-10 Laurate (~60% pure) gave equivocal results in the absence and positive results in the presence of metabolic activation when tested at concentrations up to 125 and 2250 µg/ml, respectively, in a chromosomal aberration assay using Chinese hamster V79 cells, but was not clastogenic in a chromosomal aberration assay in human peripheral lymphocytes, with or without activation.

According to the European Food Safety Authority (EFSA) Panel, the impurities of polyglyceryl fatty acid esters, i.e. free fatty acids and their esters, have no structural alerts for genotoxicity.[23]

CARCINOGENICITY STUDIES

Oral

In a 2-yr study (summarized previously in "Chronic Toxicity"), 28 male and 28 female rats were fed 5% polyglyceryl ester in the diet.[32] Tumor incidence and tumor distribution were similar in control and test groups.

DERMAL IRRITATION AND SENSITIZATION STUDIES

Dermal irritation and sensitization studies are summarized in Table 14.[38,40-44,46-48,56,66-71,71-74,74-97]

Apricot Kernel Oil Polyglyceryl-4 Esters and Palm Oil Polyglyceryl-4 Esters were classified as non-irritant in the Skin-Ethic™ irritation test, Polyglyceryl-4 Laurate/Sebacate, Polyglyceryl-4 Laurate/Succinate, and Polyglyceryl-6 Caprylate/Caprate were considered to be non-irritant in the EpiSkin™ model for skin irritation, and Polyglyceryl-10 Decaethylhexanoate. Polyglyceryl-10 Pentaisostearate were considered non-irritating using the EpiDerm™ model for skin irritation.

In rabbits, Polyglyceryl-3 Caprate, a polyglyceryl mono/diester of capric acid (read-across for Polyglyceryl-3 Caprylate), Polyglyceryl-4 Caprate, Polyglyceryl-3 Diisostearate, 1,2,3-propanetriol, homopolymer, diisooctadecanoate, Macadamia Seed Oil Polyglyceryl-6 Esters Behenate, Polyglyceryl-8 Decabehenate/Caprate, and Polyglyceryl-8 Decaerucate/Decaisostearate/Decaricinoleate were not irritating to the skin. Polyglyceryl-2 Isostearate, Glyceryl/Polyglyceryl-6 Isostearate, and Polyglyceryl-10 Nonaisostearate were mildly irritating, Polyglyceryl-2 Diisostearate was slightly irritating, and Polyglyceryl-3 Isostearate and Polyglyceryl-3 Oleate were moderate irritants in rabbit skin. Polyglyceryl-3 Caprate, Polyglyceryl-3 Caprylate, Polyglyceryl-3 Isostearate, Polyglyceryl-4 Caprate, Polyglyceryl-4 Isostearate, Glyceryl/Polyglyceryl-6 Isostearate/Behenate Esters, Polyglyceryl-2 Diisostearate, Polyglyceryl-4 Diisostearate/Polyhydroxystearate/Sebacate (read-across for Diisostearoyl Polyglyceryl-3 Dimer Dilinoleate), Macadamia Seed Oil Polyglyceryl-6 Esters Behenate, Polyglyceryl-8 Decabehenate/Caprate, and Polyglyceryl-8 Decaerucate/Decaisostearate/Decaricinoleate were not sensitizers in guinea pig studies; Polyglyceryl-10 Nonaisostearate was not a sensitizer in a local lymph node assay. Polyglyceryl-3 Diisostearate was not a sensitizer in guinea pigs in one sensitization study (50% at induction and challenge; 25% at rechallenge), but results were inconclusive in a guinea pig maximization test (0.1% or 0.2% at intradermal induction; 40% at epicutaneous induction; 10 and 15% at challenge; 8 and 4% at rechallenge).

In clinical studies, 7% Polyglyceryl-2 Isostearate elicited slight irritation, and erythema was observed in 24-h occlusive patches tests of undiluted Polyglyceryl-10 Decaethylhexanoate (3/43 subjects and 3 controls) and Polyglyceryl-10 Pentaisostearate (1/43 subjects). Undiluted Glyceryl/Polyglyceryl-6 Isostearate/Behenate Esters, 5% Polyglyceryl-10 Laurate, 10% Polyglyceryl-10 Myristate, 5% Polyglyceryl-10 Isostearate, 5% Polyglyceryl-10 Oleate, 10% Polyglyceryl-10 Stearate, a mixture containing 60% Polyglyceryl-10 Eicosanedioate/Tetradecanedioate/40% glycerin, undiluted Polyglyceryl-2 Sesquiisostearate, 20% active 1,2,3-propanetriol, homopolymer, diisooctadecanoate, undiluted Macadamia See Oil Polyglyceryl-6 Esters Behenate, undiluted Polyglyceryl-8 Decabehenate/Caprate, 5% Polyglyceryl-10 Diisostearate, 50% Polyglyceryl-10 Pentaisostearate, and Polyglyceryl-10 Decaoleate (concentration not given) were not skin irritants. Undiluted Polyglyceryl-3 Laurate, Triisostearoyl Polyglyceryl-3 Dimer Dilinoleate, Polyglyceryl-10 Decaethylhexanoate, and Polyglyceryl-10 Pentaisostearate were not irritants or sensitizers.

Photosensitization/Phototoxicity

Animal

Polyglyceryl-10 Nonaisostearate

The phototoxicity and photosensitization potential of Polyglyceryl-10 Nonaisostearate were evaluated in female albino Dunkin-Hartley guinea pigs. In the phototoxicity study, 0.5 ml undiluted Polyglyceryl-10 Nonaisostearate was[39,47] applied to the right flank of 10 guinea pigs.[82] The animals were exposed to the maximal non-erythematous dose of ultraviolet (UV) radiation, and exposure was first to 150 mJ/cm^2 UVB and then to 7000 mJ/cm^2 UVA (source: Biotronic, Vilbert Lourmat). A non-irradiated test site served as a negative control, and 8-methoxypsoralen was used as the positive control. Reactions were scored 24 and 48 h after irradiation. No cutaneous reactions were observed; Polyglyceryl-10 Nonaisostearate was not phototoxic in guinea pigs.

In the photosensitization study, 3 induction applications were made, with 2 day intervals between applications, of 0.5 ml undiluted Polyglyceryl-10 Nonaisostearate (determined to be the maximal non-irritant concentration in a preliminary test) to a 25 cm^2 area of interscapular skin of 11 animals, and the test sites were exposed to 7000 mJ/cm^2 UVA irradiation 30 min after application.[98] Prior to application, 2 pair of intradermal injections were made with 50% Freund's Complete Adjuvant/physiological saline solution. Six control animals were treated in a similar manner using liquid paraffin. After a 16-day non-treatment period, the challenge was performed by applying 0.5 ml of undiluted Polyglyceryl-10 Nonaisostearate to a 50 cm^2 area on one flank of the test and control animals; 30 min after application, the treated site and an untreated site on the opposite flank were exposed to 7 J/cm^2 UVA irradiation. Cutaneous reactions were evaluated 24 and 48 h after challenge. No cutaneous reactions were observed during induction or challenge. Polyglyceryl-10 Nonaisostearate was not a photosensitizer.

OCULAR IRRITATION STUDIES

Ocular irritation studies are summarized in Table 15.[20,30,38-44,47,86,99-112]

Polyglyceryl-3 Laurate, a mixture containing 60% Polyglyceryl-10 Eicosanedioate/Tetradecanedioate, Triisostearoyl Polyglyceryl-3 Dimer Dilinoleate (10% in corn oil), undiluted Polyglyceryl-10 Decaethylhexanoate, and undiluted Polyglyceryl-10 Pentaisostearate were classified as non-irritating using an EpiOcular™ tissue model. In the hen's egg test chorioallantoic membrane (HET-CAM) assay, microemulsions containing 30% or 40% Polyglyceryl-4 Laurate, Apricot Kernel Oil Polyglyceryl-4 Esters, Palm Oil Polyglyceryl-4 Esters, and Polyglyceryl-2 Dioleate were classified as non-irritant, and Diisostearoyl Polyglyceryl-3 Dimer Dilinoleate produced minor irritation. Polyglyceryl-4 Laurate/Sebacate, Polyglyceryl-4 Laurate/Succinate, and Polyglyceryl-6 Caprylate/Caprate were considered non-irritant in the SkinEthic™ reconstituted human corneal epithelium model, and Polyglyceryl-10 Laurate, Polyglyceryl-10 Myristate, and Polyglyceryl-10 Isostearate were considered unlikely to cause irritation when evaluated in the rabbit enucleated eye test (REET). Polyglyceryl-10 Myristate, Polyglyceryl-10 Stearate, and Polyglyceryl-10 Diisostearate were non-irritating using the SIRC-neutral red (NR) method.

In rabbit eyes, Polyglyceryl-3 Caprate, a polyglyceryl mono/diester of capric acid (read-across for Polyglyceryl-3 Caprylate), Polyglyceryl-4 Caprate, Polyglyceryl-2 Diisostearate, Polyglyceryl-2 Dioleate, Polyglyceryl-3 Diisostearate, and 1,2,3-propanetriol, homopolymer, diisooctadecanoate were not irritating, and Polyglyceryl-3 Isostearate and Polyglyceryl-3 Oleate were slightly irritating. Glyceryl/Polyglyceryl-6 Isostearate/Behenate Esters, Polyglyceryl-10 Laurate, Polyglyceryl-10 Myristate, Polyglyceryl-10 Isostearate, Macadamia See Oil Polyglyceryl-6 Esters Behenate, and Polyglyceryl-8 Decabehenate Caprate caused minimal irritation in rabbit eyes, and Polyglyceryl-8 Decaerucate/Decaisostearate/Decaricinoleate and Polyglyceryl-10 Nonaisostearate were mild irritants. Polyglyceryl-10 Laurate (~60% pure) was possibly slightly irritating to the eyes of humans.

CLINICAL REPORTS

Case Reports

A case report described the incidence of recurring pruritic erythema over a 3-mo period in an 80-yr old female.[113] A 48-h closed patch test with the subject's cosmetics was positive (++). Subsequent testing with the individual ingredients was positive (+) with 0.5% aqueous (aq.) Polyglyceryl-10 Laurate, and the positive reaction caused by this substance was still present in this patient 7 days after exposure. Positive reactions (+) were reported at all concentrations with additional testing of 0.05-1% aq. Polyglyceryl-10 Laurate. After 6 mos, patch tests with 0.1-1% Polyglyceryl-10 Laurate (obtained from several suppliers), and 0.5-1% Polyglyceryl-4 Laurate and Polyglyceryl-6 Laurate, were positive. No reactions were reported with 0.1-1% aq. Polyglyceryl-10 Myristate, Polyglyceryl-10 Isostearate, Polyglyceryl-10 Stearate, and Polyglyceryl-10 Oleate, or with the control test materials.

SUMMARY

This assessment reviews the safety of 274 polyglyceryl fatty acid esters as used in cosmetics. Each of the esters in this group is a polyether comprising 2 to 20 glyceryl residues, end-capped by esterification with simple carboxylic acids, such as fatty acids. Most of these ingredients are reported to function in cosmetics as skin-conditioning agents and/or surfactants.

Seventy-seven of the 274 ingredients included in this report are reported to be in use. Polyglyceryl-3 Diisostearate has the most reported uses (371, 216 of which are in lipsticks), and Polyglyceryl-4 Isostearate has the second highest number of reported uses (280). Polyglyceryl-2 Triisostearate and Polyglyceryl-3 Diisostearate have the highest concentration of use in a leave-on formulation; these ingredients are used at 40% and 39%, respectively. Many of these polyglyceryl fatty acid esters are used in products applied to the eye area, products that can result in incidental ingestion, or products that come into contact with mucous membranes, and a few of the polyglyceryl fatty acid esters are reported to be used in baby products. Additionally, some of the polyglyceryl fatty acid esters are used in cosmetic sprays and could possibly be inhaled.

Polyglyceryl esters of fatty acids, up to and including the decaglycerol esters, are permitted as multipurpose direct food additives. JECFA established an ADI of 0-25 mg/kg bw for polyglyceryl esters of fatty acids having an average chain length of up to 3 glycerol units, and an ADI of 0-7.5 mg/kg bw for polyglyceryl esters of interesterified ricinoleic acid. In the EU, the esters are listed as food additives at levels between 5000 and 10,000 mg/kg in certain foods, and up to 7% free glycerol/polyglycerol is allowed (i.e., 700 mg/kg).

Polyglyceryl esters are hydrolyzed in the GI tract, and the fatty acid moiety is metabolized in a normal manner. Analytical studies have produced no evidence of accumulation of the polyglycerol moiety in body tissues.

The ability to enhance skin penetration was examined for several of the polyglyceryl fatty acid esters. Polyglyceryl-3 Dioleate is reported to be a water-in-oil surfactant/solubilizer associated with enhanced drug penetration. Polyglyceryl-10 Trioleate enhanced the flux of tenoxicam in an *in vitro* study. Microemulsions containing Polyglyceryl-4 Laurate and Polyglyceryl-4 Oleate increased ceramide permeation into skin.

In an acute dermal toxicity study in rats, the LD_{50} of 1,2,3-propanetriol, homopolymer, diisooctadecanoate was>5 g/kg. Low toxicity was reported in acute oral studies. In rats, the LD_{50} >2 g/kg for Polyglyceryl-3 Caprate, Polyglyceryl-3 Caprylate, Polyglyceryl-4 Caprate, Diisostearoyl Polyglyceryl-3 Dimer Dilinoleate, and Polyglyceryl-8 Decabehenate/Caprate, the LD_{50} was estimated to be >2.5 g/kg for Glyceryl/Polyglyceryl-6 Isostearate/Behenate Esters, Macadamia Seed Oil Polyglyceryl-6 Esters Behenate, Polyglyceryl-8 Decaerucate/Decaisostearate/Decaricinoleate, and Polyglyceryl-10 Nonaisostearate, and the LD_{50} was >5 g/kg for Polyglyceryl-3 Isostearate, Polyglyceryl-3 Oleate, Polyglyceryl-2 Diisostearate and Polyglyceryl-3 Diisostearate.

Dietary studies with polyglyceryl ester, polyglyceryl stearate, Polyglyceryl-2 Diisostearate, and Polyglyceryl-10 Decaoleate did not produce any remarkable effects. No test-article related adverse effects were observed in multi-generational studies with polyglyceryl esters or 1,2,3-propanetriol, homopolymer, diisooctadecanoate.

Generally, negative results were obtained in genotoxicity tests. Polyglyceryl-2 Oleate, Polyglyceryl-2 Diisostearate, and 1,2,3-propanetriol, homopolymer, diisooctadecanoate were not genotoxic in the Ames test, mammalian cell gene mutation assay, or chromosomal aberration assay, with or without metabolic activation. Polyglyceryl-3 Caprate, Polyglyceryl-3 Caprylate, Polyglyceryl-3 Laurate, Polyglyceryl-3 Isostearate, Polyglyceryl-4 Caprate, Polyglyceryl-4 Isostearate, Polyglyceryl-4 Laurate/Succinate, Glyceryl/Polyglyceryl-6 Isostearate/Behenate Esters, Diisostearoyl Polyglyceryl-3 Dimer Dilinoleate, Macadamia Seed Oil Polyglyceryl-6 Esters Behenate, Polyglyceryl-8 Decabehenate/Caprate, Polyglyceryl-8 Decaerucate/Decaisostearate/Decaricinoleate, Polyglyceryl-6 Decaethylhexanoate, Polyglyceryl-10 Pentaisostearate, and Polyglyceryl-10 Nonaisostearate were negative in the Ames test. Polyglyceryl-6 Caprylate/Caprate and Polyglyceryl-10 Laurate (~60% pure) gave equivocal results in the absence and positive results in the presence of metabolic activation when tested at concentrations up to 125 and 2250 µg/ml, respectively, in a chromosomal aberration assay using Chinese hamster V79 cells, but were not clastogenic in a chromosomal aberration assay in human peripheral lymphocytes, with or without activation. The impurities of polyglyceryl fatty acid esters, i.e. free fatty acids and their esters, have no structural alerts for genotoxicity.

In a 2-yr dietary study in rats, 5% polyglyceryl ester was not carcinogenic and did not produce any adverse effects.

Apricot Kernel Oil Polyglyceryl-4 Esters and Palm Oil Polyglyceryl-4 Esters were classified as non-irritant in the Skin-Ethic™ irritation test, Polyglyceryl-4 Laurate/Sebacate, Polyglyceryl-4 Laurate/Succinate, and Polyglyceryl-6 Caprylate/Caprate were considered to be non-irritant in the EpiSkin™ model for skin irritation, and Polyglyceryl-10 Decaethylhexanoate. Polyglyceryl-10 Pentaisostearate was considered non-irritating using the EpiDerm™ model for skin irritation.

In rabbits, Polyglyceryl-3 Caprate, a polyglyceryl mono/diester of capric acid (read-across for Polyglyceryl-3 Caprylate), Polyglyceryl-4 Caprate, Polyglyceryl-3 Diisostearate, 1,2,3-propanetriol, homopolymer, diisooctadecanoate, Macadamia Seed Oil Polyglyceryl-6 Esters Behenate, Polyglyceryl-8 Decabehenate/Caprate, and Polyglyceryl-8 Decaerucate/Decaisostearate/Decaricinoleate were not irritating to the skin. Polyglyceryl-2 Isostearate, Glyceryl/Polyglyceryl-6 Isostearate, and Polyglyceryl-10 Nonaisostearate were mildly irritating, Polyglyceryl-2 Diisostearate was slightly irritating, and Polyglyceryl-3 Isostearate and Polyglyceryl-3 Oleate were moderate irritants in rabbit skin. Polyglyceryl-3 Caprate, Polyglyceryl-3 Caprylate, Polyglyceryl-3 Isostearate, Polyglyceryl-4 Caprate, Polyglyceryl-4 Isostearate, Glyceryl/Polyglyceryl-6 Isostearate/Behenate Esters, Polyglyceryl-2 Diisostearate, Polyglyceryl-4 Diisostearate/Polyhydroxystearate/Sebacate (read-across for Diisostearoyl Polyglyceryl-3 Dimer Dilinoleate), Macadamia Seed Oil Polyglyceryl-6 Esters Behenate, Polyglyceryl-8 Decabehenate/Caprate, and Polyglyceryl-8 Decaerucate/Decaisostearate/Decaricinoleate were not sensitizers in guinea pig studies; Polyglyceryl-10 Nonaisostearate was not a sensitizer in a local lymph node assay. Polyglyceryl-3 Diisostearate was not a sensitizer in guinea pigs in one sensitization study (50% at induction and challenge; 25% at rechallenge), but results were inconclusive in a guinea pig maximization test (0.1% or 0.2% at intradermal induction; 40% at epicutaneous induction; 10 and 15% at challenge; 8 and 4% at rechallenge).

In clinical studies, 7% Polyglyceryl-2 Isostearate elicited slight irritation, and erythema was observed in 24-h occlusive patches tests of undiluted Polyglyceryl-10 Decaethylhexanoate (3/43 subjects and 3 controls) and Polyglyceryl-10 Pentaisostearate (1/43 subjects). Undiluted Glyceryl/Polyglyceryl-6 Isostearate/Behenate Esters, 5% Polyglyceryl-10 Laurate, 10% Polyglyceryl-10 Myristate, 5% Polyglyceryl-10 Isostearate, 5% Polyglyceryl-10 Oleate, 10% Polyglyceryl-10 Stearate, a mixture containing 60% Polyglyceryl-10 Eicosanedioate/Tetradecanedioate/40% glycerin, undiluted Polyglyceryl-2 Sesquiisostearate, 20% active 1,2,3-propanetriol, homopolymer, diisooctadecanoate, undiluted Macadamia See Oil Polyglyceryl-6 Esters Behenate, undiluted Polyglyceryl-8 Decabehenate/Caprate, 5% Polyglyceryl-10 Diisostearate, 50% Polyglyceryl-10 Pentaisostearate, and Polyglyceryl-10 Decaoleate (concentration not given) were not skin irritants. Undiluted Polyglyceryl-3 Laurate, Triisostearoyl Polyglyceryl-3 Dimer Dilinoleate, Polyglyceryl-10 Decaethylhexanoate, and Polyglyceryl-10 Pentaisostearate were not irritants or sensitizers.

Undiluted Polyglyceryl-10 Nonaisostearate was not phototoxic or a photosensitizer in guinea pigs.

Polyglyceryl-3 Laurate, a mixture containing 60% Polyglyceryl-10 Eicosanedioate/Tetradecanedioate, Triisostearoyl Polyglyceryl-3 Dimer Dilinoleate (10% in corn oil), undiluted Polyglyceryl-10 Decaethylhexanoate, and undiluted Polyglyceryl-10 Pentaisostearate were classified as non-irritating using an EpiOcular™ tissue model. In the HET-CAM assay, microemulsions containing 30% or 40% Polyglyceryl-4 Laurate, Apricot Kernel Oil Polyglyceryl-4 Esters, Palm Oil Polyglyceryl-4

Esters, and Polyglyceryl-2 Dioleate were classified as non-irritant, and Diisostearoyl Polyglyceryl-3 Dimer Dilinoleate produced minor irritation. Polyglyceryl-4 Laurate/Sebacate, Polyglyceryl-4 Laurate/Succinate, and Polyglyceryl-6 Caprylate/Caprate were considered non-irritant in the SkinEthic™ reconstituted human corneal epithelium model, and Polyglyceryl-10 Laurate, Polyglyceryl-10 Myristate, and Polyglyceryl-10 Isostearate were considered unlikely to cause irritation when evaluated in the REET. Polyglyceryl-10 Myristate, Polyglyceryl-10 Stearate, and Polyglyceryl-10 Diisostearate were non-irritating using the SIRC-NR method.

In rabbit eyes, Polyglyceryl-3 Caprate, a polyglyceryl mono/diester of capric acid (read-across for Polyglyceryl-3 Caprylate), Polyglyceryl-4 Caprate, Polyglyceryl-2 Diisostearate, Polyglyceryl-2 Dioleate, Polyglyceryl-3 Diisostearate, and 1,2,3-propanetriol, homopolymer, diisooctadecanoate were not irritating, and Polyglyceryl-3 Isostearate and Polyglyceryl-3 Oleate were slightly irritating. Glyceryl/Polyglyceryl-6 Isostearate/Behenate Esters, Polyglyceryl-10 Laurate, Polyglyceryl-10 Myristate, Polyglyceryl-10 Isostearate, Macadamia See Oil Polyglyceryl-6 Esters Behenate, and Polyglyceryl-8 Decabehenate Caprate caused minimal irritation in rabbit eyes, and Polyglyceryl-8 Decaerucate/Decaisostearate/Decaricinoleate and Polyglyceryl-10 Nonaisostearate were mild irritants.

Polyglyceryl-10 Laurate (~60% pure) was possibly slightly irritating to the eyes of humans.

DISCUSSION

The ingredients in this report are esterification products of polyglycerin chains and fatty acids that vary in numbers of glycerin and fatty-acid equivalents and lengths of the fatty acids. The polymerization process used to produce polyglycerol yields a distribution of oligomers with primarily linear structures. In addition to linear configurations, branched polyglycerol configurations, originating from 1,2- and 2,2-O-ether linkages, are also possible.

The Panel acknowledged this is a very large group of ingredients; however these ingredients are extensively metabolized to common nutrients and physiologic intermediates, therefore the Panel was satisfied that the data included in the report could be used to assess the safety of all the ingredients as used in cosmetics. Furthermore, the Panel has reviewed previously the safety of numerous ingredients that serve as starting materials for the synthesis of polyglyceryl fatty acid esters. These previously-reviewed ingredients, which can be residual impurities in the polyglyceryl esters products or potential metabolites (e.g., glycerin and free fatty acids released by the action of esterases in the skin), were found safe as used (or safe when formulated to be non-irritating) in cosmetic formulations.

Some of the polyglyceryl fatty acid esters can potentially enhance the penetration of other ingredients through the skin. The Panel cautioned that care should be taken in formulating cosmetic products that may contain these ingredients in combination with any ingredients whose safety was based on their lack of dermal absorption data, or when dermal absorption was a concern.

It was noted that some of these ingredients are derived from plants. The Panel expressed concern about pesticide residues and heavy metals that may be present in botanical ingredients, and stressed that the cosmetics industry should continue to use the necessary procedures to limit these impurities in the ingredient before blending into cosmetic formulations.

The Panel was concerned that the potential exists for dermal irritation with the use of products formulated using some of the polyglyceryl fatty acid esters. The Panel specified that products containing these ingredients must be formulated to be non-irritating.

Additionally, the Panel discussed the issue of incidental inhalation exposure, as some of the polyglyceryl fatty acid esters are used in cosmetic sprays and could possibly be inhaled. For example, Polyglyceryl-3 Distearate is reported to be used at 3% in spray body and hand creams. The Panel noted that droplets/particles from spray cosmetic products would not be respirable to any appreciable amount. Furthermore, droplets/particles deposited in the nasopharyngeal or bronchial regions of the respiratory tract present no toxicological concerns based on the chemical and biological properties of these ingredients. Coupled with the small actual exposure in the breathing zone and the concentrations at which the ingredients are used, the available information indicates that incidental inhalation would not be a significant route of exposure that might lead to local respiratory or systemic effects. A detailed discussion and summary of the Panel's approach to evaluating incidental inhalation exposures to ingredients in cosmetic products is available at http://www.cir-safety.org/cir-findings.

CONCLUSION

The CIR Expert Panel concluded that the 274 polyglyceryl fatty acid esters listed below are safe in cosmetics in the present practices of use and concentration described in this safety assessment when formulated to be non-irritating:

Adansonia Digitata Seed Oil Polyglyceryl-6 Esters*
Almond Oil/Polyglyceryl-10 Esters*
Apricot Kernel Oil Polyglyceryl-3 Esters*
Apricot Kernel Oil Polyglyceryl-4 Esters*
Apricot Kernel Oil Polyglyceryl-5 Esters*
Apricot Kernel Oil Polyglyceryl-6 Esters*
Apricot Kernel Oil Polyglyceryl-10 Esters*
Argan Oil Polyglyceryl-6 Esters*
Astrocaryum Vulgare Oil Polyglyceryl-6 Esters*
Avocado Oil Polyglyceryl-6 Esters*

Babassu Oil Polyglyceryl-4 Esters
Babassu Oil Polyglyceryl-6 Esters
Bertholletia Excelsa Seed Oil Polyglyceryl-6 Esters*
Borage Seed Oil Polyglyceryl-4 Esters*
Borage Seed Oil Polyglyceryl-6 Esters*
Candelilla/Jojoba/Rice Bran Polyglyceryl-3 Esters
Caprylic/Capric Glycerides Polyglyceryl-10 Esters
Carapa Guaianensis Oil Polyglyceryl-6 Esters*
Castor Oil Polyglyceryl-6 Esters*
Cocoa Butter Polyglyceryl-6 Esters*
Coconut Oil Polyglyceryl-6 Esters
Coffee Seed Oil Polyglyceryl-6 Esters*
Diisostearoyl Polyglyceryl-3 Dimer Dilinoleate
Glyceryl/Polyglyceryl-6 Isostearate/Behenate Esters
Hazelnut Seed Oil Polyglyceryl-6 Esters*
Linseed Oil Polyglyceryl-4 Esters*
Macadamia Seed Oil Polyglyceryl 6 Esters*
Macadamia Seed Oil Polyglyceryl 6 Esters Behenate
Mauritia Flexuosa Seed Oil Polyglyceryl-6 Esters*

Sunflower Seed Oil Polyglyceryl-4 Esters*
Sunflower Seed Oil Polyglyceryl-5 Esters*
Sunflower Seed Oil Polyglyceryl 6 Esters*
Sunflower Seed Oil Polyglyceryl 10 Esters*
Sweet Almond Oil Polyglyceryl-4 Esters*
Sweet Almond Oil Polyglyceryl-6 Esters*
Theobroma Grandiflorum Seed Butter Polyglyceryl-6 Esters*
Trichilia Emetica Seed Oil Polyglyceryl-6 Esters*
Triisostearoyl Polyglyceryl-3 Dimer Dilinoleate
Watermelon Seed Oil Polyglyceryl-6 Esters *
Watermelon Seed Oil Polyglyceryl-10 Esters*
Ximenia Americana Seed Oil Polyglyceryl-6 Esters*

*Not reported to be in current use. Were ingredients in this group not in current use to be used in the future, the expectation is that they would be used in product categories and at concentrations comparable to others in this group.

TABLES

Table 1. Polyglyceryl Fatty Acid Esters – presented alphabetically

Adansonia Digitata Seed Oil Polyglyceryl-6 Esters	Polyglyceryl-3 Di-Hydroxystearate
Almond Oil/Polyglyceryl-10 Esters	Polyglyceryl-3 Diisostearate
Apricot Kernel Oil Polyglyceryl-3 Esters	Polyglyceryl-3 Dioleate
Apricot Kernel Oil Polyglyceryl-4 Esters	Polyglyceryl-3 Distearate
Apricot Kernel Oil Polyglyceryl-5 Esters	Polyglyceryl-3 Isostearate
Apricot Kernel Oil Polyglyceryl-6 Esters	Polyglyceryl-3 Laurate
Apricot Kernel Oil Polyglyceryl-10 Esters	Polyglyceryl-3 Myristate
Argan Oil Polyglyceryl-6 Esters	Polyglyceryl-3 Oleate
Astrocaryum Vulgare Oil Polyglyceryl-6 Esters	Polyglyceryl-3 Palmitate
Avocado Oil Polyglyceryl-6 Esters	Polyglyceryl-3 Pentacaprylate/Caprate
Babassu Oil Polyglyceryl-4 Esters	Polyglyceryl-3 Pentaolivate
Babassu Oil Polyglyceryl-6 Esters	Polyglyceryl-3 Pentaricinoleate
Bertholletia Excelsa Seed Oil Polyglyceryl-6 Esters	Polyglyceryl-3 Rice Branate
Borage Seed Oil Polyglyceryl-4 Esters	Polyglyceryl-3 Ricinoleate
Borage Seed Oil Polyglyceryl-6 Esters	Polyglyceryl-3 Soyate/Shea Butterate
Candelilla/Jojoba/Rice Bran Polyglyceryl-3 Esters	Polyglyceryl-3 Stearate
Caprylic/Capric Glycerides Polyglyceryl-10 Esters	Polyglyceryl-3 Stearate SE
Carapa Guaianensis Oil Polyglyceryl-6 Esters	Polyglyceryl-3 Triisostearate
Castor Oil Polyglyceryl-6 Esters	Polyglyceryl-3 Triolivate
Cocoa Butter Polyglyceryl-6 Esters	Polyglyceryl-4 Almondate/Shea Butterate
Coconut Oil Polyglyceryl-6 Esters	Polyglyceryl-4 Caprate
Coffee Seed Oil Polyglyceryl-6 Esters	Polyglyceryl-4 Caprylate
Diisostearoyl Polyglyceryl-3 Dimer Dilinoleate	Polyglyceryl-4 Caprylate/Caprate
Glyceryl/Polyglyceryl-6 Isostearate/Behenate Esters	Polyglyceryl-4 Cocoate
Hazelnut Seed Oil Polyglyceryl-6 Esters	Polyglyceryl-4 Dilaurate
Linseed Oil Polyglyceryl-4 Esters	Polyglyceryl-4 Distearate
Macadamia Seed Oil Polyglyceryl-6 Esters	Polyglyceryl-4 Hazelnutseedate
Macadamia Seed Oil Polyglyceryl-6 Esters Behenate	Polyglyceryl-4 Isostearate
Mauritia Flexuosa Seed Oil Polyglyceryl-6 Esters	Polyglyceryl-4 Isostearate/Laurate
Olive Oil Polyglyceryl-3 Esters	Polyglyceryl-4 Laurate
Olive Oil Polyglyceryl-4 Esters	Polyglyceryl-4 Laurate/Sebacate
Olive Oil Polyglyceryl-6 Esters	Polyglyceryl-4 Laurate/Succinate
Palm Kernel Oil Polyglyceryl-4 Esters	Polyglyceryl-4 Oleate
Palm Oil Polyglyceryl-3 Esters	Polyglyceryl-4 Pentaoleate
Palm Oil Polyglyceryl-4 Esters	Polyglyceryl-4 Pentapalmitate/Stearate
Palm Oil Polyglyceryl-5 Esters	Polyglyceryl-4 Pentastearate
Palm Oil Polyglyceryl-6 Esters	Polyglyceryl-4 Punicate
Parinari Curatellifolia Oil Polyglyceryl-6 Esters	Polyglyceryl-4 Stearate
Pinus Sibirica Seed Oil Polyglyceryl-6 Esters	Polyglyceryl-4 Sweet Almondate
Polyglyceryl-2 Caprate	Polyglyceryl-4 Tristearate
Polyglyceryl-2 Caprylate	Polyglyceryl-5 Caprate
Polyglyceryl-2 Diisostearate	Polyglyceryl-5 Dicaprylate
Polyglyceryl-2 Dioleate	Polyglyceryl-5 Dilaurate
Polyglyceryl-2 Distearate	Polyglyceryl-5 Dioleate
Polyglyceryl-2 Isopalmitate	Polyglyceryl-5 Hexastearate
Polyglyceryl-2 Isopalmitate/Sebacate	Polyglyceryl-5 Isostearate
Polyglyceryl-2 Isostearate	Polyglyceryl-5 Laurate
Polyglyceryl-2 Laurate	Polyglyceryl-5 Myristate
Polyglyceryl-2 Myristate	Polyglyceryl-5 Oleate
Polyglyceryl-2 Oleate	Polyglyceryl-5 Pentamyristate
Polyglyceryl-2 Palmitate	Polyglyceryl-5 Ricinoleate
Polyglyceryl-2 Sesquicaprylate	Polyglyceryl-5 Stearate
Polyglyceryl-2 Sesquiisostearate	Polyglyceryl-5 Tribehenate
Polyglyceryl-2 Sesquioleate	Polyglyceryl-5 Triisostearate
Polyglyceryl-2 Sesquistearate	Polyglyceryl-5 Trimyristate
Polyglyceryl-2 Stearate	Polyglyceryl-5 Trioleate
Polyglyceryl-2 Tetrabehenate/ Macadamiate/Sebacate	Polyglyceryl-5 Tristearate
Polyglyceryl-2 Tetraisostearate	Polyglyceryl-6 Adansonia Digitata Seedate
Polyglyceryl-2 Tetraoleate	Polyglyceryl-6 Apricot Kernelate
Polyglyceryl-2 Tetrastearate	Polyglyceryl-6 Argan Kernelate
Polyglyceryl-2 Triisostearate	Polyglyceryl-6 Behenate
Polyglyceryl-3 Beeswax	Polyglyceryl-6 Caprate
Polyglyceryl-3 Behenate	Polyglyceryl-6 Caprylate
Polyglyceryl-3 Caprate	Polyglyceryl-6 Caprylate/Caprate
Polyglyceryl-3 Caprylate	Polyglyceryl-6 Citrullus Lanatus Seedate
Polyglyceryl-3 Cocoate	Polyglyceryl-6 Dicaprate
Polyglyceryl-3 Dicaprate	Polyglyceryl-6 Diisostearate
Polyglyceryl-3 Dicitrate/Stearate	Polyglyceryl-6 Dioleate
Polyglyceryl-3 Dicocoate	Polyglyceryl-6 Dipalmitate

Polyglyceryl-6 Distearate
Polyglyceryl-6 Heptacaprylate
Polyglyceryl-6 Hexaoleate
Polyglyceryl-6 Hexastearate
Polyglyceryl-6 Isostearate
Polyglyceryl-6 Laurate
Polyglyceryl-6 Myristate
Polyglyceryl-6 Octacaprylate
Polyglyceryl-6 Octastearate

Table 2. Polyglyceryl Fatty Acid Esters – arranged by polyglyceryl chain length

Polyglyceryl Multi-esters (i.e., not mono-esters and not "polyesters")

Polyglyceryl-2 discrete multi-esters
Polyglyceryl-2 Sesquicaprylate
Polyglyceryl-2 Sesquiisostearate
Polyglyceryl-2 Diisostearate
Polyglyceryl-2 Triisostearate
Polyglyceryl-2 Tetraisostearate
Polyglyceryl-2 Dioleate
Polyglyceryl-2 Sesquioleate
Polyglyceryl-2 Tetraoleate
Polyglyceryl-2 Sesquistearate
Polyglyceryl-2 Distearate
Polyglyceryl-2 Tetrastearate

Polyglyceryl-2 mixed multi-esters
Polyglyceryl-2 Tetrabehenate/ Macadamiate/Sebacate

Polyglyceryl-3 discrete multi-esters
Polyglyceryl-3 Dicaprate
Polyglyceryl-3 Diisostearate
Polyglyceryl-3 Triisostearate
Polyglyceryl-3 Dioleate
Polyglyceryl-3 Distearate
Polyglyceryl-3 Di-Hydroxystearate
Polyglyceryl-3 Pentaricinoleate

Polyglyceryl-3 mixed multi-esters
Diisostearoyl Polyglyceryl-3 Dimer Dilinoleate
Polyglyceryl-3 Dicitrate/Stearate
Polyglyceryl-3 Dicocoate
Polyglyceryl-3 Pentacaprylate/Caprate
Polyglyceryl-3 Pentaolivate
Polyglyceryl-3 Triolivate
Triisostearoyl Polyglyceryl-3 Dimer Dilinoleate

Polyglyceryl-4 discrete multi-esters
Polyglyceryl-4 Dilaurate
Polyglyceryl-4 Pentaoleate
Polyglyceryl-4 Distearate
Polyglyceryl-4 Tristearate
Polyglyceryl-4 Pentastearate

Polyglyceryl-4 mixed multi-esters
Polyglyceryl-4 Pentapalmitate/Stearate
Pumpkin Seed Oil Polyglyceryl-4 Esters
Pumpkin Seed Oil Polyglyceryl-4 Esters Succinate

Polyglyceryl-5 discrete multi-esters
Polyglyceryl-5 Dicaprylate
Polyglyceryl-5 Dilaurate
Polyglyceryl-5 Trimyristate
Polyglyceryl-5 Pentamyristate
Polyglyceryl-5 Triisostearate
Polyglyceryl-5 Dioleate
Polyglyceryl-5 Trioleate
Polyglyceryl-5 Tristearate
Polyglyceryl-5 Hexastearate
Polyglyceryl-5 Tribehenate

Polyglyceryl-6 discrete multi-esters
Polyglyceryl-6 Sesquicaprylate
Polyglyceryl-6 Dicaprate
Polyglyceryl-6 Tricaprylate
Polyglyceryl-6 Tetracaprylate
Polyglyceryl-6 Pentacaprylate
Polyglyceryl-6 Heptacaprylate
Polyglyceryl-6 Octacaprylate
Polyglyceryl-6 Dipalmitate
Polyglyceryl-6 Sesquiisostearate
Polyglyceryl-6 Diisostearate
Polyglyceryl-6 Dioleate
Polyglyceryl-6 Tetraoleate
Polyglyceryl-6 Pentaoleate
Polyglyceryl-6 Hexaoleate
Polyglyceryl-6 Sesquistearate
Polyglyceryl-6 Distearate
Polyglyceryl-6 Tristearate
Polyglyceryl-6 Pentastearate
Polyglyceryl-6 Hexastearate
Polyglyceryl-6 Octastearate
Polyglyceryl-6 Pentaricinoleate
Polyglyceryl-6 Tetrabehenate

Polyglyceryl-6 mixed multi-ester
Macadamia Seed Oil Polyglyceryl-6 Esters Behenate

Polyglyceryl-8 mixed multi-esters
Polyglyceryl-8 Decabehenate/Caprate
Polyglyceryl-8 Decaerucate/Decaisostearate/ Decaricinoleate

Polyglyceryl-10 discrete multi-esters
Polyglyceryl-10 Decaethylhexanoate
Polyglyceryl-10 Dodecacaprate
Polyglyceryl-10 Pentacaprylate
Polyglyceryl-10 Dodecacaprylate
Polyglyceryl-10 Tridecanoate
Polyglyceryl-10 Dilaurate
Polyglyceryl-10 Trilaurate
Polyglyceryl-10 Tetralaurate
Polyglyceryl-10 Pentalaurate
Polyglyceryl-10 Dimyristate
Polyglyceryl-10 Dipalmitate
Polyglyceryl-10 Diisostearate
Polyglyceryl-10 Triisostearate
Polyglyceryl-10 Pentaisostearate
Polyglyceryl-10 Hexaisostearate
Polyglyceryl-10 Nonaisostearate
Polyglyceryl-10 Decaisostearate
Polyglyceryl-10 Pentalinoleate
Polyglyceryl-10 Decalinoleate
Polyglyceryl-10 Dioleate
Polyglyceryl-10 Trioleate
Polyglyceryl-10 Tetraoleate
Polyglyceryl-10 Pentaoleate

Polyglyceryl-10 discrete multi-esters (con't)
Polyglyceryl-10 Pentaricinoleate
Polyglyceryl-10 Hexaoleate
Polyglyceryl-10 Heptaoleate
Polyglyceryl-10 Decaoleate
Polyglyceryl-10 Distearate
Polyglyceryl-10 Tristearate
Polyglyceryl-10 Pentastearate
Polyglyceryl-10 Pentahydroxystearate
Polyglyceryl-10 Heptahydroxystearate
Polyglyceryl-10 Heptastearate
Polyglyceryl-10 Decahydroxystearate
Polyglyceryl-10 Decastearate
Polyglyceryl-10 Dodecabehenate
Polyglyceryl-10 Trierucate
Polyglyceryl-10 Hexaerucate
Polyglyceryl-10 Nonaerucate

Polyglyceryl-10 mixed multi-esters
Polyglyceryl-10 Decamacadamiate
Polyglyceryl-10 Dicocoate
Polyglyceryl-10 Didecanoate
Polyglyceryl-10 Dodeca-Caprylate/ Caprate
Polyglyceryl-10 Hepta(Behenate/Stearate)
Polyglyceryl-10 Mono/Dioleate
Polyglyceryl-10 Sesquistearate
Polyglyceryl-10 Tetradecanedioate
Polyglyceryl-10 Tricocoate

Polyglyceryl-15 discrete multi-ester
Polyglyceryl-15 Diisostearate

Polyglyceryl-20 discrete multi-esters
Polyglyceryl-20 Hexacaprylate
Polyglyceryl-20 Heptacaprylate
Polyglyceryl-20 Octaisononanoate

Polyglyceryl-20 mixed multi-esters
Polyglyceryl-20 Docosabehenate/Isostearate
Polyglyceryl-20 Docosabehenate/Laurate
Polyglyceryl-20 Docosabehenate/Oleate
Polyglyceryl-20 Heptadecabehenate/Laurate
Polyglyceryl-20 Octadecabehenate/Laurate

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
	Polyglyceryl Monoesters	
Polyglyceryl-2 discrete esters		
Polyglyceryl-2 Caprate 156153-06-9	the ester of capric acid and diglycerin  wherein n is 2	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-2 Caprylate	the ester of caprylic acid and diglycerin  wherein n is 2	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-2 Laurate 96499-68-2	the ester of lauric acid and diglycerin  wherein n is 2	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-2 Myristate	the monoester of myristic acid and diglycerol  wherein n is 2	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-2 Isopalmitate	an ester of isopalmitic acid and diglycerin  wherein n is 2 (one example of an "iso")	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-2 Palmitate	the monoester of palmitic acid and diglycerol  wherein n is 2	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-2 Isostearate 73296-86-3 81752-33-2	the ester of isostearic acid and diglycerin  wherein n is 2 (one example of an "iso")	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-2 Oleate 49553-76-6 9007-48-1 (generic)	an ester of oleic acid and diglycerin  wherein n is 2	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-2 Stearate 12694-22-3 9009-32-9 (generic)	the ester of stearic acid and diglycerin  wherein n is 2	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-2 mixed esters		
Polyglyceryl-2 Isopalmitate/Sebacate	the mixed ester of isopalmitic acid, sebacic acid and diglycerin  wherein RC(O)- represents the residue of isopalmitic or sebacic acid, and n is 2	surfactant - emulsifying agent
Polyglyceryl-3 discrete esters		
Polyglyceryl-3 Caprate 133654-02-1 51033-30-8 74504-65-7	an ester of capric acid and polyglycerin-3  wherein n is 3	skin-conditioning agent - emollient; surfactant - emulsifying agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Polyglyceryl-3 Caprylate 108777-93-1	the ester of caprylic acid and polyglycerin-3  wherein n is 3	deodorant agent; surfactants - emulsifying agent
Polyglyceryl-3 Laurate 51033-31-9	the ester of lauric acid and polyglycerin-3  wherein n is 3	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-3 Myristate	the ester of myristic acid and polyglycerin-3  wherein n is 3	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-3 Palmitate	an ester of palmitic acid and polyglycerin-3  wherein n is 3	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-3 Isostearate 127512-63-4	the ester of isostearic acid and polyglycerin-3  wherein n is 3 (one example of an “iso”)	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-3 Oleate 33940-98-6 9007-48-1 (generic)	an ester of oleic acid and polyglycerin-3  wherein n is 3	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-3 Stearate 26855-43-6 27321-72-8 37349-34-1 (generic)	an ester of stearic acid and polyglycerin-3  wherein n is 3	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-3 Stearate SE	a self-emulsifying grade of polyglyceryl-3 stearate that contains some sodium and/or potassium stearate  wherein n is 3 and  wherein M is sodium or potassium	surfactant - emulsifying agent
Polyglyceryl-3 Ricinoleate 29894-35-7 (generic)	an ester of ricinoleic acid and polyglycerin-3  wherein n is 3	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-3 Behenate	the ester of behenic acid and polyglycerin-3  wherein n is 3	emulsion stabilizer; slip modifier; surface modifier

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Polyglyceryl-3 mixed esters		
Apricot Kernel Oil Polyglyceryl-3 Esters	the product obtained by the transesterification of prunus armeniaca (apricot) kernel oil and polyglycerin-3  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from prunus armeniaca (apricot) kernel oil, and n is 3	skin-conditioning agent - emollient; surfactant - emulsifying agent
Candelilla/Jojoba/Rice Bran Polyglyceryl-3 Esters	a product obtained by the transesterification of polyglycerin-3 and euphorbia cerifera (candelilla) wax, and simmondsia chinensis (jojoba) seed wax and oryza sativa (rice) bran wax  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from euphorbia cerifera (candelilla) wax, and simmondsia chinensis (jojoba) seed wax and oryza sativa (rice) bran wax, and n is 3	emulsion stabilizer; surfactant - emulsifying agent
Olive Oil Polyglyceryl-3 Esters	the product obtained by the transesterification of polyglycerin-3 and olea europaea (olive) fruit oil  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from olea europaea (olive) fruit oil, and n is 3	surfactant – emulsifying agent
Palm Oil Polyglyceryl-3 Esters	the product obtained by the transesterification of polyglycerin-3 and elaeis guineensis (palm) oil  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from elaeis guineensis (palm) oil, and n is 3	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-3 Beeswax 136097-93-3	an ester of beeswax fatty acids and polyglycerin-3  wherein RC(O)- represents the residue of beeswax fatty acids, and n is 3	surfactant – emulsifying agent
Polyglyceryl-3 Cocoate	the ester of coconut acid and polyglycerin-3  wherein RC(O)- represents the residue of coconut acid, and n is 3	surfactant – emulsifying agent
Polyglyceryl-3 Rice Branate	the monoester of polyglycerin-3 and rice bran acid  wherein RC(O)- represents the residue of rice bran acid, and n is 3	surfactant – emulsifying agent
Polyglyceryl-3 Soyate/Shea Butterate	an ester of a mixture of fatty acids derived from glycine soja (soybean) oil and butyrospermum parkii (shea) butter with polyglycerin-3  wherein RC(O)- represents the residue of the fatty acids obtained from glycine soja (soybean) oil and butyrospermum parkii (shea) butter, and n is 3	surfactant – emulsifying agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Rice Bran Oil Polyglyceryl-3 Esters	the product obtained by the transesterification of oryza sativa (rice) bran oil and polyglycerin-3  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from oryza sativa (rice) bran oil, and n is 3	surfactants - emulsifying agent
Shea Butter Polyglyceryl-3 Esters	the product obtained by the transesterification of polyglycerin-3 and butyrospermum parkii (shea) butter  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from butyrospermum parkii (shea) butter, and n is 3	emulsion stabilizer; hair conditioning agent; skin-conditioning agent – miscellaneous; surfactant - emulsifying agent; viscosity increasing agent - aqueous
Sunflower Seed Oil Polyglyceryl-3 Esters	the product obtained by the transesterification of helianthus annuus (sunflower) seed oil and polyglycerin-3  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from helianthus annuus (sunflower) seed oil, and n is 3	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-4 discrete esters		
Polyglyceryl-4 Caprate 160391-93-5 74504-65-7	the ester of capric acid and polyglycerin-4  wherein n is 4	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-4 Caprylate	the monoester of caprylic acid and polyglycerin-4  wherein n is 4	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-4 Laurate 75798-42-4; 74504-64-6 (generic);	the ester of lauric acid and polyglycerin-4  wherein n is 4	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-4 Isostearate 63705-03-3 91824-88-3	an ester of isostearic acid and polyglycerin-4  wherein n is 4 (one example of an “iso”)	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-4 Oleate 71012-10-7 9007-48-1 (generic)	an ester of oleic acid and polyglycerin-4  wherein n is 4	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-4 Stearate 26855-44-7 37349-34-1 (generic) 68004-11-5	an ester of stearic acid and polyglycerin-4  wherein n is 4	surfactant - emulsifying agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Polyglyceryl-4 mixed esters		
Apricot Kernel Oil Polyglyceryl-4 Esters	the product obtained by the transesterification of prunus armeniaca (apricot) kernel oil and polyglycerin-4  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from prunus armeniaca (apricot) kernel oil, and n is 4	skin-conditioning agent - emollient; surfactant - emulsifying agent
Babassu Oil Polyglyceryl-4 Esters	the product of the transesterification of orbignya oleifera seed oil and polyglycerin-4  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from orbignya oleifera seed oil, and n is 4	surfactant - solubilizing agent
Borage Seed Oil Polyglyceryl-4 Esters	the product obtained by the transesterification of borago officinalis seed oil and polyglycerin-4  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from borago officinalis seed oil, and n is 4	opacifying agent; surfactant - emulsifying agent; surfactant - solubilizing agent
Linseed Oil Polyglyceryl-4 Esters	the product obtained by the transesterification of linum usitatissimum (linseed) seed oil and polyglycerin-4  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from linum usitatissimum (linseed) seed oil, and n is 4	opacifying agent; surfactant - emulsifying agent; surfactant - solubilizing agent
Olive Oil Polyglyceryl-4 Esters	the product obtained by the transesterification of olea europaea (olive) fruit oil and polyglycerin-4  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from olea europaea (olive) fruit oil, and n is 4	surfactant - solubilizing agent
Palm Kernel Oil Polyglyceryl-4 Esters	is the product obtained by the transesterification of elaeis guineensis (palm) kernel oil and polyglycerin-4  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from elaeis guineensis (palm) kernel oil, and n is 4	opacifying agent; surfactant - emulsifying agent; surfactant - solubilizing agent
Palm Oil Polyglyceryl-4 Esters	the product obtained by the transesterification of polyglycerin-4 and elaeis guineensis (palm) oil  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from elaeis guineensis (palm) oil, and n is 4	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-4 Almondate/Shea Butterate	an ester of a mixture of fatty acids derived from almond oil and butyrospermum parkii (shea) butter with polyglycerin-4  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from butyrospermum parkii (shea) butter, and n is 4	surfactant - emulsifying agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Polyglyceryl-4 Caprylate/Caprate	the monoester of polyglycerin-4 and a mixture of caprylic and capric acids  wherein RC(O)- represents the residue of capric or caprylic acid, and n is 4	surfactant – hydrotrope; surfactant – solubilizing agent
Polyglyceryl-4 Cocoate	an ester of coconut acid and polyglycerin-4  wherein RC(O)- represents the residue of coconut acid, and n is 4	surfactant - emulsifying agent
Polyglyceryl-4 Hazelnutseedate	an ester of the fatty acids derived from corylus avellana (hazelnut) seed oil with polyglycerin-4  wherein RC(O)- represents the residue of the fatty acids derived from corylus avellana (hazelnut) seed oil, and n is 4	surfactant - emulsifying agent
Polyglyceryl-4 Isostearate/Laurate	the ester of a mixture of isostearic and lauric acids with polyglycerin-4  wherein RC(O)- represents the residue of isostearic or lauric acid, and n is 4	dispersing agent - nonsurfactant; emulsion stabilizer; surfactant - emulsifying agent; surfactant - foam booster
Polyglyceryl-4 Laurate/Sebacate	the monoester of polyglycerin-4 and a mixture of lauric and sebacic acids  wherein RC(O)- represents the residue of lauric or sebacic acid, and n is 4	surfactant – hydrotrope; surfactant – solubilizing agent
Polyglyceryl-4 Laurate/Succinate	the monoester of polyglycerin-4 and a mixture of lauric and succinic acids  wherein RC(O)- represents the residue of lauric or succinic acid, and n is 4	surfactant - emulsifying agent
Polyglyceryl-4 Punicate	the ester of polyglycerin-4 and punicic acid  wherein RC(O)- represents the residue of punicic acid, and n is 4	surfactant - emulsifying agent
Polyglyceryl-4 Sweet Almondate	an ester of the fatty acids derived from sweet almond oil and polyglycerin-4  wherein RC(O)- represents the residue of the fatty acids obtained from sweet almond oil, and n is 4	skin-conditioning agent - misc; surfactant - emulsifying agent
Shea Butter Polyglyceryl-4 Esters	the product obtained by the transesterification of butyrospermum parkii (shea) butter and polyglycerin-4  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from butyrospermum parkii (shea) butter, and n is 4	emulsion stabilizer; skin-conditioning agent – emollient
Sunflower Seed Oil Polyglyceryl-4 Esters	the product obtained by the transesterification of helianthus annuus (sunflower) seed oil and polyglycerin-4  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from helianthus annuus (sunflower) seed oil, and n is 4	skin-conditioning agent - emollient; surfactant - emulsifying agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Sweet Almond Oil Polyglyceryl-4 Esters 1072006-19-9 (generic)	the product obtained by the transesterification of prunus amygdalus dulcis (sweet almond) oil and polyglycerin-4  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from prunus amygdalus dulcis (sweet almond) oil, and n is 4	surfactants - solubilizing agent
Polyglyceryl-5 discrete esters		
Polyglyceryl-5 Caprate	the monoester of capric acid and polyglycerin-5  wherein n is 5	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-5 Laurate 128738-83-0; 74504-64-6 (generic)	the ester of lauric acid and a glycerin polymer containing an average of 5 glycerin units  wherein n is 5	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-5 Myristate	the monoester of myristic acid and a glycerin polymer containing 5 units of glycerin  wherein n is 5	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-5 Isostearate	the ester of isostearic acid and a glycerin polymer containing an average of 5 glycerin units  wherein n is 5 (one example of an “iso”)	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-5 Oleate 86529-98-8 9007-48-1 (generic)	the ester of oleic acid and a glycerin polymer containing an average of 5 glycerin units  wherein n is 5	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-5 Stearate 37349-34-1 (generic)	the monoester of stearic acid and a glycerin polymer containing 5 units of glycerin  wherein n is 5	surfactant - emulsifying agent
Polyglyceryl-5 Ricinoleate	is the product obtained by the reaction of ricinoleic acid with a glycerin polymer containing 5 glycerin units  wherein n is 5	surfactant - emulsifying agent
Polyglyceryl-5 mixed esters		
Apricot Kernel Oil Polyglyceryl-5 Esters	the product obtained by the transesterification of prunus armeniaca (apricot) kernel oil and polyglycerin-5  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from prunus armeniaca (apricot) kernel oil, and n is 5	skin-conditioning agent - emollient; surfactant - emulsifying agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Palm Oil Polyglyceryl-5 Esters	the product obtained by the transesterification of a glycerin polymer containing 5 units of glycerin and elaeis guineensis (palm) oil  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from elaeis guineensis (palm) oil, and n is 5	skin-conditioning agent - emollient; surfactant - emulsifying agent
Sunflower Seed Oil Polyglyceryl-5 Esters	the product obtained by the transesterification of helianthus annuus (sunflower) seed oil and a glycerin polymer containing 5 units of glycerin  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from helianthus annuus (sunflower) seed oil, and n is 5	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 discrete esters		
Polyglyceryl-6 Caprate	the monoester of capric acid and polyglycerin-6  wherein n is 6	surfactant - cleansing agent; surfactant - emulsifying agent
Polyglyceryl-6 Caprylate	the monoester of caprylic acid and polyglycerin-6  wherein n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Undecylenate	an ester of undecylenic acid and polyglycerin-6  wherein n is 6	surfactant - emulsifying agent
Polyglyceryl-6 Laurate 51033-38-6; 74504-64-6 (generic)	the ester of lauric acid and polyglycerin-6  wherein n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Myristate	the monoester of myristic acid and polyglycerin-6  wherein n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Palmitate 99734-31-3	the ester of palmitic acid and polyglycerin-6  wherein n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Isostearate 126928-07-2	the ester of isostearic acid and polyglycerin-6  wherein n is 6 (one example of an “iso”)	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Oleate 79665-92-2 9007-48-1 (generic)	the ester of oleic acid and polyglycerin-6  wherein n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Polyglyceryl-6 Stearate 95461-65-7	the ester of stearic acid and polyglycerin-6  wherein n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Ricinoleate 107615-51-0	the ester of polyglycerin-6 and ricinoleic acid  wherein n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Behenate	the monoester of behenic acid and polyglycerin-6  wherein n is 6	emulsion stabilizer; slip modifier; surface modifier
Polyglyceryl-6 mixed esters		
Adansonia Digitata Seed Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of adansonia digitata seed oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from adansonia digitata seed oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Apricot Kernel Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of prunus armeniaca (apricot) kernel oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from prunus armeniaca (apricot) kernel oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Argan Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of argania spinosa kernel oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from argania spinosa kernel oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Astrocaryum Vulgare Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of astrocaryum vulgare kernel oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from astrocaryum vulgare kernel oil, and n is 6	skin-conditioning agent - misc; surfactant - emulsifying agent
Avocado Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of persea gratissima (avocado) oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from persea gratissima (avocado) oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Babassu Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of orbignya oleifera seed oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from orbignya oleifera seed oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Bertholletia Excelsa Seed Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of bertholletia excelsa seed oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from bertholletia excelsa seed oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Borage Seed Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of borago officinalis seed oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from borago officinalis seed oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Carapa Guaianensis Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of carapa guaianensis seed oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from carapa guaianensis seed oil, and n is 6	skin-conditioning agent - emollient
Castor Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of ricinus communis (castor) seed oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from ricinus communis (castor) seed oil, and n is 6	skin-conditioning agent - emollient; skin conditioning agent – misc; surfactant - emulsifying agent
Cocoa Butter Polyglyceryl-6 Esters	the product obtained by the transesterification of theobroma cacao (cocoa) seed butter and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from theobroma cacao (cocoa) seed butter, and n is 6	skin-conditioning agent - emollient
Coconut Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of cocos nucifera (coconut) oil with polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from cocos nucifera (coconut) oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Coffee Seed Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of polyglycerin-6 and coffea arabica (coffee) seed oil  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from coffea arabica (coffee) seed oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Glyceryl/Polyglyceryl-6 Isostearate/Behenate Esters	the mixture of esters formed by the reaction of glycerin and polyglycerin-6 with isostearic acid and behenic acid  wherein RC(O)- represents the residue of isostearic or behenic acid, and n is 1 or 6	skin-conditioning agent - emollient

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Hazelnut Seed Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of corylus avellana (hazelnut) seed oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from corylus avellana (hazelnut) seed oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Macadamia Seed Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of macadamia ternifolia seed oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from macadamia ternifolia seed oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Mauritia Flexuosa Seed Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of the oil obtained from the seeds of *Mauritia flexuosa* and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from the seeds of *Mauritia flexuosa*, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Olive Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of olea europaea (olive) fruit oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from olea europaea (olive) fruit oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Palm Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of polyglycerin-6 and elaeis guineensis (palm) oil  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from elaeis guineensis (palm) oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Parinari Curatellifolia Oil Polyglyceryl-6 Esters	the product of the transesterification of the oil obtained from the seeds of *Parinari curatellifolia* and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from the seeds of *Parinari curatellifolia*, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Pinus Sibirica Seed Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of pinus sibirica seed oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from pinus sibirica seed oil, and n is 6	surfactant - emulsifying agent
Polyglyceryl-6 Adansonia Digitata Seedate	the ester of the fatty acids obtained from adansonia digitata seed oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from adansonia digitata seed oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Polyglyceryl-6 Apricot Kernelate	the ester of the fatty acids derived from prunus armeniaca (apricot) kernel oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from prunus armeniaca (apricot) kernel oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Argan Kernelate	the ester of polyglycerin-6 and the fatty acids obtained from argania spinosa kernel oil  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from argania spinosa kernel oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Caprylate/Caprate	the monoester of polyglycerin-6 and a mixture of caprylic and capric acids  wherein RC(O)- represents the residue of capric or caprylic acid, and n is 6	surfactant - hydrotrope; surfactant - solubilizing agent
Polyglyceryl-6 Citrullus Lanatus Seedate	the ester of the fatty acids derived from citrullus lanatus (watermelon) seed oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from citrullus lanatus (watermelon) seed oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Palmitate/Succinate	the monoester of polyglycerin-6 and a mixture of palmitic and succinic acids  wherein RC(O)- represents the residue of palmitic or succinic acid, and n is 6	surfactant - emulsifying agent
Polyglyceryl-6 Schinziophyton Rautanenii Kernelate	the ester of polyglycerin-6 and the fatty acids obtained from schinziophyton rautanenii kernel oil  wherein RC(O)- represents the residue of the fatty acids obtained from schinziophyton rautanenii kernel oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Sclerocarya Birrea Seedate	the ester of polyglycerin-6 and the fatty acids obtained sclerocarya birrea seed oil  wherein RC(O)- represents the residue of the fatty acids obtained from sclerocarya birrea seed oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Trichilia Emetica Seedate	the ester of polyglycerin-6 and the fatty acids obtained from trichilia emetica seed butter  wherein RC(O)- represents the residue of the fatty acids obtained from trichilia emetica seed butter, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Ximenia Americana Seedate	the ester of polyglycerin-6 and the fatty acids obtained from ximenia americana seed oil  wherein RC(O)- represents the residue of the fatty acids obtained from ximenia americana seed oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Rosa Rubiginosa Seed Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of rosa rubiginosa seed oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from rosa rubiginosa seed oil, and n is 6	skin-conditioning agent - emollient; skin-conditioning agent - miscellaneous; surfactant - emulsifying agent
Safflower Seed Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of carthamus tinctorius (safflower) seed oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from carthamus tinctorius (safflower) seed oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Schinziophyton Rautanenii Kernel Oil Polyglyceryl-6 Esters	the product formed by the transesterification of schinziophyton rautanenii kernel oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from schinziophyton rautanenii kernel oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Sclerocarya Birrea Seed Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of sclerocarya birrea seed oil with polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from sclerocarya birrea seed oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Sesame Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of sesamum indicum (sesame) oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from sesamum indicum (sesame) oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Shea Butter Polyglyceryl-6 Esters	the product obtained by the transesterification of butyrospermum parkii (shea) butter and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from butyrospermum parkii (shea) butter, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Soybean Oil Polyglyceryl-6 Esters	the product of the transesterification of glycine soja (soybean) oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from glycine soja (soybean) oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Sunflower Seed Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of helianthus annuus (sunflower) seed oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from helianthus annuus (sunflower) seed oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Sweet Almond Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of prunus amygdalus dulcis (sweet almond) oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from prunus amygdalus dulcis (sweet almond) oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Theobroma Grandiflorum Seed Butter Polyglyceryl-6 Esters	the product obtained by the transesterification of theobroma grandiflorum seed butter and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from theobroma grandiflorum seed butter, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Trichilia Emetica Seed Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of trichilia emetica seed butter and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from trichilia emetica seed butter, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Watermelon Seed Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of citrullus lanatus (watermelon) seed oil with polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from citrullus lanatus (watermelon) seed oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Ximenia Americana Seed Oil Polyglyceryl-6 Esters	the product obtained by the transesterification of ximenia americana seed oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from ximenia americana seed oil, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-8 discrete esters		
Polyglyceryl-8 Oleate 75719-56-1 9007-48-1 (generic)	an ester of oleic acid and a glycerin polymer containing an average of 8 glycerin units  wherein n is 8	skin-conditioning agent – misc.; surfactant - emulsifying agent
Polyglyceryl-8 Stearate 37349-34-1 (generic) 75719-57-2	an ester of stearic acid and a glycerin polymer containing an average of 8 glycerin units  wherein n is 8	surfactant - emulsifying agent
Polyglyceryl-8 mixed esters		
Polyglyceryl-8 C12-20 Acid Ester	the ester of a glycerin polymer containing 8 units of glycerin and a synthetic mixture of saturated acids containing 12 to 20 carbons in the alkyl chain  wherein RC(O)- represents the residue of a fatty acid containing 12 to 20 carbons in the alkyl chain, and n is 8	surfactant - emulsifying agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Polyglyceryl-10 discrete esters		
Polyglyceryl-10 Caprate	the ester of capric acid and polyglycerin-10  wherein n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Caprylate 51033-41-1	the monoester of caprylic acid and polyglycerin-10  wherein n is 10	surfactant - emulsifying agent
Polyglyceryl-10 Undecylenate	an ester of Undecylenic Acid and polyglycerin-10  wherein n is 10	surfactant - emulsifying agent
Polyglyceryl-10 Laurate 34406-66-1 74504-64-6 (generic)	an ester of lauric acid and polyglycerin-10  wherein n is 10	skin-conditioning agent - misc; surfactant - emulsifying agent
Polyglyceryl-10 Myristate 87390-32-7	an ester of myristic acid and polyglycerin-10  wherein n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Palmitate 79777-31-4	the ester of palmitic acid and polyglycerin-10  wherein n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Isostearate 133738-23-5	the ester of isostearic acid and polyglycerin-10  wherein n is 10 (one example of an "iso")	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Linoleate	the monoester of linoleic acid and polyglycerin-10  wherein n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Oleate 79665-93-3 9007-48-1 (generic)	an ester of oleic acid and polyglycerin-10  wherein n is 10	skin-conditioning agent - misc; surfactant - emulsifying agent
Polyglyceryl-10 Stearate 79777-30-3 9009-32-9 (generic)	an ester of stearic acid and polyglycerin-10  wherein n is 10	skin-conditioning agent - misc; surfactant - emulsifying agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Polyglyceryl-10 mixed esters		
Almond Oil/Polyglyceryl-10 Esters	the product obtained by the transesterification of prunus amygdalus dulcis (sweet almond) oil and polyglycerin-10  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from prunus amygdalus dulcis (sweet almond) oil, and n is 10	surfactant - emulsifying agent
Apricot Kernel Oil Polyglyceryl-10 Esters	the product obtained by the transesterification of prunus armeniaca (apricot) kernel oil and polyglycerin-10  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from prunus armeniaca (apricot) kernel oil, and n is 10	skin-conditioning agent - emollient; surfactant – emulsifying agent
Caprylic/Capric Glycerides Polyglyceryl-10 Esters	the product obtained by the transesterification of caprylic/capric glycerides with polyglycerin-10  wherein RC(O)- represents the residue of caprylic or capric acid, and n is 10	skin-conditioning agent - emollient; surfactant – emulsifying agent; surfactant - solubilizing agent
Polyglyceryl-10 Apricot Kernelate	the ester of the fatty acids derived from prunus armeniaca (apricot) kernel oil and polyglycerin-10  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from prunus armeniaca (apricot) kernel oil, and n is 10	skin-conditioning agent - emollient; skin-conditioning agent – miscellaneous; surfactant - emulsifying agent
Polyglyceryl-10 Behenate/Eicosadioate	the monoester of polyglycerin-10 and a blend of behenic and eicosadioic acids  wherein RC(O)- represents the residue of behenic or eicosadioic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Caprylate/Caprate	the monoester of polyglycerin-10 and a blend of caprylic and capric acids  wherein RC(O)- represents the residue of capric or caprylic acid, and n is 10	emulsion stabilizer; solvent; surfactant – emulsifying agent
Polyglyceryl-10 Cocoate	the ester of coconut acid and polyglycerin-10  wherein RC(O)- represents the residue of coconut acid, and n is 10	surfactant-cleansing agent; surfactant-emulsifying agent
Polyglyceryl-10 Eicosanedioate/Tetradecanedioate	the ester of polyglycerin-10 with a mixture of eicosanedioic and tetradecanedioic acids  wherein RC(O)- represents the residue of eicosanedioic or tetradecanedioic acid, and n is 10	hair conditioning agent; skin conditioning agent - occlusive
Polyglyceryl-10 Hydroxystearate/ Stearate/Eicosadioate	the monoester of polyglycerin-10 with a blend of hydroxystearic, stearic and eicosandioic acids  wherein RC(O)- represents the residue of hydroxystearic, stearic and eicosandioic acids, and n is 10	skin-conditioning agent - emollient

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Polyglyceryl-10 Palmate	the ester of palm acid and polyglycerin-10  wherein RC(O)- represents the residue of palm acid, and n is 10	skin-conditioning agent - misc; surfactant - emulsifying agent
Sclerocarya Birrea Seed Oil Polyglyceryl-10 Esters	the product obtained by the transesterification of sclerocarya birrea seed oil with polyglycerin-10  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from sclerocarya birrea seed oil, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Sunflower Seed Oil Polyglyceryl-10 Esters	the product obtained by the transesterification of helianthus annuus (sunflower) seed oil and polyglycerin-10  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from helianthus annuus (sunflower) seed oil, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Watermelon Seed Oil Polyglyceryl-10 Esters	the product obtained by the transesterification of citrullus lanatus (watermelon) seed oil with polyglycerin-10  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from citrullus lanatus (watermelon) seed oil, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl Multi-esters (i.e., not mono-esters and not "polyesters")		
Polyglyceryl-2 discrete multi-esters		
Polyglyceryl-2 Sesquicaprylate	a mixture of mono- and diesters of caprylic acid and diglycerin  wherein R- represents hydrogen or the residue of caprylic acid, and n is 2	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-2 Sesquiisostearate 170211-20-8	a mixture of mono and diesters of isostearic acid and diglycerin  wherein R- represents hydrogen or the residue of isostearic acid, and n is 2	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-2 Diisostearate 63705-03-3 (generic) 67938-21-0	the diester of isostearic acid and diglycerin  wherein RC(O)- represents the residue of isostearic acid, and n is 2	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-2 Triisostearate 120486-24-0	the triester of isostearic acid and diglycerin  wherein R- represents hydrogen or the residue of isostearic acid, and n is 2	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-2 Tetraisostearate 121440-30-0	the tetraester of isostearic acid and a dimer of glycerin  wherein RC(O)- represents the residue of isostearic acid, and n is 2	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-2 Dioleate 60219-68-3 67965-56-4	a diester of oleic acid and diglycerin  wherein RC(O)- represents the residue of oleic acid, and n is 2	skin-conditioning agent - emollient; surfactant - emulsifying agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Polyglyceryl-2 Sesquioleate	a mixture of mono and diesters of oleic acid and diglycerin  wherein R- represents hydrogen or the residue of oleic acid, and n is 2	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-2 Tetraoleate	the tetraester of oleic acid and diglycerin  wherein RC(O)- represents the residue of oleic acid, and n is 2	skin-conditioning agent - misc; surfactant - emulsifying agent
Polyglyceryl-2 Sesquistearate 9009-32-9 (generic)	a mixture of mono- and diesters of stearic acid and diglycerin  wherein R- represents hydrogen or the residue of stearate acid, and n is 2	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-2 Distearate 61725-93-7 9009-32-9 (generic)	the diester of stearic acid and diglycerin  wherein RC(O)- represents the residue of stearic acid, and n is 2	surfactant - emulsifying agent
Polyglyceryl-2 Tetrastearate 72347-89-8 9009-32-9 (generic)	the tetraester of stearic acid and diglycerin  wherein RC(O)- represents the residue of stearic acid, and n is 2	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-2 mixed multi-esters		
Polyglyceryl-2 Tetrabehenate/ Macadamiate/Sebacate	the tetraester of a mixture of behenic, sebacic and macadamia acids with a dimer of glycerin  wherein RC(O)- represents the residue of behenic, sebacic, or macadamia acid, and n is 2	skin-conditioning agent - emollient
Polyglyceryl-3 discrete multi-esters		
Polyglyceryl-3 Dicaprate	the diester of capric acid and polyglycerin-3  wherein RC(O)- represents the residue of capric acid, and n is 3	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-3 Diisostearate 63705-03-3 (generic) 66082-42-6	a diester of isostearic acid and polyglycerin-3  wherein RC(O)- represents the residue of isostearic acid, and n is 3	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-3 Triisostearate 66082-43-7	the triester of isostearic acid and polyglycerin-3  wherein R- represents hydrogen or the residue of isostearic acid, and n is 3	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-3 Dioleate 79665-94-4	a diester of oleic acid and polyglycerin-3  wherein RC(O)- represents the residue of oleic acid, and n is 3	skin-conditioning agent - emollient; surfactant - emulsifying agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Polyglyceryl-3 Distearate 94423-19-5 9009-32-9 (generic) 61725-93-7 (generic)	the diester of stearic acid and polyglycerin-3  wherein RC(O)- represents the residue of stearic acid, and n is 3	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-3 Di-Hydroxystearate	the diester of hydroxystearic acid and polyglycerin-3  wherein RC(O)- represents the residue of hydroxystearic acid, and n is 3	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-3 Pentaricinoleate	the pentaester of ricinoleic acid and polyglycerin-3  wherein RC(O)- represents the residue of ricinoleic acid, and n is 3	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-3 mixed multi-esters		
Diisostearoyl Polyglyceryl-3 Dimer Dilinoleate	the diester of dilinoleic acid and Polyglyceryl-3 Diisostearate  wherein R- represents the residue of isostearic acid or dilinoleic acid, and n is 3	skin-conditioning agent - emollient
Polyglyceryl-3 Dicitrate/Stearate	the diester of polyglycerin-3 with a mixture of citric acid and stearic acid  wherein RC(O)- represents the residue of citric or stearic acid, and n is 3	surfactant - emulsifying agent
Polyglyceryl-3 Dicocoate	the diester of coconut acid and polyglycerin-3  wherein RC(O)- represents the residue of coconut acid, and n is 3	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-3 Pentacaprylate/Caprate	the pentaester of a mixture of caprylic acid and capric acid with polyglycerin-3  wherein R- represents hydrogen or the residue of capric or caprylic acid, and n is 3	skin-conditioning agent - emollient; surfactant - emulsifying agent; surfactant – solubilizing agent
Polyglyceryl-3 Pentaolivate	is the pentaester of polyglycerin-3 and olive acid  wherein RC(O)- represents the residue of olive acid, and n is 3	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-3 Triolivate	the triester of polyglycerin-3 and olive acid  wherein R- represents hydrogen or the residue of olive acid, and n is 3	surfactant - emulsifying agent
Triisostearoyl Polyglyceryl-3 Dimer Dilinoleate	the diester of dilinoleic acid and polyglyceryl-3 triisostearate  wherein R- represents the residue of isostearic acid or dilinoleic acid, and n is 3	skin-conditioning agent - emollient

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Polyglyceryl-4 discrete multi-esters		
Polyglyceryl-4 Dilaurate	the diester of lauric acid and polyglycerin-4  wherein RC(O)- represents the residue of lauric acid, and n is 4	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-4 Pentaoleate 103230-29-1	the pentaester of oleic acid and polyglycerin-4  wherein R- represents hydrogen or the residue of oleic acid, and n is 4	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-4 Distearate	a diester of polyglycerin-4 with stearic acid  wherein RC(O)- represents the residue of stearic acid, and n is 4	surfactant - emulsifying agent
Polyglyceryl-4 Tristearate 99734-29-9	the triester of stearic acid and polyglycerin-4  wherein R- represents hydrogen or the residue of stearic acid, and n is 4	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-4 Pentastearate 99570-00-0	the pentaester of stearic acid and polyglycerin-4  wherein R- represents hydrogen or the residue of stearic acid, and n is 4	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-4 mixed multi-esters		
Polyglyceryl-4 Pentapalmitate/Stearate	the pentaester of a mixture of palmitic acid and stearic acid with polyglycerin-4  wherein R- represents hydrogen or the residue of palmitic or stearic acid, and n is 4	surfactant - emulsifying agent
Pumpkin Seed Oil Polyglyceryl-4 Esters	the complex mixture of esters formed by the transesterification of cucurbita pepo (pumpkin) seed oil and polyglycerin-4  wherein R- represents hydrogen or the residue of the fatty acids derived from cucurbita pepo (pumpkin) seed oil (via transesterification), and n is 4	emulsion stabilizer; surfactant - emulsifying agent
Pumpkin Seed Oil Polyglyceryl-4 Esters Succinate	the complex mixture of esters formed by the transesterification of cucurbita pepo (pumpkin) seed oil and polyglycerin-4 reacted with succinic acid  wherein R- represents hydrogen or the residue of succinic acid or the fatty acids derived from cucurbita pepo (pumpkin) seed oil (via transesterification), and n is 4	emulsion stabilizer; surfactant - emulsifying agent
Polyglyceryl-5 discrete multi-esters		
Polyglyceryl-5 Dicaprylate 108777-93-1 (generic)	the diester of caprylic acid with a glycerin polymer containing 5 glycerin units  wherein RC(O)- represents the residue of caprylic acid, and n is 5	skin-conditioning agent - emollient; surfactant – cleansing agent; surfactant - emulsifying agent
Polyglyceryl-5 Dilaurate	the diester of lauric acid and a glycerin polymer containing 5 units of glycerin  wherein RC(O)- represents the residue of lauric acid, and n is 5	surfactant - emulsifying agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Polyglyceryl-5 Trimyristate	the triester of myristic acid and a glycerin polymer containing 5 units of glycerin  wherein R- represents hydrogen or the residue of myristic acid, and n is 5	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-5 Pentamyristate	the pentaester of myristic acid and a glycerin polymer containing 5 units of glycerin  wherein R- represents hydrogen or the residue of myristic acid, and n is 5	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-5 Triisostearate	the triester of isostearic acid and a glycerin polymer containing 5 units of glycerin  wherein R- represents hydrogen or the residue of isostearic acid, and n is 5	surfactant – cleansing agent; surfactant – dispersing agent; surfactant - emulsifying agent
Polyglyceryl-5 Dioleate	the diester of oleic acid and a glycerin polymer containing 5 units of glycerin  wherein RC(O)- represents the residue of oleic acid, and n is 5	surfactant - emulsifying agent
Polyglyceryl-5 Trioleate	the triester of oleic acid and a glycerin polymer containing 5 units of glycerin  wherein R- represents hydrogen or the residue of oleic acid, and n is 5	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-5 Tristearate 9009-32-9 (generic)	the triester of stearic acid and a glycerin polymer containing 5 units of glycerin  wherein R- represents hydrogen or the residue of stearic acid, and n is 5	surfactant – cleansing agent; surfactant – dispersing agent; surfactant - emulsifying agent
Polyglyceryl-5 Hexastearate	the hexaester of stearic acid and a glycerin polymer containing 5 units of glycerin  wherein R- represents hydrogen or the residue of stearic acid, and n is 5	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-5 Tribehenate	the triester of behenic acid and a glycerin polymer containing 5 units of glycerin  wherein R- represents hydrogen or the residue of behenic acid, and n is 5	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 discrete multi-esters		
Polyglyceryl-6 Sesquicaprylate 108777-93-1 (generic) 946492-22-4 (generic) 946492-23-5 (generic)	a mixture of mono- and diesters of caprylic acid and polyglycerin-6  wherein R- represents hydrogen or the residue of caprylic acid, and n is 6	skin-conditioning agent - emollient; surfactant – cleansing agent; surfactant - emulsifying agent
Polyglyceryl-6 Dicaprate	the diester of capric acid and polyglycerin-6  wherein RC(O)- represents the residue of capric acid, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Tricaprylate	the triester of caprylic acid and polyglycerin-6  wherein R- represents hydrogen or the residue of caprylic acid, and n is 6	surfactant – cleansing agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Polyglyceryl-6 Tetracaprylate	the tetraester of caprylic acid and polyglycerin-6  wherein R- represents hydrogen or the residue of caprylic acid, and n is 6	surfactant – cleansing agent
Polyglyceryl-6 Pentacaprylate	the pentaester of caprylic acid and polyglycerin-6  wherein R- represents hydrogen or the residue of caprylic acid, and n is 6	surfactant – cleansing agent
Polyglyceryl-6 Heptacaprylate	the heptaester of caprylic acid and polyglycerin-6  wherein R- represents hydrogen or the residue of caprylic acid, and n is 6	surfactant - emulsifying agent
Polyglyceryl-6 Octacaprylate	the octaester of polyglycerin-6 and caprylic acid  wherein RC(O)- represents the residue of caprylic acid, and n is 6	skin-conditioning agent - emollient
Polyglyceryl-6 Dipalmitate	the diester of palmitic acid and polyglycerin-6  wherein RC(O)- represents the residue of palmitic acid, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Sesquiisostearate	a mixture of mono- and diesters of isostearic acid and polyglycerin-6  wherein R- represents hydrogen or the residue of isostearic acid, and n is 6	surfactant - emulsifying agent
Polyglyceryl-6 Diisostearate	the diester of isostearic acid and polyglycerin-6  wherein RC(O)- represents the residue of isostearic acid, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Dioleate 76009-37-5	a diester of oleic acid and polyglycerin-6  wherein RC(O)- represents the residue of oleic acid, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Tetraoleate 128774-95-8	the tetraester of Oleic Acid and polyglycerin-6  wherein R- represents hydrogen or the residue of oleic acid, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Pentaoleate 104934-17-0	the pentaester of oleic acid and polyglycerin-6  wherein R- represents hydrogen or the residue of oleic acid, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Hexaoleate 95482-05-6	a hexaester of oleic acid and polyglycerin-6  wherein R- represents hydrogen or the residue of oleic acid, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Sesquistearate 112939-69-2	a mixture of mono- and diesters of stearic acid and polyglycerin-6  wherein R- represents hydrogen or the residue of stearic acid, and n is 6	surfactant - emulsifying agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Polyglyceryl-6 Distearate 34424-97-0 9009-32-9 (generic)	a diester of stearic acid and polyglycerin-6  wherein RC(O)- represents the residue of stearic acid, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Tristearate 71185-87-0 9009-32-9 (generic)	the triester of stearic acid and polyglycerin-6  wherein R- represents hydrogen or the residue of stearic acid, and n is 6	surfactant - emulsifying agent
Polyglyceryl-6 Pentastearate 9009-32-9 (generic) 99734-30-2	the pentaester of stearic acid and polyglycerin-6  wherein R- represents hydrogen or the residue of stearic acid, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Hexastearate	the hexaester of stearic acid and polyglycerin-6  wherein R- represents hydrogen or the residue of stearic acid, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Octastearate	the octaester of stearic acid and polyglycerin-6  wherein RC(O)- represents the residue of stearic acid, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Pentaricinoleate	the pentaester of ricinoleic acid and polyglycerin-6  wherein R- represents hydrogen or the residue of ricinoleic acid, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 Tetrabehenate	the tetraester of behenic acid and polyglycerin-6  wherein R- represents hydrogen or the residue of behenic acid, and n is 6	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-6 mixed multi-ester		
Macadamia Seed Oil Polyglyceryl-6 Esters Behenate	the behenic acid ester of the product obtained by the transesterification of macadamia seed oil and polyglycerin-6  wherein RC(O)- represents the residue of fatty acids derived (via transesterification) from macadamia ternifolia seed oil, and n is 6	skin-conditioning agent - emollient
Polyglyceryl-8 mixed multi-esters		
Polyglyceryl-8 Decabehenate/Caprate	the decaester of a mixture of behenic acid and capric acid with a glycerin polymer containing 8 units of glycerin  wherein RC(O)- represents the residue of capric or behenic acid, and n is 8	viscosity increasing agent - nonaqueous
Polyglyceryl-8 Decaerucate/Decaisostearate/ Decaricinoleate	the decaester of a glycerin polymer containing 8 units of glycerin with a mixture of erucic acid, isostearic acid and ricinoleic acid  wherein RC(O)- represents the residue of erucic, isostearic, or ricinoleic acid, and n is 8	skin-conditioning agent - emollient

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Polyglyceryl-10 discrete multi-esters		
Polyglyceryl-10 Decaethylhexanoate	the decaester of 2-ethylhexanoic acid and polyglycerin-10  wherein RC(O)- represents the residue of 2-ethylhexanoic acid, and n is 10	skin conditioning agent - humectant
Polyglyceryl-10 Dodecacaprate	the dodecaester of capric acid and polyglycerin-10  wherein RC(O)- represents the residue of capric acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Pentacaprylate	the pentaester of caprylic acid and polyglycerin-10  wherein R- represents hydrogen or the residue of caprylic acid, and n is 10	surfactant – cleansing agent; surfactant - emulsifying agent; surfactant – solubilizing agent
Polyglyceryl-10 Dodecacaprylate	the dodecaester of caprylic acid and polyglycerin-10  wherein RC(O)- represents the residue of caprylic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Tridecanoate 217782-56-4	the triester of decanoic acid and polyglycerin-10  wherein R- represents hydrogen or the residue of decanoic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Dilaurate	the diester of lauric acid and polyglycerin-10  wherein RC(O)- represents the residue of lauric acid, and n is 10	surfactant – cleansing agent
Polyglyceryl-10 Trilaurate	the triester of lauric acid and polyglycerin-10  wherein R- represents hydrogen or the residue of lauric acid, and n is 10	surfactant – cleansing agent
Polyglyceryl-10 Tetralaurate	the tetraester of lauric acid and polyglycerin-10  wherein R- represents hydrogen or the residue of lauric acid, and n is 10	surfactant – cleansing agent
Polyglyceryl-10 Pentalaurate	the pentaester of lauric acid and polyglycerin-10  wherein R- represents hydrogen or the residue of lauric acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Dimyristate	the diester of myristic acid and polyglycerin-10  wherein RC(O)- represents the residue of myristic acid, and n is 10	surfactant - emulsifying agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Polyglyceryl-10 Dipalmitate	the diester of palmitic acid and polyglycerin-10  wherein RC(O)- represents the residue of palmitic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Diisostearate 102033-55-6 63705-03-3 (generic)	a diester of isostearic acid and polyglycerin-10  wherein RC(O)- represents the residue of isostearic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Triisostearate	the triester of polyglycerin-10 and isostearic acid  wherein R- represents hydrogen or the residue of isostearic acid, and n is 10	surfactant - emulsifying agent
Polyglyceryl-10 Pentaisostearate	the pentaester of isostearic acid and polyglycerin-10  wherein R- represents hydrogen or the residue of isostearic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Hexaisostearate	the hexaester of polyglycerin-10 and isostearic acid  wherein R- represents hydrogen or the residue of isostearic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Nonaisostearate	the nonaester of polyglycerin-10 and isostearic acid  wherein R- represents hydrogen or the residue of isostearic acid, and n is 10	skin-conditioning agent - emollient
Polyglyceryl-10 Decaisostearate	the ester of polyglycerin-10 and isostearic acid  wherein RC(O)- represents the residue of isostearic acid, and n is 10	skin-conditioning agent - emollient
Polyglyceryl-10 Pentalinoleate	the pentaester of linoleic acid and polyglycerin-10  wherein R- represents hydrogen or the residue of linoleic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Decalinoleate 68900-96-9	a decaester of linoleic acid and polyglycerin-10  wherein RC(O)- represents the residue of linoleic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Dioleate 33940-99-7	a diester of oleic acid and polyglycerin-10  wherein RC(O)- represents the residue of oleic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Trioleate 102051-00-3	the triester of oleic acid and polyglycerin-10  wherein R- represents hydrogen or the residue of oleic acid, and n is 10	surfactant - emulsifying agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Polyglyceryl-10 Tetraoleate 34424-98-1	a tetraester of oleic acid and polyglycerin-10  wherein R- represents hydrogen or the residue of oleic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Pentaoleate 86637-84-5	the pentaester of oleic acid and polyglycerin-10  wherein R- represents hydrogen or the residue of oleic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Pentaricinoleate	the pentaester of ricinoleic acid and polyglycerin-10  wherein R- represents hydrogen or the residue of ricinoleic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Hexaoleate 65573-03-7	the hexaester of oleic acid and polyglycerin-10  wherein R- represents hydrogen or the residue of oleic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Heptaoleate 103175-09-3	a heptaester of oleic acid and polyglycerin-10  wherein R- represents hydrogen or the residue of oleic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Decaoleate 11094-60-3	a decaester of oleic acid and polyglycerin-10  wherein RC(O)- represents the residue of oleic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Distearate 12764-60-2 9009-32-9 (generic)	the diester of stearic acid and polyglycerin-10  wherein RC(O)- represents the residue of stearic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Tristearate 12709-64-7 9009-32-9 (generic)	the triester of stearic acid and polyglycerin-10  wherein R- represents hydrogen or the residue of stearic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Pentastearate 9009-32-9 (generic) 95461-64-6	a pentaester of stearic acid and polyglycerin-10  wherein R- represents hydrogen or the residue of stearic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Pentahydroxystearate	the pentaester of hydroxystearic acid and polyglycerin-10  wherein R- represents hydrogen or the residue of hydroxystearic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Heptahydroxystearate	a heptaester of hydroxystearic acid and polyglycerin-10  wherein R- represents hydrogen or the residue of hydroxystearic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Polyglyceryl-10 Heptastearate 99126-54-2 9009-32-9 (generic)	the heptaester of stearic acid and polyglycerin-10  wherein R- represents hydrogen or the residue of stearic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Decahydroxystearate	the decaester of hydroxystearic acid and polyglycerin-10  wherein RC(O)- represents the residue of hydroxystearic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Decastearate 39529-26-5	a decaester of stearic acid and polyglycerin-10  wherein RC(O)- represents the residue of stearic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Dodecabehenate	the dodecaester of behenic acid and polyglycerin-10  wherein RC(O)- represents the residue of behenic, and n is 10	surfactant - emulsifying agent
Polyglyceryl-10 Trierucate	the triester of polyglycerin-10 and erucic acid  wherein R- represents hydrogen or the residue of erucic acid, and n is 10	surfactant – dispersing agent; surfactant - emulsifying agent
Polyglyceryl-10 Hexaerucate	the hexaester of polyglycerin-10 and erucic acid  wherein R- represents hydrogen or the residue of erucic acid, and n is 10	surfactant – dispersing agent; surfactant - emulsifying agent
Polyglyceryl-10 Nonaerucate 155808-79-0	the nonaester of erucic acid and polyglycerin-10  wherein R- represents hydrogen or the residue of erucic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 mixed multi-esters		
Polyglyceryl-10 Decamacadamiate	a decaester of polyglycerin-10 and the fatty acids derived from macadamia nut oil  wherein RC(O)- represents the residue of the fatty acids derived from macadamia nut oil, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Dicocoate	the diester of coconut acid and polyglycerin-10  wherein RC(O)- represents the residue of coconut acid, and n is 10	surfactant – cleansing agent; surfactant - emulsifying agent
Polyglyceryl-10 Didecanoate 182015-59-4	the diester of decanoic acid andppolyglycerin-10  wherein RC(O)- represents the residue of decanoic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Polyglyceryl-10 Dodeca-Caprylate/ Caprate	the dodecaester of a mixture of caprylic and capric acids with polyglycerin-10  wherein RC(O)- represents the residue of capric or caprylic acid, and n is 10	skin-conditioning agent - occlusive
Polyglyceryl-10 Hepta(Behenate/Stearate)	the heptaester of polyglycerin-10 with a mixture of behenic acid and stearic acid  wherein R- represents hydrogen or the residue of behenic acid and stearic acid, and n is 10	surfactant - emulsifying agent
Polyglyceryl-10 Mono/Dioleate	a mixture of mono- and diesters of oleic acid and polyglycerin-10  wherein R- represents hydrogen or the residue of oleic acid, and n is 10	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-10 Sesquistearate	a mixture of mono- and diesters of stearic acid and polyglycerin-10  wherein R- represents hydrogen or the residue of stearate acid, and n is 10	surfactant - emulsifying agent
Polyglyceryl-10 Tetradecanedioate	the ester of tetradecanedioic acid and polyglycerin-10  wherein R- represents hydrogen or the residue of tetradecanedioic acid, and n is 10	hair conditioning agent; skin conditioning agent - humectant
Polyglyceryl-10 Tricocoate	the triester of coconut acid and polyglycerin-10  wherein R- represents hydrogen or the residue of coconut acid, and n is 10	surfactant – cleansing agent; surfactant - emulsifying agent
Polyglyceryl-15 discrete multi-ester		
Polyglyceryl-15 Diisostearate	a diester of isostearic acid and a glycerin polymer containing 15 glycerin units  wherein RC(O)- represents the residue of isostearic acid, and n is 15	hair conditioning agent; surfactant – cleansing agent; surfactant - emulsifying agent
Polyglyceryl-20 discrete multi-esters		
Polyglyceryl-20 Hexacaprylate	the hexaester of caprylic acid and polyglycerin-20  wherein R- represents hydrogen or the residue of caprylic acid, and n is 20	surfactant – cleansing agent; surfactant - emulsifying agent; surfactant – solubilizing agent
Polyglyceryl-20 Heptacaprylate	the heptaester of caprylic acid and polyglycerin-20  wherein R- represents hydrogen or the residue of caprylic acid, and n is 20	surfactant – cleansing agent; surfactant - emulsifying agent; surfactant – solubilizing agent
Polyglyceryl-20 Octaisononanoate	the octaester of isononanoic acid and polyglycerin-20  wherein R- represents hydrogen or the residue of isononanoic acid, and n is 20	surfactant – cleansing agent; surfactant - emulsifying agent; surfactant – solubilizing agent

Table 3. Definitions, idealized structures, and function [1 (CIR Staff)]

Ingredient CAS No.	Definition & Structure	Function(s)
Polyglyceryl-20 mixed multi-esters		
Polyglyceryl-20 Docosabehenate/Isostearate	the docosaester of polyglycerin-20 with a mixture of behenic and isostearic acids  wherein RC(O)- represents the residue of behenic or isostearic acid, and n is 20	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-20 Docosabehenate/Laurate	the docosaester of polyglycerin-20 with a mixture of behenic and lauric acids  wherein RC(O)- represents the residue of behenic or lauric acid, and n is 20	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-20 Docosabehenate/Oleate	the docosaester of polyglycerin-20 with a mixture of behenic and oleic acids  wherein RC(O)- represents the residue of behenic or oleic acid, and n is 20	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-20 Heptadecabehenate/Laurate	the heptadecaester of polyglycerin-20 with a mixture of behenic and lauric acids  wherein R- represents hydrogen or the residue of behenic or lauric acid, and n is 20	skin-conditioning agent - emollient; surfactant - emulsifying agent
Polyglyceryl-20 Octadecabehenate/Laurate	the octadecaester of polyglycerin-20 and a mixture of behenic and lauric acids  wherein R- represents hydrogen or the residue of behenic or lauric acid, and n is 20	skin-conditioning agent - emollient; surfactant - emulsifying agent

Table 4. Previously Reviewed Components and Related Ingredients

Component	Conclusion	Reference
Glycerin	safe in cosmetics in the present practices of use and concentration (was used in 15,654 formulations, 10,046 of which were leave-ons; the maximum use concentrations were 79.2% in leave-on products, 99.4% in rinse-off products, and 47.9% in products diluted for the bath	115
Dipropylene Glycol	safe as used	116,117
Tripropylene Glycol	safe in the present practices of use and concentration when formulated to be non-irritating	118
Polypropylene Glycols (and PPG≥3)	safe in the present practices of use and concentration when formulated to be non-irritating	118
Monoglyceryl Monoesters	safe in the present practices of use and concentration	3
Glyceryl Alginate	safe in the present practices of use and concentration	119
Glyceryl Isostearate/Myristate Glyceryl Myristate	safe in the present practices of use and concentration	120
Citric Acid	safe in the present practices of use and concentration	121
Coconut Acid	safe for use as a cosmetic ingredient	122
Hydroxystearic Acid	safe as a cosmetic ingredient in the present practices of use	123
Isostearic Acid	safe as a cosmetic ingredient in the present practices of use	124
Lauric Acid	safe in the present practices of use and concentration	125
Myristic Acid	safe in the present practices of use and concentration	120
Oleic Acid	safe in the present practices of use and concentration	125
Olive Acid	safe in the present practices of use and concentration	126
Palm Acid	safe in the present practices of use and concentration	126
Palmitic Acid	safe in the present practices of use and concentration	125
Rice Bran Acid	safe in the present practices of use and concentration	126
Ricinoleic Acid	safe in the present practices of use and concentration	127
Sebacic Acid	safe in the present practices of use and concentration	128
Stearic Acid Potassium Stearate Sodium Stearate	safe in the present practices of use and concentration	125 129,130 129,130
Adansonia Digitata Seed Oil	safe in the present practices of use and concentration	126
Argania Spinosa Kernel Oil	safe in the present practices of use and concentration	126
Beeswax	safe in the present practices of use and concentration	131,132
Bertholletia Excelsa Seed Oil	safe in the present practices of use and concentration	126
Borago Officinalis Seed Oil	safe in the present practices of use and concentration	126
Butyrospermum Parkii (Shea) Butter	safe in the present practices of use and concentration	126
Caprylic/Capric/Coco Glycerides	safe for use as a cosmetic ingredient	122
Carthamus Tinctorius (Safflower) Seed Oil	safe in the present practices of use and concentration	126
Citrullus Lanatus (Watermelon) Seed Oil	safe in the present practices of use and concentration	126
Cocos Nucifera (Coconut) Oil Cocoglycerides Hydrogenated Coco-Glycerides	safe for use as a cosmetic ingredient	122
Corylus Avellana (Hazelnut) Seed Oil	safe in the present practices of use and concentration	126
Cucurbita Pepo (Pumpkin) Seed Oil	safe in the present practices of use and concentration	126
Elaeis Guineensis (Palm) Oil Elaeis Guineensis (Palm) Kernel Oil	safe in the present practices of use and concentration	126
Euphorbia Cerifera (Candelilla) Wax	safe in the present practices of use and concentration	131,132
Glycine Soja (Soybean) Oil Hydrogenated Soybean Oil	safe in the present practices of use and concentration	126
Helianthus Annuus (Sunflower) Seed Oil Helianthus Annuus (Sunflower) Seed Wax	safe in the present practices of use and concentration	126
Linum Usitatissimum (Linseed) Seed Oil	safe in the present practices of use and concentration	126
Macadamia Integrifolia Seed Oil Macadamia Ternifolia Seed Oil	safe in the present practices of use and concentration	126
Olea Europaea (Olive) Fruit Oil	safe in the present practices of use and concentration	126
Orbignya Oleifera Seed Oil		
Oryza Sativa (Rice) Bran Oil Oryza Sativa (Rice) Bran Wax	safe in the present practices of use and concentration	133
Persea Gratissima (Avocado) Oil	safe in the present practices of use and concentration	126
Prunus Amygdalus Dulcis (Sweet Almond) Oil	safe in the present practices of use and concentration	126
Prunus Armeniaca (Apricot) Kernel Oil	safe in the present practices of use and concentration	126
Ricinus Communis (Castor) Seed Oil	safe in the present practices of use and concentration	127

Table 4. Previously Reviewed Components and Related Ingredients

Component	Conclusion	Reference
Hydrogenated Castor Oil		
Schinziophyton Rautanenii Kernel Oil	safe in the present practices of use and concentration	126
Sclerocarya Birrea Seed Oil	safe in the present practices of use and concentration	126
Simmondsia Chinensis (Jojoba) Seed Wax	safe in the present practices of use and concentration	134
Sesamum Indicum (Sesame) Seed Oil	safe in the present practices of use and concentration	126
Theobroma Cacao (Cocoa) Seed Butter	safe in the present practices of use and concentration	126
Theobroma Grandiflorum Seed Butter	safe in the present practices of use and concentration	126

Table 7. Specifications, Impurities, and/or Constituents

Ingredient	Specifications/Impurities/Constituents	Reference
Diisostearoyl Polyglyceryl-3 Dimer Dilinoleate	PEG-free	159
Polyglyceryl-4 Caprate	PEG-free	164
Polyglyceryl-6 Distearate	100% vegetable-derived ; PEG-free	184,224
Polyglyceryl-10 Distearate	arsenic = 0.002; heavy meals = 0.005	177
Polyglyceryl-4 Laurate	PEG-free	187
Polyglyceryl-4 Oleate	100 ppm D,L-tocopherol; <1% volatiles	225
Polyglyceryl-10 Myristate	2 ppm arsenic; 20 ppm heavy metals	185

Abbreviations: PEG – polyethylene glycol

*Because each ingredient may be used in cosmetics with multiple exposure types, the sum of all exposure types may not equal the sum of total uses.

[a] Includes products that can be sprays, but it is not known whether the reported uses are sprays

[b] Not specified whether this product is a spray or a powder or neither, but it is possible it may be a spray or a powder, so this information is captured for both categories of incidental inhalation

[c] Includes products that can be powders, but it is not known whether the reported uses are powders

NR – not reported

Table 9. Supplier Recommended Use Levels

Ingredient	Supplier-Recommended Concentration	Reference
Diisostearoyl Polyglyceryl-3 Dimer Dilinoleate	3.0%	159
Polyglyceyrl-4 Caprate	2-10%	164
Polyglyceryl-3 Caprylate	0.2-2%	163
Polyglyceryl-10 Caprylate/Caprate	1-7%	166
Polyglyceryl-4 Cocoate	1-5%	226
Polyglyceryl-6 Distearate	1-3% 4-6	184 224
Polyglyceryl-10 Eicosanedioate/Tetradecanedioate	1-10%	227
Polyglyceyrl-4 Isostearate	2.5-4%	180
Polyglyceryl-4 Laurate (in o/w lotion wipes)	5.0 - 10.0 % in concentrates 0.5 - 1.0 % in impregnating liquids	187
Polyglyceryl-10 Laurate (~60% pure, with ~40% polyglycerin-10 and ~2% sodium laurate)	≤3%	20
Polyglyceryl-3 Oleate	2.5-4%	190
Polyglyceryl-10 Oleate	1-7%	193
Polyglyceryl-3 Ricinoleate	3.5-4% (w/o emulsions); 5-25% (anhydrous products)	206
Polyglyceryl-2 Sesquioleate	2-3%	207

Ingredient	Animals	No./Group	Vehicle	Concentration/Dose/Protocol	LD_{50}/Results	Reference
DERMAL						
Polyglyceryl Multi-Esters						
1,2,3-propanetriol, homo-polymer, diisooctadecanoate (n not defined; most likely Polyglyceryl-3 Diisostearate)	Wistar rats	5/sex	undiluted	5 g/kg (5.2 mL/kg bw) was applied with a semi-occlusive patch for 24 h	>5 g/kg no local effects were observed	[39]
ORAL						
polyglyceryl ester (unspecified)	rats	not provided	not specified	7, 14 and 29 g/kg bw by gavage	no signs of any toxic effect	[32]
polyglyceryl ester (unspecified)	rabbits	not provided	not specified	10-29 g/kg bw	no signs of any toxic effect	[32]
Polyglyceryl Monoesters						
Polyglyceryl-3 Caprate	rat	not provided	not specified	OECD 401 (acute oral toxicity by gavage)	LD_{50} > 2 g/kg	[40]
Polyglyceryl-3 Caprylate	rat	not provided	not specified	OECD 423 (acute oral toxicity by gavage)	LD_{50} > 2 g/kg	[41]
Polyglyceryl-3 Isostearate	rat	not provided	not specified	FHSA, 16 CFR 1500.3	LD_{50} > 5 g/kg	[42]
Polyglyceryl-3 Oleate	rat	not provided	not specified	FHSA, 16 CFR 1500.3	LD_{50} > 5 g/kg	[43]
Polyglyceryl-4 Caprate	rat	not provided	not specified	OECD 401 (acute oral toxicity by gavage)	LD_{50} > 2 g/kg	[44]
Glyceryl/Polyglyceryl-6 Isostearate/Behenate Esters	Sprague Dawley rats	3 females	arachis oil BP	2 g/kg bw by gavage (2 groups)	LD_{50} > 2.5 g/kg bw (estimated)	[45]
Polyglyceryl Multi-Esters						
Polyglyceryl-2 Diisostearate	female Wistar rats	10	water	not provided	>5 g/kg	[38]
Polyglyceryl-2 Diisostearate	rats	5/sex	not specified	not provided	>5 g/kg	[38]
Polyglyceryl-3 Diisostearate	NMRI mice	5 females	not specified	2 g/kg	>2 g/kg	[46,47]
1,2,3-propanetriol, homo-polymer, diisooctadecanoate (n not defined; most likely Polyglyceryl-3 Diisostearate)	Wistar rats	5/sex	peanut oil	single oral dose of 50% (w/v) by gavage	>5 g/kg	[39]
Diisostearoyl Polyglyceryl-3 Dimer Dilinoleate	rat	not provided	not specified	OECD 423 (acute oral toxicity by gavage)	LD_{50} > 2 g/kg bw	[48]
tetraisostearoyl polyglyceryl-3 dimer dilinoleate (as read-across for Diisostearoyl Polyglyceryl-3 Dimer Dilinoleate and Triisostearoyl Polyglyceryl-3 Dimer Dilinoleate)	rats	not provided	not provided	not provided	>5 g/kg	[49,50]
Macadamia Seed Oil Polyglyceryl-6 Esters Behenate	Sprague-Dawley rats	3 females	arachis oil	dosed with 2 g/kg by gavage (2 groups)	>2.5 g/kg bw (estimated) no mortality	[51]
Polyglyceryl-8 Decabehenate/ Caprate	Sprague-Dawley rats	1 female; 4females	arachis oil BP	dosed with 2 g/kg by gavage (2 groups)	>2.0 g/kg bw (estimated) no mortality	[52]
Polyglyceryl-8 Decaerucate/ Decaisostearate/ Decaricinoleate	Sprague-Dawley rats	3 females	none	dosed with 2 g/kg, neat, by gavage (2 groups)	>2.5 g/kg bw (estimated) no mortality	[53]
Polyglyceryl-10 Nonaisostearate	Sprague-Dawley rats	3 females	arachis oil	0.3 g/kg (30 mg/ml) in arachis oil or 2 g/kg neat by gavage	>2.5 g/kg bw (estimated) no mortality	[54]

Test Article	Concentration/Vehicle	Test System	Procedure	Results	Reference
IN VITRO					
Polyglyceryl Monoesters					
Polyglyceryl-2 Oleate	333-5000 µg/plate in DMSO	*S. typhimurium* TA1535, TA1537, TA98 and TA100; *E. coli* WP2uvrA	Ames test, with and without metabolic activation (OECD Guideline 471)	not mutagenic cytotoxic at 5000 µg/plate in strain TA1537 without activation and TA1535 with activation positive and vehicle controls gave expected results	46
Polyglyceryl-2 Oleate	10-150 µg/ml, 4-h exposure with and without activation 5-75 µg/ml, 24-h exposure without activation in DMSO	mouse lymphoma L5178Y cells	mammalian cell gene mutation assay, with and without metabolic activation (OECD test guideline 476)	not genotoxic cytotoxic without activation at ≥30 µg/ml and with activation at ≥50 µg/m positive and vehicle controls gave expected results	46
Polyglyceryl-2 Oleate	25-150 and 50-200 µg/ml, 4-h exposure without and with activation, respectively; 25-100 µg/ml, 22-h exposure without activation in DMSO	human peripheral blood lymphocytes	chromosomal aberration assay, with and without metabolic activation (OECD Guideline 473)	not genotoxic positive and vehicle controls gave expected results	46
Polyglyceryl-3 Caprate	not provided	not provided	Ames test; OECD 471	no evidence of mutagenic activity	40
Polyglyceryl-3 Caprylate	not provided	not provided	Ames test; OECD 471	no evidence of mutagenic activity	41
Polyglyceryl-3 Laurate	50-5000 µg/plate (vehicle not specified)	not provided	Ames test; details not provided	negative	56
Polyglyceryl-3 Isostearate	not provided	not provided	Ames test; details not provided	no evidence of mutagenic activity	42
Polyglyceryl-4 Caprate	not provided	not provided	Ames test; OECD 471	no evidence of mutagenic activity	44
Polyglyceryl-4 Isostearate	not provided	not provided	Ames test; details not provided	negative	43
Polyglyceryl-4 Laurate/Succinate	1.5-5000 µg/plate in distilled water	*S. typhimurium* TA1535, TA1537, TA98, TA100; *E. coli* WP2uvrA	Ames test, with and without metabolic activation	not mutagenic cytotoxicity was observed in *S. typhimurium* with several concentrations positive and vehicle controls gave expected results	57
Glyceryl/Polyglyceryl-6 Isostearate/ Behenate Esters	50-5000 µg/plate in acetone	*S. typhimurium* TA1535, TA1537, TA98, TA100*; E. coli* WP2uvrA	Ames test, assayed in triplicate, with and without metabolic activation; (2 experiments performed)	not mutagenic positive and vehicle controls gave expected results	58
Polyglceryl-6 Caprylate/Caprate	0.15-5000 µg/plate in distilled water	*S. typhimurium* TA1535, TA1537, TA98, TA100; *E. coli* WP2uvrA	Ames test, with and without metabolic activation	not mutagenic cytotoxicity was observed with several concentrations positive and vehicle controls gave expected results	59

Table 13. Genotoxicity studies

Test Article	Concentration/Vehicle	Test System	Procedure	Results	Reference
Polyglyceryl-10 Laurate (~60% pure, with ~40% polyglycerin-10 and ~2% sodium laurate)	0-125 µg/ml without activation 0-2250 µg/ml with activation	Chinese hamster V79 cells	chromosomal aberration assay; 20 h harvest time	equivocal without and positive with activation without activation, a slight increase of aberrant cells was seen with 50 and 70, but not 65, µg/ml with activation, the aberration rates with 1250 and 1500 µg/mL were significantly increased, and a dose relationship was observed	[20]
Polyglyceryl-10 Laurate (~60% pure, with ~40% polyglycerin-10 and ~2% sodium laurate)	10-1000 µg/ml, 4-h exposure without and with activation 10-500 µg/ml, 20-h exposure without activation	human peripheral lymphocytes	chromosomal aberration assay; 20 h harvest time metaphase analysis was performed with cultures exposed to 50 - 250 µg/ml for 4 h and 50 - 300 µg/ml for 20 h without metabolic activation, and to 125 -500 µg/ml with metabolic activation	not clastogenic; no significant increases in chromosomal aberrations were observed in any treatment group at any dose level	[20]
Polyglyceryl Multi-esters					
Polyglyceryl-2 Diisostearate	4-5000 µg/plate in acetone	*S. typhimurium* TA1535, TA1537, TA98, TA100	Ames test, with and without metabolic activation	not mutagenic	[38]
Polyglyceryl-2 Diisostearate	3.16 - 5000 µg/ml, 4-h exposure without and with activation 10-5000 µg/ml, 20-h exposure without activation cell culture medium (MEM) served as the vehicle	Chinese hamster lung fibroblasts V79 cells	mammalian cell gene mutation assay, with and without metabolic activation; 20 h harvest time chromosomal aberrations were evaluated in cultures exposed to 1000-5000 µg/ml for 4 h and 50 - 5000 µg/ml for 20 h without metabolic activation, and to 100 -5000 µg/ml with metabolic activation	no evidence of a concentration-related positive response	[38]
Polyglyceryl-2 Diisostearate	3.16-5000µg/ml in cell culture medium (MEM)	Chinese hamster lung fibroblasts V79 cells	chromosomal aberration assay, with and without metabolic activation	not clastogenic	[38]
1,2,3-propanetriol, homopolymer, di-isooctadecanoate (n not defined; most likely Polyglyceryl-3 Diisostearate)	8-5000 µg/plate in Tween 80/bidistilled water	*S. typhimurium* TA1535, TA1537, TA1538, TA98 and TA100	Ames test, with and without metabolic activation	not mutagenic positive and vehicle controls gave expected results	[39]
1,2,3-propanetriol, homopolymer, di-isooctadecanoate (n not defined; most likely Polyglyceryl-3 Diisostearate)	3.13 - 200 µg/ml, 4-h exposure without activation 3.13 - 150 µg/ml, 4-h exposure with activation in DMSO	CHO cells	mammalian cell gene mutation assay, with and without metabolic activation; 4-h exposure	not genotoxic positive and negative controls gave expected results	[39]
1,2,3-propanetriol, homopolymer, di-isooctadecanoate (n not defined; most likely Polyglyceryl-3 Diisostearate)	12.5-800µg/ml without and 3.13-800µg/ml with activation, in DMSO	Chinese hamster lung fibroblasts V79 cells	chromosomal aberration assay, with and without metabolic activation; 4 and 18-h exposure	not clastogenic	[39]
Diisostearoyl Polyglyceryl-3 Dimer Dilinoleate	not provided	not provided	Ames test; OECD 471	negative	[48]
Macadamia See Oil Polyglyceryl-6 Esters Behenate	50-5000 µg/plate in acetone	*S. typhimurium* TA1535, TA1537, TA98, TA100*; E. coli* WP2uvrA	Ames test, assayed in triplicate, with and without metabolic activation; (2 experiments performed)	not mutagenic positive and vehicle controls gave expected results	[60]
Polyglyceryl-8 Decabehenate/Caprate	50-5000 µg/plate in tetrahydrofuran	*S. typhimurium* TA1535, TA1537, TA98, TA100*; E. coli* WP2uvrA	Ames test, assayed in triplicate, with and without metabolic activation; (2 experiments performed)	not mutagenic positive and vehicle controls gave expected results	[61]
Polyglyceryl-8 Decaerucate/Decaisostearate/Decaricinoleate	50-5000 µg/plate in tetrahydrofuran	*S. typhimurium* TA1535, TA1537, TA98, TA100*; E. coli* WP2uvrA	Ames test, assayed in triplicate, with and without metabolic activation; (2 experiments performed)	not mutagenic positive and vehicle controls gave expected results	[62]

Table 13. Genotoxicity studies

Test Article	Concentration/Vehicle	Test System	Procedure	Results	Reference
Polyglyceryl-10 Decaethylhexanoate	range-finding test: 10-5000 µg/ plate; main experiments: 5-5000 µg/plate; in DMF	*S. typhimurium* TA1535, TA1537, TA98, TA100*; E. coli* WP2uvrA	Ames test, with and without metabolic activation	not mutagenic positive and vehicle controls gave expected results	63
Polyglyceryl-10 Pentaisostearate	range-finding test: 10-5000 µg/ plate; main experiments: 5-5000 µg/plate; in acetone	*S. typhimurium* TA1535, TA1537, TA98, TA100*; E. coli* WP2uvrA	Ames test, with and without metabolic activation	not mutagenic positive and vehicle controls gave expected results	64
Polyglyceryl-10 Nonaisostearate	50-5000 µg/plate in tetrahydrofuran	*S. typhimurium* TA1535, TA1537, TA98, TA100*; E. coli* WP2uvrA	Ames test, assayed in triplicate, with and without metabolic activation; (2 experiments performed)	not mutagenic positive and vehicle controls gave expected results	65

Abbreviations: CHO – Chinese hamster ovary; DMF – *N,N*-dimethylformamide; DMSO – dimethyl sulfoxide; MEM – minimum essential medium; OECD – Organisation for Economic Co-operation and Development

ALTERNATIVE STUDIES					
Polyglyceryl Monoesters					
Apricot Kernel Oil Polyglyceryl-4 Esters	16 ± 0.5 µl	reconstituted human epidermis	SkinEthic™ irritation test; test material was applied for 42 min; cell viability assessment by MTT method after 42 h	classified as non-irritant	47
Palm Oil Polyglyceryl-4 Esters	16 ± 0.5 µl	reconstituted human epidermis	SkinEthic™ irritation test; protocol as described previously	classified as non-irritant	47
Polyglyceryl-4 Laurate/Sebacate	neat	reconstituted human epidermis	EpiSkin™ model; 15 min treatment period with a 42 h post-exposure incubation period; cell viability was measured by MTT reduction	considered to be non-irritant relative mean viability was 105.4%	66
Polyglyceryl-4 Laurate/Succinate	neat	reconstituted human epidermis	EpiSkin™ model; protocol as described previously	considered to be non-irritant relative mean viability was 104.1%	67
Polyglyceryl-6 Caprylate/Caprate	neat	reconstituted human epidermis	EpiSkin™ model; protocol as described previously	considered to be non-irritant relative mean viability was 105.7%	68
Polyglyceryl-10 Decaethyl-hexanoate	neat; 30 µl	reconstituted human epidermis (surface: 0.63 cm^2); 3 tissues	EpiDerm™ model performed according to Method B.46; 60 min exposure time, followed by a 42-h incubation period; cell viability was measured in an MTT assay	considered to be non-irritating avg. viability was 101.4% of negative control avg. value	69
Polyglyceryl-10 Pentaisostearate	neat; 30 µl	reconstituted human epidermis (surface: 0.63 cm^2); 3 tissues	EpiDerm™ model; protocol as described previously	considered to be non-irritating avg. viability was 94.7% of negative control avg. value	70
ANIMAL					
Polyglyceryl Monoesters					
Polyglyceryl-2 Isostearate	undiluted; 0.5 ml	3 NZW rabbits	4-h, 2 x 3 cm semi-occlusive patch applied to clipped skin	PII of 0.8 (mildly irritating); very slight erythema was observed in all 3 animals and resolved in 2-7 days	83
Polyglyceryl-3 Caprate	not provided	rabbit	OECD TG 404 (acute dermal irritation/corrosion)	not irritating	40
Polyglyceryl-3 Caprate	not provided	guinea pig	OECD TG 406 (sensitization)	no skin sensitization effect	40

Table 14. Dermal irritation and sensitization

Test Article	Concentration/Dose	test system/# per Group	Procedure	Results	Reference
a polyglyceryl mono/diester of capric acid (C10) (provided as read-across for Polyglyceryl-3 Caprylate)	not provided	rabbit	OECD TG 404 (acute dermal irritation/corrosion)	not irritating	41
Polyglyceryl-3 Caprylate	not provided	mouse	OECD TG 429; LLNA	not sensitizing	41
Polyglyceryl-3 Isostearate	not provided	rabbit	FHSA, 16 CFR 1500.41	moderately irritating	42
Polyglyceryl-3 Isostearate	not provided	guinea pig	OECD TG 406 (sensitization)	no skin sensitization effect	42
Polyglyceryl-3 Oleate	not provided	rabbit	FHSA, 16 CFR 1500.41	moderately irritating	43
Polyglyceryl-4 Caprate	not provided	rabbit	OECD TG 404 (acute dermal irritation/corrosion)	not irritating	44
Polyglyceryl-4 Caprate	not provided	guinea pig	OECD TG 406 (sensitization)	no skin sensitization effect	44
Polyglyceryl-4 Isostearate	not provided	guinea pig	OECD TG 406 (sensitization)	no sensitizing effect	43
Glyceryl/Polyglyceryl-6 Isostearate/Behenate Esters	applied neat; 0.5 ml	1 NZW rabbit	single 3 min, 1 h, and 4 h semi-occlusive application using a 2.5 cm^2 patch	no irritation observed after 3 min or 1 h (4 results included below)	72
		2 NZW rabbits	single 4-h semi-occluded patch to clipped skin on the dorsal/flank are	PII of 0.3 (mild irritant); very slight erythema in 2 animals at 24 h was resolved by 48-h	
Glyceryl/Polyglyceryl-6 Isostearate/Behenate Esters	12.5, 25, 50% in liquid paraffin; undiluted	2 or 3 female albino guinea pigs	preliminary sighting tests for sensitization study; 24 h occlusive patch; determination of concentration for topical induction (2 animals) and topical challenge (3 animals)	no skin reactions were observed in either group	73
Glyceryl/Polyglyceryl-6 Isostearate/Behenate Esters	intradermal induction: 25% in olive oil topical induction: 100% topical challenge: 100%; 50% in liquid paraffin	female albino guinea pigs; 10 test and 5 control animals	GPMT intradermal induction: 3 pairs of injections on day 1: 1.) FCA + isotonic sodium chloride (1:1) 2.) test article 3.) test article + FCA/ isotonic sodium chloride topical induction: 48-h occlusive patch on day 7 challenge: 24-h occlusive patches (study day not specified)	not sensitizing; no reactions were observed	73
Polyglyceryl Multi-Esters					
Polyglyceryl-2 Diisostearate	undiluted; 0.5 ml	3 NZW rabbits	4-h, 2.5 cm^2 semi-occlusive patch	non-irritating; 1 animal had well-defined erythema 24 h after patch removal	38
Polyglyceryl-2 Diisostearate	1 and 10% in saline, and undiluted; 0.5 ml	2 Albino-Himalayan-Kaninchen rabbits/gp	24-h, 2.5 cm^2 occlusive patch on intact and abraded skin	slightly irritating; with undiluted test substance, distinct erythema and slight to distinct edema was observed in both animals; with 10%, marked erythema was observed in 1 animal for a short time; with 1%, slight erythema in 1 animal	38
Polyglyceryl-2 Diisostearate	induction: 100% challenge: 20% in acetone	20 female Pirbright-White guinea pigs/gp	Buehler test using occlusive patches; 10 control animals were exposed to an ethanol-water (80:20) mixture	non-sensitizing	38
Polyglyceryl-3 Diisostearate	not specified	3 NZW rabbits	method was described as OECD Guideline 404, but study details were not provided; test sites were scored according to Draize	not irritating; slight erythema was seen on skin of all 3 animals tested starting 1 hour following application, and this effect was fully reversible within by 72 h	46,47
Polyglyceryl-3 Diisostearate	5-50% in paraffin perliquid DAB 8	3 Pirbright-White guinea pigs	in a range-finding study for a sensitization test, the test material was applied to the shaved flank for 6 h	not irritating after 24 h	46

Table 14. Dermal irritation and sensitization

Test Article	Concentration/Dose	test system/# per Group	Procedure	Results	Reference
1,2,3-propanetriol, homopolymer, diisooctadecanoate (n not defined; most likely Polyglyceryl-3 Diisostearate)	undiluted; 0.5 ml	4 male rabbits	4-h occlusive patch to a shaved 6.25 cm² area	not irritating; very slight to slight erythema in 3/4 animals at 24 and 48 h; slight and moderate erythema in 2/4 animals at 72 h; the effects were reversible in all animals within 7 d	[39]
Polyglyceryl-3 Diisostearate	induction: 50% in paraffin perliquid DAB 8 (induction 1) or in pet-rolatum (inductions 2 and 3) challenge: 50% paraffin perliquid DAB 8 rechallenge: 25%	20 (test) or 19 (control) female Pirbright-White guinea pigs	test sites were pre-treated with 10% SDS in petrolatum, 24 h prior to each induction application epicutaneous induction: 6-h occlusive patches (0.2 ml) applied 1x/wk for 3 wks; half of the controls were pretreated with SDS 24 h prior to application of patches containing vehicle challenge: 6-h occlusive patch (0.1 ml) applied on day 28 rechallenge: 6-h occlusive patch (0.1 ml) applied on day 35	non-sensitizing very slight skin reactions (erythema and edema) were seen at 24-h following the challenge and rechallenge patches in test and control animals; these reactions were reversible in all animals within 48 h and were attributed to irritation	[46]
Polyglyceryl-3 Diisostearate	intradermal induction: 0.1% or 0.2% topical induction: 40% challenge: 10 and 15% rechallenge: 8 and 4% vehicle was paraffinum perliquidum DAB 8 for all phases	20 (test) or 19 (control) female Pirbright-White guinea pigs	GPMT, no positive control intradermal induction: 3 pairs of injections on day 1: 1.) FCA + physiological saline in water (1:1) 2.) 0.1% test article 3.) 0.2% test article + FCA/ physiological saline in water (1:1) topical induction: 48-h occlusive patch on day 8 (0.1 ml) challenge: 24-h occlusive patches on day 22 (0.1 ml) rechallenge: 24 h occlusive patches on day 29 (0.1 ml)	results were inconclusive intradermal induction: 0.1 ml FCA (50% (v/v)), the test substance (0.1% (v/v)) and a 1:1 mixture of the test substance with FCA caused moderate to severe skin reactions; in the control group, 0.1 ml of the vehicle resulted in moderate skin reactions epicutaneous induction: after treatment with 40% of the test substance, the injection sites of the intradermal induction were bloody and purulent and at a later stage, this sites showed necrotic and scabby skin lesions challenge with 15%: at 24 h, erythema (1) was observed in 9 test and 2 control animals; edema (2) in 1 test animal, and edema (1) in 2 test and 2 control animals; at 48 h, erythema (2) in 1 test animal (that was 0 at 24 h), erythema (1) in 7 test animals, same edema scores as at 24 h for test animals, no edema in controls challenge with 10%: at 24 h, erythema (3) in 1 and erythema (1) in 5 test animals, edema (3) in 1 and edema (2) in 1 test animal; at 48 h, erythema (3) and edema (3) in 1 animal and erythema (1) and edema (1) in 1 test animal; no erythema or edema in controls at 24 or 48 h rechallenge with 8%: at 24 h, erythema (1) in 6 test and 4 control animals, no edema in test or controls; at 48-h, erythema (1) in 3 test and 1 control animals, no edema in test or controls rechallenge with 4%: no erythema or edema	[46]
Polyglyceryl-4 Diisostearate/ Polyhydroxystearate/Sebacate (provided as read-across for Diisostearoyl Polyglyceryl-3 Dimer Dilinoleate due to similar MW and chemical characteriza-tion)	not provided	guinea pig	OECD 406 (sensitization)	not sensitizing	[48]

Table 14. Dermal irritation and sensitization

Test Article	Concentration/Dose	test system/# per Group	Procedure	Results	Reference
Macadamia Seed Oil Poly-glyceryl-6 Esters Behenate	applied neat; 0.5 ml	1 NZW rabbit	single 3 min, 1 h, and 4 h semi-occlusive application using a 2.5 cm^2 patch	no irritation observed after 3 min or 1 h (4 results included below)	[74]
		2 NZW rabbits	single 4-h semi-occluded patch to clipped skin on the dorsal/flank area	PII of 0.0 (non-irritant; very slight erythema was observed at two sites 1 h after patch removal	
Macadamia Seed Oil Poly-glyceryl-6 Esters Behenate	12.5, 25, 50% in liquid paraffin; undiluted	2 or 3 female albino guinea pigs	preliminary sighting tests for sensitization study; 24 h occlusive patch; determination of concentration for topical induction (2 animals) and topical challenge (3 animals)	no skin reactions were observed in either group	[75]
Macadamia Seed Oil Poly-glyceryl-6 Esters Behenate	intradermal induction: 25% in olive oil topical induction: 100% topical challenge: 100%; 50% in liquid paraffin	female albino Dunkin Hartley guinea pigs; 10 test and 5 control animals	GPMT intradermal induction: 3 pairs of injections on day 1: 1.) FCA + isotonic sodium chloride (1:1) 2.) test article 3.) test article + FCA/ isotonic sodium chloride topical induction: 48-h occlusive patch on day 7 challenge: 24-h occlusive patches (study day not specified)	not sensitizing; no reactions were observed	[75]
Polyglyceryl-8 Decabehenate/Caprate	applied neat; 0.5 g moistened with 0.5 ml distilled water	1 NZW rabbit	single 3 min, 1 h, and 4 h semi-occlusive application using a 2.5 cm^2 patch	no irritation observed after 3 min or 1 h (4 results included below)	[76]
		2 NZW rabbits	single 4-h semi-occluded patch to clipped skin on the dorsal/flank area	PII of 0.0 (non-irritant; very slight erythema was observed at two sites 1 h after patch removal	
Polyglyceryl-8 Decabehenate/Caprate	7.5, 15, 30, and 60% in liquid paraffin	2 or 3 female albino guinea pigs	preliminary sighting tests for sensitization study; 24 h occlusive patch; determination of concentration for topical induction (2 animals) and topical challenge (3 animals)	no skin reactions were observed in either group	[77]
Polyglyceryl-8 Decabehenate/Caprate	intradermal induction: 5% in olive oil topical induction: 60% in liquid paraffin topical challenge: 30 and 60% in liquid paraffin	female albino Dunkin Hartley guinea pigs; 10 test and 5 control animals	GPMT intradermal induction: 3 pairs of injections on day 1: 1.) FCA + isotonic sodium chloride (1:1) 2.) test article 3.) test article + FCA/ isotonic sodium chloride topical induction: 10% SLS in vaseline was applied on day 6; 48-h occlusive patch on day 7 challenge: 24-h occlusive patches (study day not specified)	not sensitizing; no reactions were observed	[77]
Polyglyceryl-8 Decaerucate/ Decaisostearate/Decaricinoleate	applied neat; 0.5 ml	3 NZW rabbits	single 4 h semi-occlusive application to clipped skin on the dorsal/flank area using a 2.5 cm^2 patch	PII of 0.0 (non-irritant)	[78]
Polyglyceryl-8 Decaerucate/ Decaisostearate/Decaricinoleate	undiluted and 25, 50, and 75% in arachis oil BP	2 male albino guinea pigs	preliminary sighting tests for sensitization study; animals were injected with FCA, and after 145 days, a 48 h occlusive patch was applied	1 h after patch removal, both animals had erythema scores of 2 (moderate and confluent erythema) at concentrations 50-100%, one animal had an erythema score of 2 and one had a score of 1 discrete or patchy erythema) with 25%; all reactions resolved by 24 h	[79]
Polyglyceryl-8 Decaerucate/ Decaisostearate/Decaricinoleate	undiluted and 25, 50, and 75% in arachis oil BP	2 male albino guinea pigs	preliminary sighting tests for dermal induction in the sensitization study; 24 h occlusive patch; animals were not part of the main study, but were treated identically to controls up to day 14	1 h after patch removal, 1 animal had a score of 2 for erythema with 100% test article; all other erythema scores were 1 at 1 ; all reactions resolved by 24 h	[79]

Table 14. Dermal irritation and sensitization

Test Article	Concentration/Dose	test system/# per Group	Procedure	Results	Reference
Polyglyceryl-8 Decaerucate/ Decaisostearate/Decaricinoleate	intradermal induction: 5% in arachis oil BP topical induction: 100% topical challenge: 100%; 75% arachis oil BP	male albino Dunkin Hartley guinea pigs; 10 test and 5 control animals	GPMT; intradermal induction: 3 pairs of injections on day 1: 1.) FCA + distilled water (1:1) 2.) test article 3.) test article + FCA/distilled water topical induction: 48-h occlusive patch (40 mm x 20 mm patch) on day 7 challenge: 24-h occlusive patch (20 mm x 20 mm) on day 21	not sensitizing at 24 h after intradermal induction, all test and control animals had an erythema score of 1 or 2, which was resolved in almost all control animals, but not test animals at 48 h; 1 h after topical induction, there was bleeding from the intradermal injection sites of 8/10 test animals, and at 24 h, 2 animals had an erythema score of 2	79
Polyglyceryl-10 Nonaisostearate	undiluted; 0.5 ml	3 rabbits	24-h closed patch to intact and abraded skin	very slightly irritation; PII = 1.08 PII of untreated patch was 0.42) intact skin: very slight erythema was observed in all 3 animals at 24 h and in 2 animals at 72 h abraded skin: very slight to slight erythema was observed in all 3 animals at 24 h, and slight erythema was still observed at 72 h	81
Polyglyceryl-10 Nonaisostearate	100%; 50 µl	Dunkin Hartley albino guinea pigs, 4/sex	the test material was applied daily for 14 days to a 2 cm x 2 cm area of the right flank; paraffin oil was applied to the left flank and served as the control	practically non-irritant; the wk 1 and maximum WII was 0.06; the week 2 WII was 0 slight erythema was observed in 3 test animals on day 2	228
Polyglyceryl-10 Nonaisostearate	undiluted and 0, 25, and 50% v/v in acetone/ olive oil (4:1); 25 µl/ear	4 CBA/Ca mice	LLNA; the test material was applied to the dorsal surface of each ear for 3 consecutive days; all mice were injected with ^{3}HTdR on day 6	non-sensitizer; stimulation index of 0.68, 0.70, and 0.87 with 25, 50, and 100%	80
HUMAN					
Polyglyceryl Monoesters					
Polyglyceryl-2 Isostearate	7% in ESTOL 1512 (i.e., isopropyl myristate); 0.4 ml	30 subjects	three 24-h occlusive patches, with 24 to 48-h between applications	elicited slight irritation; significantly less irritating than the positive control (0.3% sodium lauryl sulfate) and significantly more irritating than the negative control (deionized water) (p=0.05)	83
Polyglyceryl-3 Laurate	100%; 150 µl/patch	114 subjects	HRIPT	not an irritant or a sensitizer	56
Glyceryl/Polyglyceryl-6 Isostearate/Behenate Esters	100%; 0.01 g	45 subjects	24-h occlusive patch test using Finn chambers applied to the upper arm; petrolatum and 0.5% "soap" were used as controls	no reactions 1 or 24 h after patch removal	84
Polyglyceryl-10 Laurate	5% in purified water; 0.03 g	35 subjects	24-h occlusive patch applied to the upper arm	not irritating; no responses were observed 1 or 24 h after patch removal	85
Polyglyceryl-10 Myristate	5% in purified water; 0.03 g	35 subjects	24-h occlusive patch applied to the upper arm	not irritating; no responses were observed 1 or 24 h after patch removal	85
Polyglyceryl-10 Myristate	10%	48 subjects	48-h occlusive patch test	negative	86
Polyglyceryl-10 Isostearate	5% in purified water; 0.03 g	35 subjects	24-h occlusive patch applied to the upper arm	not irritating; no responses were observed 1 or 24 h after patch removal	85
Polyglyceryl-10 Oleate	5% in purified water; 0.03 g	35 subjects	24-h occlusive patch applied to the upper arm	not irritating; no responses were observed 1 or 24 h after patch removal	85
Polyglyceryl-10 Stearate	10%	48 subjects	48-h occlusive patch test	non-irritating	87
60% Polyglyceryl-10 Eicosanedioate/ Tetradecanedioate/40% glycerin mixture	undiluted	45 subjects	closed patch test; details not provided	negative	88

Table 14. Dermal irritation and sensitization

Test Article	Concentration/Dose	test system/# per Group	Procedure	Results	Reference
Polyglyceryl Multi-Esters					
Polyglyceryl-2 Sesquiisostearate	undiluted	50 subjects	24-h semi-occlusive patches	not irritating	[38]
1,2,3-propanetriol, homopolymer, diisooctadecanoate (n not defined; likely Polyglyceryl-3 Diisostearate)	20% "active substance" in "cosmetic alcohol"; 70 µl	20 subjects	24-h occlusive patches	not irritating slight erythema in 3 and slight scaling in 2 subjects	[39]
Diisostearoyl Polyglyceryl-3 Dimer Dilinoleate	not provided	no provided	occlusive patch test; details not provided	"no concern"	[48]
Triisostearoyl Polyglyceryl-3 Dimer Dilinoleate	100%; 150 µl/patch	103 subjects	HRIPT	not an irritant or a sensitizer	[56]
Macadamia Seed Oil Polyglyceryl-6 Esters Behenate	100%; 0.01 g	45 subjects	24-h occlusive patch test using Finn chambers applied to the upper arm; petrolatum and 0.5% "soap" were used as controls	no reactions 1 or 24 h after patch removal	[89]
Polyglyceryl-8 Decabehenate/ Caprate	100%; 0.01 g	43 subjects	24-h occlusive patch test using Finn chambers applied to the upper arm; petrolatum and 0.5% "soap" were used as controls	no reactions 1 or 24 h after patch removal	[90]
Polyglyceryl-10 Decaethylhexanoate	100%	43 subjects	24-h occlusive patch test using Finn chambers applied to the upper arm; purified water served as the control	at 1 h after patch removal, erythema with swelling or with papule was observed at the test and control site of 1 subject, and the test site had well-defined erythema at 24 h after patch removal; well-defined erythema was observed in 3 subjects; 3 controls also had well-defined erythema	[91]
Polyglyceryl-10 Decaethylhexanoate	100%; 25 µl	50 subjects	induction: 48-h occlusive patches applied using 8 mm Finn chambers 3x/wk for 3 wks challenge: 48-h occlusive patch was applied following a 2-wk non-treatment period	non-irritating and non-sensitizing	[92]
Polyglyceryl-10 Diisostearate	5% in purified water; 0.03 g	35 subjects	24-h occlusive patch applied to the upper arm	not irritating; no responses were observed 1 or 24 h after patch removal	[85]
Polyglyceryl-10 Pentaisostearate	50%	44 Japanese subjects	24-h occlusive patch	negative	[96]
Polyglyceryl-10 Pentaisostearate	100%	43 subjects	24-h occlusive patch test using Finn chambers applied to the upper arm; purified water served as the control	1 subject exhibited well-defined erythema at 1h after patch removal (this subject had erythema with swelling at the control site)	[93]
Polyglyceryl-10 Pentaisostearate	100%; 25 µl	51 subjects	induction: 48-h occlusive patches applied using 8 mm Finn chambers 3x/wk for 3 wks challenge: 48-h occlusive patch was applied following a 2-wk non-treatment period	non-irritating and non-sensitizing	[94]
Polyglyceryl-10 Nonaisostearate	0.01 g	35 subjects	24-h occlusive application to the upper arm using a Finn chamber	negative; no responses were observed 1 or 24 h after patch removal	[95]
Polyglyceryl-10 Decaoleate	neat	44 Japanese subjects	24-h occlusive patch	negative	[97]

ALTERNATIVE STUDIES					
Polyglyceryl Monoesters					
Polyglyceryl-3 Laurate	10% in corn oil	---	EpiOcular™ tissue model	classified as non-irritating ET_{50} was >256 min	99
ME containing 30% Polyglyceryl-4 Laurate	100 µl	6 replicates	HET-CAM assay; the test article also contained 1 or 2% linoleic acid, 4 or 5% isopropyl palmitate, and 65% water-1,2-pentanediol (1:9) or 63 or 65% water-1,2-pentanediol (1.5:8.5)	non-irritant	30
ME containing 40% Polyglyceryl-4 Laurate	100 µl	6 replicates	HET-CAM; this test article also contained 2% linoleic acid, 5% isopropyl palmitate, 53% water-1,2-pentanediol (1:9)	non-irritant	30
Apricot Kernel Oil Polyglyceryl-4 Esters	0.3 g	# of replicates not stated	HET-CAM; CAM was rinsed with 5 ml physiological saline after 240 s of contact	practically non-irritating	47
Palm Oil Polyglyceryl-4 Esters	0.3 g	# of replicates not stated	HET-CAM; CAM was rinsed with 5 ml physiological saline after 240 s of contact	practically non-irritating	47
Polyglyceryl-4 Laurate/Sebacate	30 µl	human corneal epithelial cells	SkinEthic™ reconstituted HCE model; protocol as described previously	considered to be non-irritant relative mean viability was 85.9%	100
Polyglyceryl-4 Laurate/Succinate	30 µl	human corneal epithelial cells	SkinEthic™ reconstituted HCE model; protocol as described previously	considered to be non-irritant relative mean viability was 70.0%	101
Polyglyceryl-6 Caprylate/Caprate	30 µl	human corneal epithelial cells	SkinEthic™ reconstituted HCE model; protocol as described previously	considered to be non-irritant relative mean viability was 88.4%	229
Polyglyceryl-10 Laurate	0.1 ml	3 rabbit enucleated eyes	REET; test material was applied onto the cornea 0.9% saline was applied to 2 controls	considered unlikely to cause severe ocular irritation *in vivo*	103
Polyglyceryl-10 Myristate	1000 mg/l (max)	rabbit corneal epithelial cells	SIRC-NR	non-irritant	86
Polyglceryl-10 Myristate	0.1 ml	3 rabbit enucleated eyes	REET; test material was applied onto the cornea 0.9% saline was applied to 2 controls	considered unlikely to cause severe ocular irritation *in vivo*	104
Polyglyceryl-10 Isostearate	0.1 ml	3 rabbit enucleated eyes	REET; test material was applied onto the cornea 0.9% saline was applied to 2 controls	considered unlikely to cause severe ocular irritation *in vivo*	114
Polyglyceryl-10 Stearate	1000 mg/l (max)	rabbit corneal epithelial cells	SIRC-NR	non-irritant	87
60% Polyglyceryl-10 Eicosanedioate/ Tetradecanedioate/40% glycerin mixture	undiluted	---	EpiOcular™ test	non-irritant	88
Polyglyceryl Multi-Esters					
Polyglyceryl-2 Dioleate	undiluted; 300 µl	6 eggs	HET-CAM assay	classified as non-irritating Q-score <1.2 (up to 300 s)	46
Diisostearoyl Polyglyceryl-3 Dimer Dilinoleate	not stated	not stated	HET-CAM assay	minor irritation	48
Triisostearoyl Polyglyceryl-3 Dimer Dilinoleate	10% in corn oil	-----	EpiOcular™ tissue model	classified as non-irritating ET_{50} was >256 min	49
Polyglyceryl-10 Decaethylhexanoate	undiluted; 100 µl	human-derived epi-dermal keratinocytes	EpiOcular™ tissue model distilled water served as a negative control	classified as non-irritating ET_{50} was >256 min	105
Polyglyceryl-10 Diisostearate	1000 mg/l (max)	rabbit corneal epithelial cells	SIRC-NR	non-irritant	106
Polyglyceryl-10 Pentaisostearate	undiluted; 100 µl	human-derived epi-dermal keratinocytes	EpiOcular™ tissue model distilled water served as a negative control	classified as non-irritating ET_{50} was >256 min	107

ANIMAL					
Polyglyceryl Monoesters					
Polyglyceryl-3 Caprate	not provided	rabbits; # not stated	OECD 405 (acute eye irritation/corrosion)	not irritating	[40]
a polyglyceryl mono/diester of capric acid (C10) (provided as read-across for Polyglyceryl-3 Caprylate)	not provided	rabbits; # not stated	OECD 405 (acute eye irritation/corrosion)	not irritating	[41]
Polyglyceryl-3 Isostearate	not provided	rabbits;# not stated	FHSA/CPSC 16 CFR 1500.42	mildly irritating	[42]
Polyglyceryl-3 Oleate	not provided	rabbits;# not stated	FHSA/CPSC 16 CFR 1500.42	mildly irritating	[43]
Polyglyceryl-4 Caprate	not provided	rabbits; # not stated	OECD 405 (acute eye irritation/corrosion)	not irritating	[44]
Glyceryl/Polyglyceryl-6 Isostearate/Behenate Esters	undiluted; 0.1 ml	3 NZW rabbits	single instillation into the conjunctival sac of the right eye, and the eyes were not rinsed; the contralateral eye served as a control	minimal irritant; maximum group mean score of 2.7 minimal conjunctival irritation was observed in all treated eyes 1 h after instillation; 2 eyes were normal after 24 h, and all 3 were normal at 48 h	[108]
Polyglyceryl-10 Laurate	undiluted; 0.1ml	3 NZW rabbits	in accordance with OECD 405 test guideline eyes were not rinsed	minimal irritant; maximum group mean score of 10.7/110 (at 1 h); moderate conjunctival irritation observed after 1 h and minimal conjunctival irritation at 24 h was completely reversible by 48 h	[103]
Polyglyceryl-10 Myristate	undiluted; 0.1ml	3 NZW rabbits	in accordance with OECD 405 test guideline eyes were not rinsed	minimal irritant; maximum group mean score of 10.0/110 (at 1 h); moderate conjunctival irritation observed after 1 h and minimal conjunctival irritation at 24 h was completely reversible by 48 h	[104]
Polyglyceryl-10 Isostearate	undiluted; 0.1ml	3 NZW rabbits	OECD 405 test guideline eyes were not rinsed	minimal irritant; maximum group mean score of 8.0/110 (at 1 h); moderate conjunctival irritation observed after 1 h was completely reversible by 48 h	[114]
Polyglyceryl Multi-Esters					
Polyglyceryl-2 Diisostearate	undiluted, 0.1 ml	3 NZW rabbits	in accordance with OECD test guideline 405 eyes were rinsed after 24 h and at all exams	not irritating; some observations were made at 24 h, but were fully reversible at 48 h	[38]
Polyglyceryl-2 Diisostearate	undiluted, 0.1 ml	6 NZW rabbits	rinsing not specified	not a primary eye irritant; at 24 h, 4 animals had injected vessels and 1 had swelling; at 48 h, 2 animals had ery-thema and 2 had swelling; no effects were seen at 72 h	[38]
Polyglyceryl-2 Diisostearate	0.1 and 10% in saline and undiluted; 0.1 ml	2 Albino-Himalayan-Kaninchen rabbits/gp	eyes were rinsed after 24 h	some ocular effects, including reddening were observed at all concentrations tested, but the results were not quantified	[38]
Polyglyceryl-2 Dioleate	undiluted	3 rabbits	rinsing not specified	not irritating; no signs of irritation were observed	[46]
Polyglyceryl-3 Diisostearate	not stated; assumed to be undiluted	3 New Zealand albino rabbits	in accordance with OECD test guideline 405	non-irritating; at 1 h in animals, chemosis (score of 1) and redness (score of 2) were reported; at 72 h, chemosis was completely resolved and the redness score was 1	[47]
1,2,3-propanetriol, homopoly-mer, diisooctadecanoate (n not defined most likely Polyglyceryl-3 Diisostearate)	undiluted; 0.1 ml	4 male Kleinrusse rabbits	eyes were not rinsed	not irritating; at 24 h, very slight redness of the conjunctivae was observed in 1 animal, and the effect was reversible within 48 h	[39]
Macadamia Seed Oil Polyglyceryl-6 Esters Behenate	undiluted; 0.1 ml	3 NZW rabbits	single instillation into the conjunctival sac of the right eye, and the eyes were not rinsed; the contra-lateral eye served as a control	minimal irritant; maximum group mean score of 3.3 minimal conjunctival irritation was observed in all treated eyes 1 h after instillation; all eyes were normal after 24 h	[109]

Table 15. Ocular irritation studies

Test Article	Concentration/Dose	#/Animals/Grp	Method	Results	Reference
Polyglyceryl-8 Decabehenate/ Caprate	undiluted; 0.1 ml	3 NZW rabbits	single instillation into the conjunctival sac of the right eye, and the eyes were not rinsed; the contra-lateral eye served as a control	minimal irritant; maximum group mean score of 13.0 moderate conjunctival irritation was observed in all treated eyes at 1 h and minimal conjunctival irritation in all treated eyes at 24 h after instillation; all eyes were normal after 48 h	[110]
Polyglyceryl-8 Decaerucate/ Decaisostearate/Decaricinoleate	undiluted; 0.1 ml	3 NZW rabbits	single instillation into the conjunctival sac of the right eye, and the eyes were not rinsed; the contra-lateral eye served as a control	mild irritant; maximum group mean score of 10.0 moderate conjunctival irritation was observed in all treated eyes 1 h after instillation; minimal conjunctival irritation was observed in all treated eyes at 24 h and in 1 eye at 48 h after instillation	[111]
Polyglyceryl-10 Nonaisostearate	undiluted; 0.1 ml	3 NZW rabbits	in accordance with OECD 405 test guideline eyes were not rinsed	mild irritant; maximum group mean score of 6.7/110 (at 1 h); minimal to moderate conjunctival irritation was completely reversible by 48 h (2 animals) to 72 h	[112]
HUMAN					
Polyglyceryl Monoesters					
Polyglyceryl-10 Laurate (~60% pure, with ~40% polyglycerin-10 and ~2% sodium laurate)	not provided	not provided	not provided	possibly slightly irritating to the eyes	[20]

Abbreviations: HCE – human corneal epithelium; HET-CAM - Hen's Egg Test – Chorioallantoic Membrane; ME – microemulsion; NR – neutral red; NZW – New Zealand White; OECD – Organisation for Economic Co-operation and Development; REET – rabbit enucleated eye test; SIRC – Statens Seruminstitut rabbit cornea cells
